Benchmarking in the Process Industries Munir Ahmad, Roger Benson, 1999 Aimed at introducing the subject of benchmarking to the process industries this book is based on practical experience of over 2000 process plants It provides guidance on how to benchmark where to find the benchmarks how to quantify the gaps intended and suggests the impact of improving manufacturing in the process industries This book provides the framework measures and industry world class targets to allow organizations to maximise its potential *Sustainable Rural Transformation Through Agro-Industries* U.K. Srivastava, Pramila Srivastava, 2018-01-01 Indian economy is undergoing structural changes The share of agriculture and allied activities in GDP has declined over the years On farm Jobs are diminishing or stagnant There is a need to generate off farm jobs through secondary and tertiary processing of agriculture crop horticulture animal husbandry fisheries forest produce raw material and these are not increasing to keep pace with the needs despite potential In India more than 75% of agro processing is done by informal and small enterprises But most informal and small unit suffer from market and technology constraints Therefore they cannot go for higher value addition from the main products and from the by products These informal and small enterprises are not in a position to create an integrated value chain which can have links with the farmers As technology is outmoded these units are not in a position to give quality assurance and meet food safety standards Their products are marketed only in less demanding nearby local markets World over there is transition from informal and small agro industrial enterprises to large units which are competitive in terms of price and quality equitable not exploiting any member of value chain and inclusive treating farmers as strategic business partners rather than adversaries They use latest and innovative technology and have national and international markets for selling their products They enjoy scale economies are able to comply with national and international standards of quality assurance and go for higher level of value addition They can forge linkages with the farmers through contract farming and direct procurement and assure their raw material supply by treating the farmers as strategic business partners But these enterprises require the enabling conditions which make it possible to run the enterprises profitably along with transformation of rural areas Over the years the Government of India and nearly all the State Governments have now created most attractive enabling environment Therefore in our assessment India is poised for a great leap in investments in food processing and marketing The book contains 18 chapters dealing with the entire project cycle of agro industries for sustainable rural transformation The most insightful part is the 12 real life case studies The book would be useful to agro entrepreneurs agro processing industries policy makers bankers management consultants students of agriculture universities cooperative management training institutions and MBA students **Supervision in the Hospitality Industry** John R. *Innovation and Industry Evolution* David B. Audretsch, 1995 It once took two decades to replace one third of the Fortune 500 now a subset of new firms are challenging and displacing this elite group at a breathtaking rate while armies of startups come and go within just a few years Most new jobs are in fact coming from small firms reversing the trend of a century David Audretsch takes a close look at the U S economy in motion providing a detailed and systematic investigation of the dynamic process by which industries and firms enter into markets either grow and survive or disappear He shapes a clear understanding of the role that small entrepreneurial firms play in this evolutionary process and in the asymmetric size distribution of firms in the typical industry Audretsch introduces the large longitudinal database maintained by the U S Small Business Administration that is used to identify the startup of new firms and track their performance over time He then provides different snapshots of the process of industries in motion why new firm startup activity varies so greatly across industries what happens to these firms after they enter the market the extent to which entrepreneurial firms account for an industry s economic activity and why that measure varies across industries how small firms compensate for size related disadvantages and who exits and why Audretsch concludes that the structure of industries is characterized by a high degree of fluidity and turbulence even as the patterns of evolution vary considerably from industry to industry The dynamic process by which firms and industries evolve over time is shaped by three fundamental factors technology scale economies and demand Most important the evidence suggests that it is the differences in the knowledge conditions and technology underlying each specific industry key elements in innovation that are responsible for the pattern particular to that industry
