Nonlinear Multiobjective Optimization Kaisa Miettinen, 2012-12-06 Problems with multiple objectives and criteria are generally known as multiple criteria optimization or multiple criteria decision making MCDM problems So far these types of problems have typically been modelled and solved by means of linear programming However many real life phenomena are of a nonlinear nature which is why we need tools for nonlinear programming capable of handling several conflicting or incommensurable objectives In this case methods of traditional single objective optimization and linear programming are not enough we need new ways of thinking new concepts and new methods nonlinear multiobjective optimization Nonlinear Multiobjective Optimization provides an extensive up to date self contained and consistent survey review of the literature and of the state of the art on nonlinear deterministic multiobjective optimization its methods its theory and its background The amount of literature on multiobjective optimization is immense The treatment in this book is based on approximately 1500 publications in English printed mainly after the year 1980 Problems related to real life applications often contain irregularities and nonsmoothnesses The treatment of nondifferentiable multiobjective optimization in the literature is rather rare For this reason this book contains material about the possibilities background theory and methods of nondifferentiable multiobjective optimization as well This book is intended for both researchers and students in the areas of applied mathematics engineering economics operations research and management science it is meant for both professionals and practitioners in many different fields of application The intention has been to provide a consistent summary that may help in selecting an appropriate method for the problem to be solved It is hoped the extensive bibliography will be of value to researchers

Optimization on Low Rank Nonconvex Structures Hiroshi Konno, Phan Thien Thach, Hoang Tuy, 2013-12-01 Global optimization is one of the fastest developing fields in mathematical optimization In fact an increasing number of remarkably efficient deterministic algorithms have been proposed in the last ten years for solving several classes of large scale specially structured problems encountered in such areas as chemical engineering financial engineering location and network optimization production and inventory control engineering design computational geometry and multi objective and multi level optimization These new developments motivated the authors to write a new book devoted to global optimization problems with special structures Most of these problems though highly nonconvex can be characterized by the property that they reduce to convex minimization problems when some of the variables are fixed A number of recently developed algorithms have been proved surprisingly efficient for handling typical classes of problems exhibiting such structures namely low rank nonconvex structures Audience The book will serve as a fundamental reference book for all those who are interested in mathematical optimization
