Measurement for the Social Sciences John R. Rossiter, 2010-11-25 This book proposes a revolutionary new theory of construct measurement called C OAR SE for the social sciences The acronym is derived from the following key elements construct definition object representation attribute classification rater entity identification selection of item type enumeration and scoring The new theory is applicable to the design of measures of constructs in Management Marketing Information Systems Organizational Behavior Psychology Sociology C OAR SE is a rationally rather than empirically based theory and procedure It can be used for designing measures of the most complex and also the most basic constructs that we use in social science research C OAR SE is a radical alternative to the traditional empirically based

psychometric approach and a considerable amount of the book's content is devoted to demonstrating why the psychometric approach does not produce valid measures. The book argues that the psychometric approach has resulted in many misleading findings in the social sciences and has led to erroneous acceptance or rejection of many of our main theories and hypotheses and that the C-OAR-SE approach to measurement would correct this massive problem. The main purpose of this book is to introduce and explain C-OAR-SE construct measurement theory in a way that will be understood by all social science researchers and that can be applied to designing new more valid measures. Featuring numerous examples, practical applications, end-of-chapter questions, and appendices, the book will serve as an essential resource for students and professional researchers alike.

Handbook of Human Intelligence Robert J. Sternberg, 1982-12-30 Gender Linda Brannon, 2002 A balanced approach to the gender course providing research related to both men and women's issues and encouraging critical thinking about topics that are relevant to all people. This book examines the topic of gender, the behaviours and attitudes that relate but are not entirely congruent with biological sex. Research and scholarship form the basis of this book, providing the material for a critical review and an attempt at an overall picture of gender from a psychological perspective. To accent the relevance of research findings in vivid detail, Brannon supplements the review of scholarly research with personal narrative accounts of gender-relevant aspects of people's lives as well as highlights from a cross-cultural perspective of gender. The personal narrative and diversity highlights help to balance the research-based scholarship with the personal experience of gender.

Introduction to Educational Research W. Newton Suter, 2012 W. Newton Suter argues that what is important in a changing education landscape is the ability to think clearly about research methods, reason through complex problems, and evaluate published research. He explains how to evaluate data and establish its relevance.

Handbook of Vocational Psychology W. Bruce Walsh, Mark L. Savickas, Paul J. Hartung, 2013-06-03
Handbook of Vocational Psychology identifies reports and evaluates significant developments in vocational psychology and career counseling and in doing so provides both professional clinicians and students with an informed understanding of both the current state and continuing progress in the field. As in previous editions, the fourth edition links theory and research with the more applied aspects of this field. Four sections cover in order: the field's history, theory, research, and practical applications. Clinicians, students, and academics at all levels of experience will find that the Handbook of Vocational Psychology 4th ed. paints an accurate picture of the realities of work and serves as a practical reference work for anyone interested in keeping up to date with the latest research and trends in vocational psychology.
