The Structure of Scientific Revolutions Jo Hedesan, Joseph Tendler, 2017-07-05 Thomas Kuhn's *The Structure of Scientific Revolutions* can be seen without exaggeration as a landmark text in intellectual history In his analysis of shifts in scientific thinking Kuhn questioned the prevailing view that science was an unbroken progression towards the truth Progress was actually made he argued via paradigm shifts meaning that evidence that existing scientific models are flawed slowly accumulates in the face at first of opposition and doubt until it finally results in a crisis that forces the development of a new model This development in turn produces a period of rapid change extraordinary science Kuhn terms it before an eventual return to normal science begins the process whereby the whole cycle eventually repeats itself This portrayal of science as the product of successive revolutions was the product of rigorous but imaginative critical thinking It was at odds with science's self image as a set of disciplines that constantly evolve and progress via the process of building on existing knowledge Kuhn's highly creative reimagining of that image has proved enduringly influential and is the direct product of the author's ability to produce a novel explanation for existing evidence and to redefine issues so as to see them in new ways

The Scientific Revolution Revisited Mikuláš Teich, 2015-04-20 *The Scientific Revolution Revisited* brings Mikul Teich back to the great movement of thought and action that transformed European science and society in the seventeenth century Drawing on a lifetime of scholarly experience in six penetrating chapters Teich examines the ways of investigating and understanding nature that matured during the late Middle Ages and the Renaissance charting their progress towards science as we now know it and insisting on the essential interpenetration of such inquiry with its changing social environment The Scientific Revolution was marked by the global expansion of trade by European powers and by interstate rivalries for a stake in the developing world market in which advanced medieval China remarkably did not participate It is in the wake of these happenings in Teich's original retelling that the Thirty Years War and the Scientific Revolution emerge as products of and factors in an uneven transition in European and world history from natural philosophy to modern science feudalism to capitalism the late medieval to the early modern period With a narrative that moves from pre classical thought to the European institutionalisation of science and a scope that embraces figures both lionised and neglected such as Nicole Oresme Francis Bacon Thomas Hobbes Isaac Newton Ren Descartes Thaddeus Hagecius Johann Joachim Becher *The Scientific Revolution Revisited* illuminates the social and intellectual sea changes that shaped the modern world

The Scientific Revolution in Global Perspective William E. Burns, 2016 This is the first book to put the scientific revolution its causes and effects in a global context It breaks

with the Eurocentric tradition of previous scientific revolution surveys to fully reimagine the emergence of modern science as a process on a world scale It has maps that for the first time situate the scientific revolution geographically Provided by publisher **An Analysis of Thomas Kuhn's The Structure of Scientific Revolutions** Jo Hedesan, Joseph

Tendler, 2017-07-05 Thomas Kuhn's *The Structure of Scientific Revolutions* can be seen without exaggeration as a landmark text in intellectual history In his analysis of shifts in scientific thinking Kuhn questioned the prevailing view that science was an unbroken progression towards the truth Progress was actually made he argued via paradigm shifts meaning that evidence that existing scientific models are flawed slowly accumulates in the face at first of opposition and doubt until it finally results in a crisis that forces the development of a new model This development in turn produces a period of rapid change extraordinary science Kuhn terms it before an eventual return to normal science begins the process whereby the whole cycle eventually repeats itself This portrayal of science as the product of successive revolutions was the product of rigorous but imaginative critical thinking It was at odds with science's self image as a set of disciplines that constantly evolve and progress via the process of building on existing knowledge Kuhn's highly creative reimagining of that image has proved enduringly influential and is the direct product of the author's ability to produce a novel explanation for existing evidence and to redefine issues so as to see them in new ways **Encyclopedia of the Scientific Revolution** Wilbur

