This capability relies on a successful strategy that integrates *Internet of Things and Access Control* Shantanu Pal, 2021-01-27 This book presents the design and development of an access control architecture for the Internet of Things (IoT) systems. It considers the significant authentication and authorization issues for large scale IoT systems, in particular the need for access control, identity management, delegation of access rights and the provision of trust within such systems. It introduces a policy based access control approach for the IoT that provides fine grained access for authorized users to services while protecting valuable resources from unauthorized access. Further the book discusses an identity less asynchronous and decentralized delegation model for the IoT leveraging the advantage of blockchain technology. It also presents an approach of attribute based identity and examines the notion of trust in an IoT context by considering the uncertainty that exists in such systems. Fully explaining all the techniques used, the book is of interest to engineers, researchers and scientists working in the field of the wireless sensor networks, IoT systems and their access control management. **Handbook of Risk and Crisis**

Communication Robert L. Heath, H. Dan O'Hair, 2020-10-28 The Handbook of Risk and Crisis Communication explores the scope and purpose of risk and its counterpart crisis to facilitate the understanding of these issues from conceptual and strategic perspectives. Recognizing that risk is a central feature of our daily lives found in relationships, organizations, governments, the environment and a wide variety of interactions, contributors to this volume explore such questions as: What is likely to happen to whom and with what consequences? To what extent can science and vigilance prevent or mitigate negative outcomes? What obligation do some segments of local, national and global populations have to help other segments manage risks? Shedding light on the issues in the quest for definitive answers, The Handbook offers a broad approach to the study of risk and crisis as joint concerns. Chapters explore the reach of crisis and risk communication, define and examine key constructs and parse the contexts of these vital areas. As a whole, the volume presents a comprehensive array of studies that highlight the standard principles and theories on both topics, serving as the largest effort to date focused on engaging risk communication discussions in a comprehensive manner. Now available in paperback, the Handbook of Risk and Crisis Communication can be readily used in graduate coursework and individual research programs. With perspectives from psychology, sociology, anthropology, political science, economics and communication, the Handbook provides vital insights

for all disciplines studying risk and is required reading for scholars and researchers investigating risk and crisis in various contexts

Trust Management Paddy Nixon, Sotirios Terzis, 2003-08-03 iTrust is an Information Society Technologies IST working group which started on 1st of August 2002. The working group is being funded as a concerted action thematic network by the Future and Emerging Technologies FET unit of the IST program. The aim of iTrust is to provide a forum for cross disciplinary investigation of the application of trust as a means of establishing security and confidence in the global computing infrastructure, recognizing trust as a crucial enabler for meaningful and mutually beneficial interactions. The proposed forum is intended to bring together researchers with a keen interest in complementary aspects of trust from technology oriented disciplines and the fields of law, social sciences and philosophy. Hence providing the consortium participants and the research communities associated with them with the common background necessary for advancing toward an in depth understanding of the fundamental issues and challenges in the area of trust management in open systems. Broadly the initiative aims to facilitate the cross disciplinary investigation of fundamental issues underpinning computational trust models by bringing together expertise from technology oriented sciences, law, philosophy and social sciences. Facilitate the emergence of widely acceptable trust management processes for dynamic open systems and applications. Facilitate the development of new paradigms in the area of dynamic open systems which effectively utilize computational trust models. Help the incorporation of trust management elements in existing standards.
