Mathematical Modelling Case Studies And Projects:

Mathematical Modelling J. Caldwell, Douglas K.S. Ng, 2004-03-31 Over the past decade there has been an increasing demand for suitable material in the area of mathematical modelling as applied to science engineering business and management Recent developments in computer technology and related software have provided the necessary tools of increasing power and sophistication which have significant implications for the use and role of mathematical modelling in the above disciplines In the past traditional methods have relied heavily on expensive experimentation and the building of scaled models but now a more flexible and cost effective approach is available through greater use of mathematical modelling and computer simulation In particular developments in computer algebra symbolic manipulation packages and user friendly software packages for large scale problems all have important implications in both the teaching of mathematical modelling and more importantly its use in the solution of real world problems Many textbooks have been published which cover the art and techniques of modelling as well as specific mathematical modelling techniques in specialist areas within science and business In most of these books the mathematical material tends to be rather tailor made to fit in with a one or two semester course for teaching students at the undergraduate or postgraduate level usually the former This textbook is quite different in that it is intended to build on and enhance students modelling skills using a combination of case studies and projects

Product Lifecycle Management (Volume 4): The Case Studies John Stark,2019-05-07 This book presents some twenty case studies showing how companies in different industry sectors and of different sizes make advances in Product Lifecycle Management PLM. Like the author s previous volumes this book provides a valuable resource for those wishing to learn about PLM and how to implement and apply it in their companies. Helping readers to learn about implementing and benefiting from PLM learn about good PLM solutions and best practice improve their planning and decision making abilities benefit from the lessons learned by the companies featured in the case studies proceed faster and further with PLM the book presents effective PLM solutions and best practices. At the same time the case studies included demonstrate how different companies implement and benefit from PLM. Each case study is addressed in a separate chapter and details a different situation enabling readers to put themselves in the situation and think through different actions and decisions. A valuable resource for PLM team managers and employees in engineering and manufacturing companies the book is also of interest to researchers and students in industrial engineering fields.

Mathematical Modelling Education and Sense-making Gloria Ann Stillman,Gabriele Kaiser,Christine Erna Lampen,2020-05-14 This volume documents on going research and theorising in the sub field of mathematics education devoted to the teaching and learning of mathematical modelling and applications. Mathematical

modelling provides a way of conceiving and resolving problems in people's everyday lives as well as sophisticated new problems for society at large. Mathematical modelling and real world applications are considered as having potential for cultivating sense making in classroom settings. This book focuses on the educational perspective researching the complexities encountered in effective teaching and learning of real world modelling and applications for sense making is only beginning. All authors of this volume are members of the International Community of Teachers of Mathematical Modelling (ICTMA), the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace.

Exploring Mathematical Modeling in Biology Through Case Studies and Experimental Activities Rebecca Sanft, Anne Walter, 2020-03-30. Exploring Mathematical Modeling in Biology through Case Studies and Experimental Activities provides supporting materials for courses taken by students majoring in mathematics, computer science or in the life sciences. The book's cases and lab exercises focus on hypothesis testing and model development in the context of real data. The supporting mathematical coding and biological background permit readers to explore a problem, understand assumptions and the meaning of their results. The experiential components provide hands-on learning both in the lab and on the computer. As a beginning text in modeling, readers will learn to value the approach and apply competencies in other settings. Included case studies focus on building a model to solve a particular biological problem from concept and translation into a mathematical form to validating the parameters, testing the quality of the model and finally interpreting the outcome in biological terms. The book also shows how particular mathematical approaches are adapted to a variety of problems at multiple biological scales. Finally, the labs bring the biological problems and the practical issues of collecting data to actually test the model and/or adapting the mathematics to the data that can be collected. Presents a single volume on mathematics and biological examples with data and wet lab experiences suitable for non-experts. Contains three real world biological case studies and one wet lab for application of the mathematical models. Includes R code templates throughout the text which are also available through an online repository along with the necessary data files to complete all projects and labs.

Phase Transformation in Metals Nestor Perez, 2024-12-20. This new edition retains its class-tested explanation of the physics of phase transformation and associated constraints from a metallurgical materials science point of view and adds an enhanced treatment of the underlying theoretical concepts with greater clarification. The new edition continues its examination of crystallography, mass transport by diffusion, thermodynamics, heat transfer and related temperature gradients, thermal deformation and even fracture mechanics. The work presented emphasizes solidification and related analytical models based on heat transfer. This corresponds with the most fundamental physical event of continuous evolution of latent heat of fusion for directional or non-directional liquid to solid phase transformation at a specific interface with a certain geometrical shape.

such as planar or curved front Dr Perez introduces mathematical and engineering approximation schemes for describing the phase transformation mainly during solidification of pure metals and alloys Giving clear definitions and explanations of theoretical concepts and full detail of derivation of formulae this interdisciplinary volume is ideal for graduate and upper level undergraduate students in applied science and professionals in the metal making and surface reconstruction industries