Applebaum, 2003-12-16 With unprecedented current coverage of the profound changes in the nature and practice of science in sixteenth and seventeenth century Europe this comprehensive reference work addresses the individuals ideas and institutions that defined culture in the age when the modern perception of nature of the universe and of our place in it is said to have emerged Covering the historiography of the period discussions of the Scientific Revolution's impact on its contemporaneous disciplines and in depth analyses of the importance of historical context to major developments in the sciences The *Encyclopedia of the Scientific Revolution* is an indispensable resource for students and researchers in the history and philosophy of science **Early Modern Color Worlds** , 2016-09-07 Color has recently become the focus of

scholarly discussion in many fields but the categories of art craft science and technology unreflectively defined according to modern disciplines have not been helpful in understanding color in the early modern period Color worlds consisting of practices concepts and objects form the central category of analysis in this volume The essays examine a rich variety of color worlds and their constituent engagements with materials productions and the ordering and conceptualization of color Many color worlds appear to have intersected and cross fertilized at the beginning of the seventeenth century the essays focus especially on the creation of color languages and boundary objects to communicate across color worlds or indeed when and why this failed to happen Contributors include Tawrin Baker Barbara H Berrie Fokko Jan Dijksterhuis Karin Leonhard Andrew Morrall Doris Oltrogge Valentina Pugliano Anna Marie Roos Romana Sammern Filzmoser and Simon Werrett

The Anatomical Renaissance Andrew Cunningham, 2016-12-05 The central proposition of this book is that the great

anatomists of the Renaissance from Vesalius to Fabricius and Harvey the forebears of modern scientific biology and medicine consciously resurrected not merely the methods but also the research projects of Aristotle and other Ancients The Moderns choice of topics and subjects their aims and their evaluation of their investigations were all made in a spirit of emulation not rejection of their distant predecessors First published in 1997 Andrew Cunningham s masterly analysis of the history of the scientific renaissance a history not of things found but of projects of enquiry provoked a reappraisal of the intellectual roots of the Renaissance as well as illuminating debates on the history of the body and its images *Italy in the Seventeenth Century* Domenico Sella,2014-06-17 In his comprehensive overview of 17th century Italy Professor Sella challenges the old view that Italy was in general decline instead he shows it to have been a time of sharp contrasts and shifts in fortune He starts with a balanced and critical analysis of political developments placing the Italian states in their wider European context before assessing the state of the economy He then looks in depth at society religion and culture and science and in particular reassesses the influence of the Counter Reformation on Italian life His book ends with an engrossing account of the life and work of Galileo as well as an overview of the important and often neglected contributions made by other scientists in the later part of the century This rich and balanced volume is an ideal introduction to early modern Italy and provides a critical revaluation of a much misunderstood period in the country s history Scientific Method Barry Gower,2012-10-12 The central theme running throughout this outstanding new survey is the nature of the philosophical debate created by modern science s foundation in experimental and mathematical method More recently recognition that reasoning in science is probabilistic generated intense debate about whether and how it should be constrained so as to ensure the practical certainty of the conclusions drawn These debates brought to light issues of a philosophical nature which form the core of many scientific controversies today *Scientific Method A Historical and Philosophical Introduction* presents these debates through clear and comparative discussion of key figures in the history of science Key chapters critically discuss Galileo s demonstrative method Bacon s inductive method and Newton s rules of reasoning the rise of probabilistic Bayesian methods in the eighteenth century the method of hypotheses through the work of Herschel Mill and Whewell the conventionalist views of Poincaré and Duhem the inductivism of Peirce Russell and Keynes Popper s falsification compared with Reichenbach s enumerative induction Carnap s scientific method as Bayesian reasoning The debates are brought up to date in the final chapters by considering the ways in which ideas about method in the physical and biological sciences have affected thinking about method in the social sciences This debate is analyzed through the ideas of key theorists such as Kuhn Lakatos and Feyerabend **Tools, Techniques, and Technologies** Laurence Totelin,Emma Perkins,2025-09-14 Ancient scholars deployed innovative tools and techniques both material e g sundials and astrolabes and literary or rhetorical to interrogate and communicate knowledge of the natural world in fields such as astronomy botany medicine Exploring these tools and techniques of ancient science as well as their legacies this volume brings together scholarship from diverse

