Optical Networks Debasish Datta, 2022-03-01 Following the emergence of lasers and optical fibers optical networking made its beginning in the 1970s with high speed LANs MANs In the 1980s when the bandwidth of intercity microwave links turned out to be inadequate for digital telephony the technology for single wavelength optical communications using SONET SDH arrived as a saviour to replace the microwave links However single wavelength links couldn't utilize the huge bandwidth 40 THz of optical fibers while the bandwidth demands kept soaring This necessitated the use of wavelength division multiplexing WDM for concurrent transmission over multiple wavelengths increasing the available bandwidth significantly Today optical networking has become an indispensable part of telecommunication networks at all hierarchical levels The book *Optical Networks* provides a graduate level presentation of optical networks capturing the past present and ensuing developments with a unique blend of breadth and depth The book is organized in four parts and three appendices Part I presents an

overview and the enabling technologies in two chapters Part II presents the single wavelength optical networks in three chapters while Part III deals with the various forms of WDM optical networks in four chapters Finally Part IV presents some selected topics in six chapters dealing with a number of contemporary and emerging topics Optical Networks provides a comprehensive all in one text for beginning graduate as well as final year undergraduate students and also allows R D engineers to quickly refresh the basics and then move on to emerging topics The Journal of Electrical Workers and Operators ,1919 *The International Operating Engineer* ,1905 *Exhibiting the Past* Kirk A. Denton,2013-12-31 During the Mao era China s museums served an explicit and uniform propaganda function underlining official Party history eulogizing revolutionary heroes and contributing to nation building and socialist construction With the implementation of the post Mao modernization program in the late 1970s and 1980s and the advent of globalization and market reforms in the 1990s China underwent a radical social and economic transformation that has led to a vastly more heterogeneous culture and polity Yet China is dominated by a single Leninist party that continues to rely heavily on its revolutionary heritage to generate political legitimacy With its messages of collectivism self sacrifice and class struggle that heritage is increasingly at odds with Chinese society and with the state s own neoliberal ideology of rapid paced development glorification of the market and entrepreneurship In this ambiguous political environment museums and their curators must negotiate between revolutionary ideology and new kinds of historical narratives that reflect and highlight a neoliberal present In *Exhibiting the Past* Kirk Denton analyzes types of museums and exhibitionary spaces from revolutionary history museums military museums and memorials to martyrs to museums dedicated to literature ethnic minorities and local history He discusses red tourism a state sponsored program developed in 2003 as a new form of patriotic education designed to make revolutionary history come alive and urban planning exhibition halls which project utopian visions of China s future that are rooted in new conceptions of the past Denton s method is narratological in the sense that he analyzes the stories museums tell about the past and the political and ideological implications of those stories Focusing on official exhibitionary culture rather than alternative or counter memory Denton reinserts the state back into the discussion of postsocialist culture because of its centrality to that culture and to show that state discourse in China is neither monolithic nor unchanging The book considers the variety of ways state museums are responding to the dramatic social technological and cultural changes China has experienced over the past three decades
