Magellan Moon:

The Earth and the Moon Linda T. Elkins-Tanton, 2006 Compares the Earth equally with other planets to display the similarities and differences between the various orbiting bodies This volume discusses the fundamental aspects of the Earth as a planet It also covers the evolution of the moon in relation to the geological features of the Earth **Ultra** Amy Johnson, 2016-07-06 Commander Conrad of the US Naval intelligence is dispatched on a top priority mission to Scotland near Moray Firth Two RAF Jets on a routine exercise over the North Sea have crashed near Moray Firth At the same time a weather balloon unknown to some carrying sensitive military information has also crashed near Moray Firth Conrad has to locate the witnesses to both the incidents so that they could be sworn to secrecy The book deals with both a critical RAF crash and visitors from space of great relevance to our times Ultra is a hyper intelligent being who lands with surety in Scotland As Conrad conducts his search he begins to suspect that someone is peddling him to a kind of fin de siècle to search for the impossible Conrad is acutely aware of NASA programmes for alien life on other planets and as a child he had read the exploration of space which painted an optimistic picture of our future expansion into the Universe The stars are not for man was something he had heard recanted often He had heard of UFO encounters and hundred per cent of them were dismissed as nonsense He however had been a great fan of The War of the Worlds despite the fact that SETI the search for Extra Terrestrial Intelligence had discovered nothing remotely resembling intelligence Orson Welles too had dismissed all the hype since the beginning of the 20th century when flying saucers had first been reported and Timothy Good and Nick Pope had provided no new evidence of their existence after the UFO files were declassified Amidst all his ponderings from his witnesses of the crash at both sites that a UFO had caused the crash Conrad soon realises that he too is being hunted by some unknown lethal force that what he was told of the incidents was only one part of an unbelievable story From Washington to London to Edinburgh to Moray Firth the story unfolds when Conrad meets Ultra who with precision accuracy reveals earth's past and an unusual cosmic alliance begins to form *The Moon* David Schunk, Burton Sharpe, Bonnie L. Cooper, Madhu Thangavelu, 2007-11-27 This extraordinary book details how the Moon could be used as a springboard for Solar System exploration It presents a realistic plan for placing and servicing telescopes on the Moon and highlights the use of the Moon as a base for an early warning system from which to combat threats of near Earth objects A realistic vision of human development and settlement of the Moon over the next one hundred years is presented and the author explains how global living standards for the Earth can be enhanced through the use of lunar based generated solar power From that beginning the people of the Earth would evolve into a spacefaring civilisation **Through the Daemon's Gate** Dean Swinford, 2006 This book tells the story of the early modern astronomer Johannes Kepler's *Somnium* which has been regarded by science historians and literary critics alike as the first true example of science fiction Kepler began writing his complex and heavily footnoted tale of a fictional Icelandic astronomer as an undergraduate and added to it throughout his life

The *Somnium* fuses supernatural and scientific models of the cosmos through a satirical defense of Copernicanism that features witches, lunar inhabitants and a daemon who speaks in the empirical language of modern science. Swinford looks at the ways that Kepler's *Somnium* is influenced by the cosmic dream, a literary genre that enjoyed considerable popularity among medieval authors including Geoffrey Chaucer, Dante, John of Salisbury, Macrobius and Alan of Lille. He examines the generic conventions of the cosmic dream, also studying the poetic and theological sensibilities underlying the categories of dreams formulated by Macrobius and Artemidorus that were widely used to interpret specific symbols in dreams and to assess their overall reliability. Swinford develops a key claim about the form of the *Somnium* as it relates to early science: Kepler relies on a genre that is closely connected to a Ptolemaic or earth-centered model of the cosmos as a way of explaining and justifying a model of the cosmos that does not posit the same connections between the individual and the divine that are so important for the Ptolemaic model. In effect, Kepler uses the cosmic dream to describe a universe that cannot lay claim to the same correspondences between an individual's dream and the order of the cosmos understood within the rules of the genre itself. To that end, Kepler's *Somnium* is the first example of science fiction but the last example of Neoplatonic allegory.

Planetary Landscapes R. Greeley, 2013-04-17 The objective of this book is to introduce the surface of the objects in the Solar System, the individual treatment features of the planets and satellites in the context of various among the chapters. For example, it was difficult to decide what to leave out of the chapter on Mars because of the bows and whys of Solar System exploration and so much is known about the surface, whereas data are a review of the primary processes that shape our planet, rather limited for Mercury, Earth and which appear to be important to planetary geology. In addition to introducing the geomorphology of planetary sciences, the remaining chapters describe the geomorphic objects. This book is intended to be a source for the geomorphology of the planets and satellites for which data are obtaining supplemental information. References are cited throughout the text. However, these citations are not exhaustive but rather are given to provide geomorphic processes that are inferred for the development of a springboard for additional literature surveys.

Magellan's Voyage Around the World Charles Edward Nowell,2018-12-02 a fundamental work for anyone who desires both the English version of the story of this path-breaking voyage and an up-to-date evaluation of the scholarly production about the voyage that has appeared during the last four and a half centuries Lewis Hanke Columbia University Today when men orbit the globe in a few minutes it is difficult to imagine the awe that accompanied the news of the three years voyage completing man's first circumnavigation of the earth Wonder and amazement marked the

contemporary accounts of Magellan's hazardous adventure and now the three best accounts have been gathered into one volume and provided with an introduction and commentary based on the most accurate historical information available by an eminent scholar of Hispanic studies. Included are translations of the accounts by Antonio Pigafetta, one of the eighteen actual survivors of the 241 who undertook the voyage by the secretary of Emperor Charles V Maximilian of Transylvania who wrote a long report based on first hand accounts to his father the Cardinal of Salzburg and by Gaspar Correa, a Portuguese historian who twenty years later wrote of the voyage mixing fact with fanciful tales of the Far East. Several of the maps prepared for this edition are in the style of the period and represent conceptions of the world as seen by cartographers and navigators at the beginning of the Age of Discovery.
