Fibres and Their Composites Erich Fitzer,2012-12-06 The proper choice of technology is a complex decision particularly for developing countries as it depends not only on local needs and conditions but also importantly on the national political context and increasingly on the international environment This technological choice carries with it the genetic code of the nation s future development Many developing countries which lack the needed infrastructure do not have real options others with a reservoir of scientific and engineering skills and explicit SIT strategies can indeed choose between alternatives Turning to the technologies themselves these cover a wide spectrum traditional technologies that are low cost low energy and often better suited to meet basic needs more sophisticated technologies which are highly knowledge intensive and require large capital outlays for research product design and manufacturing and still others which depend upon a blending of modern technology with traditional methods to create products and processes more suited to local needs Even within the group of advanced technologies there is considerable differentiation and those at the lower end of the product cycle are clearly within reach by the newly industri alizing countries **Natural Fibres and their Composites** Vincenzo

Fiore,2021-04-01 Over the last decades natural fibers have received growing attention as alternatives to synthetic materials for the reinforcement of polymeric composites Their specific properties low price health advantages renewability and recyclability make natural fibers particularly attractive for these purposes Furthermore natural fibers have a CO2 neutral life cycle in contrast to their synthetic counterparts However natural fibers are also widely known to possess several drawbacks such as a hydrophilic nature low and variable mechanical properties poor adhesion to polymeric matrices high susceptibility to moisture absorption and low aging resistance Therefore extensive research has been conducted on natural fiber reinforced composites in the last 20 years In this context this book presents several interesting papers concerning the use of natural fibers for the reinforcement of polymer based composites with a focus on the evaluation of their mechanical performances ballistic properties rheological behavior thermal insulation response and aging resistance in humid or aggressive environments *Plant Fibers, their Composites, and Applications* Jyotishkumar Parameswaranpillai,Suchart