subjects and periods to celebrate the eminent historian of science Liba Taub Professor of History and Philosophy of Science at the University of Cambridge and Director and Curator of the Whipple Museum of the History of Science Building on Liba Taub's diverse interests in ancient science and mathematics as well as scientific instruments and genres the papers in this volume explore the ways in which practitioners in the ancient world utilised diverse strategies techniques and technologies to develop natural knowledge and procure authority contributing to the legacies of ancient science into the modern world With its attention to both abstract historiographical concepts and concrete examples of tools and techniques this volume will appeal to those interested in the cultural transmission of ideas across time space and genre **Birth of a New Physics**

Bernard Cohen,1985 Relates man's search from the sixteenth century to the present for a physics to describe the dynamics of a universe in motion **The Laws of History** Graeme Snooks,2002-09-26 In this unorthodox and trail blazing work Graeme

Snooks argues that it is possible to construct a scientific theory of human history but only if we adopt a radically materialist theory of human nature Beyond Mechanism Brian G. Henning,Adam Scarfe,2013-02-01 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences **World History** Steven Wallech,Touraj Daryaei,Craig Hendricks,Anne

Sauter,2019-01-11 In The Spatial Reformation Michael J Sauter offers a sweeping history of the way Europeans conceived of three dimensional space including the relationship between Earth and the heavens between 1350 and 1850 He argues that

this spatial reformation provoked a reorganization of knowledge in the West that was arguably as important as the religious Reformation. Notably it had its own sacred text which proved as central and was as ubiquitously embraced as Euclid's *Elements*. Aside from the Bible no other work was so frequently reproduced in the early modern era. According to Sauter, its penetration and suffusion throughout European thought and experience call for a deliberate reconsideration not only of what constitutes the intellectual foundation of the early modern era but also of its temporal range. The Spatial Reformation contends that space is a human construct that is it is a concept that arises from the human imagination and gets expressed physically in texts and material objects. Sauter begins his examination by demonstrating how Euclidean geometry when it was applied fully to the cosmos estranged God from man, enabling the breakthrough to heliocentrism and by extension the discovery of the New World. Subsequent chapters provide detailed analyses of the construction of celestial and terrestrial globes, Albrecht Dürer's engraving *Melencolia*, the secularization of the natural history of the earth and man, and Hobbes's rejection of Euclid's sense of space and its effect on his political theory. Sauter's exploration culminates in the formation of a new anthropology in the eighteenth century that situated humanity in reference to spaces and places that human eyes had not actually seen. The Spatial Reformation illustrates how these disparate advancements can be viewed as resulting expressly from early modernity's embrace of Euclidean geometry.

Insiders and Outsiders in Seventeenth-Century Philosophy G.A.J. Rogers, Tom Sorell, Jill Krayer, 2009-10-28. Seventeenth century philosophy scholars come together in this volume to address the Insiders: Descartes, Spinoza, Leibniz, Locke, and Hobbes, and Outsiders: Pierre Gassendi, Kenelm Digby, Theophilus Gale, Ralph Cudworth, and Nicholas Malebranche of the philosophical canon and the ways in which reputations are created and confirmed. In their own day these ten figures were all considered to be thinkers of substantial repute and it took some time for the Insiders to come to be regarded as major and original philosophers. Today these Insiders all feature in the syllabi of most history of philosophy courses taught in western universities and the papers in this collection contrasting the stories of their receptions with those of the Outsiders give an insight into the history of philosophy which is generally overlooked.

Shaping World History Mary Kilbourne Matossian, 2016-07-01. This innovative survey of world history from earliest times to the present focuses on the role of four factors in the development of humankind: climate, communication, and transportation technology, scientific advances, and the competence of political elites. Matossian moves chronologically through fifteen historic periods showing how one or more of the causative factors led to significant breakthroughs in human history. *Shaping World History* is based on original research and also draws widely from the literature on the history of science, technology, climate, agriculture, and historical epidemiology. This compelling analysis is presented in a personal style and includes reflections on how things work and why they are important.
