Satellites Of Jupiter:

Satellites of Jupiter David Morrison, Mildred Shapley Matthews, 1982 The findings of Voyager have brought Jupiter's moons out from the shadows. Now as much of interest to geologists as to astronomers, these satellites are brought under closer scrutiny by more than 50 international authorities in this volume. Included is research on thermal evolution, surface composition, cratering, time scales, and other subjects, but also key chapters focusing on the satellite Io's volcanic eruptions, thermodynamics, phase composition, and more. These 24 contributions constitute a reference that will stand as the decade's definitive work on Jupiter's satellites and a springboard to further hypotheses.

The Cosmos Jay M. Pasachoff, Alex Filippenko, 2013-08-12 An exciting introduction to astronomy, the fourth edition of this book uses recent discoveries and stunning photography to inspire non-science majors about the Universe. Written by two highly experienced and engaging instructors, each chapter has been fully updated with more than 200 new images throughout, including recent images from space missions and the world's best observatories. The newly redesigned text is organized as a series of stories, each presenting the history of the field, the observations made, and how they fit within the process of science, our current understanding, and what future observations are planned. Math is provided in boxes and easily read around, making the book suitable for courses taking either mathematical or qualitative approaches. New discussion questions encourage students to think widely about astronomy and the role science plays in our everyday lives, and podcasts for each chapter aid studying and comprehension.

Galileo and Satellite Navigation Alessandro De Angelis, 2024-12-26 This book explores the Galilean method for geolocation, placing it in historical and astronomical context. It bridges the techniques developed by the Greeks and medieval astronomers with later innovations like precision clocks, 20th-century wireless technology, and space-based navigation. The primary source is the twenty-volume National Edition of the Works of Galileo published 1890-1909 by Antonio Favaro, and the update edited by Michele Camerota and Patrizia Ruffo in 2019, which includes previously unpublished documents on Galileo's negotiations with the Spanish government for selling his longitude-determining method at sea. This book inspired the 2024 International Research Day in the World focused on geolocation, organized by the Italian Permanent Delegation to International Organizations in Paris. In collaboration with Museo Galileo in Florence and Sorbonne University, the event featured the exhibition Galileo and Satellite Navigation, showcased at the Pierre et Marie Curie Campus in Paris (June 13-28, 2024) and later at the Italian Institutes of Culture in Prague and Amsterdam, and at the Perimeter Institute in Waterloo, Canada.
