Blalock, 2013-10-22 Quantitative Sociology International Perspective on Mathematical and Statistical Modeling presents diverse mathematical modeling procedures involving different strategies for understanding sociology This book is organized into three parts encompassing 22 chapters that also describe meta mathematical models suggesting general ways of conceptualizing or expressing phenomena in mathematical or logical languages Part I deals with the diachronic process analysis causation of conditional probabilities and graph theoretical formulations Part II highlights the different fields of applied statistics including experimental designs survey sampling and panel designs multivariate analysis econometrics multiple classification analysis and other approaches to data analysis and measurement This part also treats the elimination of distortions or artifacts of various kinds such as sampling errors or biases stemming from faulty designs measurement errors or incorrectly specified equations Part III explores other mathematical models for a deductive or semiductive system containing axioms definitions and theorems that may then be examined both in terms of internal consistency using mathematical reasoning and their ability to explain real world phenomena This book is of value to sociologists applied and statistical mathematicians and researchers **Sociodynamics** Wolfgang Weidlich, 2006-07-07 Highly recommended This is an important book in putting the burgeoning field of sociodynamics on a solid footing Journal of Artificial Societies and Social Simulation This text deals with general modelling concepts in the social sciences their applications and their mathematical

methods The author's well organized approach offers a clear coherent introduction to terminology approaches and goals in modelling Appropriate for advanced undergraduates and graduate students it requires a solid background in algebra and calculus The three part treatment begins by addressing general modelling concepts the second part provides applications and the third discusses mathematical method Topics include population dynamics group interaction political transitions evolutionary economics and urbanization Guiding students through a series of practical applications that illustrate the methods potential scope the text concludes with a detailed look at mathematical methods

Models and Methods in Social Network Analysis Peter J. Carrington, John Scott, Stanley Wasserman, 2005-02-07 Models and Methods in Social Network Analysis first published in 2005 presents the most important developments in quantitative models and methods for analyzing social network data that have appeared during the 1990s Intended as a complement to Wasserman and Faust's Social Network Analysis Methods and Applications it is a collection of articles by leading methodologists reviewing advances in their particular areas of network methods Reviewed are advances in network measurement network sampling the analysis of centrality positional analysis or blockmodelling the analysis of diffusion through networks the analysis of affiliation or two mode networks the theory of random graphs dependence graphs

exponential families of random graphs the analysis of longitudinal network data graphical techniques for exploring network data and software for the analysis of social networks **Social Mechanisms** Peter Hedström, Richard Swedberg, 1998-01-13

The advancement of social theory requires an analytical approach that systematically seeks to explicate the social mechanisms that generate and explain observed associations between events These essays written by prominent social scientists advance criticisms of current trends in social theory and suggest alternative approaches The mechanism approach calls attention to an intermediary level of analysis in between pure description and story telling on the one hand and grand theorizing and universal social laws on the other For social theory to be of use for the working social scientist it must attain a high level of precision and provide a toolbox from which middle range theories can be constructed
