Radiation Carcinogenesis John D. Boice,1984 **VOLUME 26: RADIATION CARCINOGENESIS: EPIDEMIOLOGY AND BIOLOGICAL SIGNIFICANCE.** JD BOICE (JR., Ed),1984 **The Pathobiology of Neoplasia** A.E. Sirica,2012-12-06

This book is directed primarily to advanced graduate and medical students postdoctoral trainees and established investigators having basic research interests in neoplasia Its content is based in part on the lecture outlines and selected histopathology laboratory components of an advanced course entitled The Pathobiology of Experimental Animal and Human Neoplasia developed by me for the Experimental Pathology Curriculum of the Department of Pathology at the Medical College of Virginia In this regard an effort has been made to integrate pathology with carcinogenesis genetics biochemistry and cellular and molecular biology in order to present a comprehensive and current view of the neoplastic process For focus emphasis is mainly being placed on the neoplastic cells themselves and not on associated host mediated responses It is hoped that this book will accomplish its purpose of providing students and researchers who already possess strong but diverse basic science backgrounds with unifying concepts in tumor pathobiology so as to stimulate new research aimed at furthering our understanding of neoplastic disease I wish to express my appreciation and heartfelt thanks to the authors whose individual ranges of expertise and research experience clearly bring to their respective chapters unique perspectives that easily transcend any redundancy that may be present In addition I am grateful to Drs George Vennart Saul Kay and Fred Meier and to Ms Connie Wilkerson of the Department of Pathology at MCV for their helpful comments and their review of some of the material *JNCI, Journal of the National Cancer Institute* National Cancer Institute (U.S.),1987 *Journal of the National Cancer Institute* ,1993 *Introduction To Radiobiology* Maurice Tubiana,2005-10-10 This textbook covers many aspects of radiation radiotherapy and their effects It includes a discussion of recent advances such as the molecular basis of cellular effects and cell radiosensitivity radiocarcinogenesis and how radiotherapy can affect normal and neoplastic tissues

Introduction to Radiobiology J. Dutreix,A. Wambersie,1990-09-01 This textbook covers all aspects of radiation radiotherapy and their effects The book initially published in France has been updated and expanded in this English version It includes a thorough discussion of recent advances such as a better understanding of the molecular basis of cellular effects and cell radiosensitivity There is a study of the mechanism by which dose and overall duration of radiotherapy can introduce differential effects between normal and neoplastic tissues and recent data on radiocarcinogenesis in man and experimental animals is provided *Energy Research Abstracts* ,1986 Molecular Carcinogenesis and the Molecular Biology of Human Cancer David Warshawsky,Joseph R. Landolph Jr.,2005-10-31 To gain a complete overview of what is presently known about molecular carcinogenesis would prove to be a very daunting task for those not already steeped in this complex subject Providing an in depth summary of the molecular aspects of carcinogenesis this text comprehensively covers chemical radiation and viral carcinogenesis from animal and human test data to metabolism and DNA binding It covers

organic and metal carcinogenesis related to lung breast prostate skin liver colon brain and thyroid cancers The book explores the human implications of data regarding oncogenesis of transgenic and knockout mice and rats It also covers the genomics and proteomics of chemoprevention risk and exposure assessments and regulation of carcinogens Molecular Carcinogenesis and the Molecular Biology of Human Cancer is an ideal text for graduate courses in cancer The Report of the Human Health Subcommittee United States. Hallenbeck,2018-12-20 Many individuals and groups need a usable treatment of the methodology required to assess the human health risks caused by toxicant exposure This need is shared by industrial hygienists environmental occupational and public health professionals toxicologists epidemiologists labor unions attorneys regulatory officials and manufacturers and users of chemicals The reader needs only a basic knowledge of biology and algebra in order to utilize the methodology presented In addition a basic knowledge of toxicology epidemiology and statistics is desirable for a full understanding of some aspects of risk assessment Sophisticated computer programs are not required All the computations can be carried out with a pocket calculator Environmental Standards Christian Streffer,Josef Bückner,Adrienne Cansier,Dieter Cansier,Carl Friedrich Gethmann,Robert Guderian,Gerd Hanekamp,Dietrich Henschler,Gerald Pösch,Eckard Reh binder,Ortwin Renn,Marco Slesina,Kerstin Wuttke,2013-06-29 The rapid growth of the world population nearly six fold over the last hundred years combined with the rising number of technical installations especially in the industrialized countries has led to ever tighter and more strained living spaces on our planet Because of the inevitable processes of life man was at first an exploiter rather than a careful preserver of the environment Environmental awareness with the intention to conserve the environment has grown only in the last few decades Environmental standards have been defined and limit values have been set largely guided however by scientific and medical data on single exposures while public opinion on the other hand now increasingly calls for a stronger consideration of the more complex situations following combined exposures Furthermore it turned out that environmental standards while necessarily based on scientific data must also take into account ethical legal economic and sociological aspects A task of such complexity can only be dealt with appropriately in the framework of an interdisciplinary group Late Sequelae in Oncology Jürgen Dunst,Rolf Sauer,2012-12-06 Increasing survival figures and the use of more intense combined treatment regimens in modern oncology have raised the problem of late therapeutic sequelae in long term survivors after cancer Recent scientific approaches to late sequelae concentrate on the evaluation of subclinical changes with sophisticated functional measurements and experimental investigation of the underlying pathophysiological mechanisms The objective of the book is to bring together these recent clinical and experimental data from different medical disciplines to give an overview of the most relevant problems of late sequelae In clinical practice the book may help regarding estimation of risks selection of diagnostic methods and estimation
