Radiation Research A Twentieth Century Perspective Volume I Congress Abstracts:

Radiation Research: A Twentieth-century Perspective J Champan, 2012-12-02 Radiation Research A Twentieth Century Perspective Volume I Congress Abstracts is a collection of abstracts presented at the Ninth International Congress of Radiation Research convened in Toronto Canada organized by the Radiation Research Society and the North American Hyperthermia Group at the invitation of the International Association of Radiation Research The Toronto venue for this congress recognizes a major role by Canadian scientists in the field of radiation research and also the strong participation of Canadian scientists in the North American Radiation Research Society Original science is shared at these Congresses through Congress lectures symposia presentations and proffered papers The Congress Board of Directors adopted a proposal that all abstracts of scientific presentations should become a permanent record of the official proceedings of the Congress In a manner somewhat analogous to the Canadian postal code system each abstract in this volume is identified at the top left hand corner by a code consisting of both letters and numbers printed on three lines Line one consists of one letter and two numbers that uniquely identify each scientific event The second line consists of a double digit number that designates the sequence of presentation within the specific scientific event The third line consists of a double letter code in which the first letter indicates the day of the week on which abstract material is presented and or discussed and the second letter indicates a morning or afternoon session

AFRRI's Gamma-ray, X-ray, and Fission-neutron Calibration Curves for the Lymphocyte Dicentric Assay P. G. S. Prasanna, 2002 Facilities are established at the Armed Forces Radiobiology Research Institute AFRRI to perform radiation induced chromosome aberration analysis for biological dosimetry Whole blood from healthy human volunteers was used after obtaining informed consent Peripheral blood lymphocytes were exposed in vitro to different types of radiation sup 60 Co gamma rays E gamma 1 25 MeV mean of the absorbed dose distribution of the lineal energy $y_{sub D} 1.9$ keV micrometers 1 Gy min x rays 250 kV sub p E 83 keV $y_{sub D} 4$ keV micrometers 1 Gy min or a fission spectrum neutron source E 0.71 MeV $y_{sub D} 65$ keV micrometers 0.25 Gy min Distribution of radiation induced dicentrics among cells exhibited Poisson statistics as characterized by the Papworth method Papworth 1970 Dose response relationships for the yield of dicentrics for photon sources were fitted with a linear quadratic model using the maximum likelihood method and for the neutron source by a weighted linear regression method Comparison of the data with other published studies is presented The dose response relationships for dicentric induction by low and high linear energy transfer LET radiation are consistent with the single and

two track model of aberration formation $Y = \alpha D + \beta D^2$ An increase in y sub D resulted in an increase in dicentric yield As expected fission neutrons induced a significantly higher yield of dicentric than that caused by low LET sources The linear component of the model corresponding to damage caused by single tracks is predominant with fission neutrons so that the dose effect relationship is essentially linear An automated metaphase finder system with a satellite scoring utility was used to improve data collection
