to have said The laws of nature are written in the language of mathematics Often mathematics and science go hand in hand with one helping develop and improve the other Discoveries in science for example open up new advances in statistics computer science operations research and pure and applied mathematics which in turn enabled new practical technologies and advanced entirely new frontiers of science Despite the interdependency that exists between these two disciplines cooperation and collaboration between mathematical scientists and scientists have only occurred by chance To encourage new collaboration between the mathematical sciences and other fields and to sustain present collaboration the National Research Council NRC formed a committee representing a broad cross section of scientists from academia federal government laboratories and industry The goal of the committee was to examine the mechanisms for strengthening interdisciplinary research between mathematical sciences and the sciences with a strong focus on suggesting the most effective mechanisms of collaboration Strengthening the Linkages Between the Sciences and the Mathematical Sciences provides the findings and recommendations of the committee as well as case studies of cross discipline collaboration the workshop agenda and federal agencies that provide funding for such collaboration   Codes and Association Schemes Alexander Barg,2001 This volume presents papers related to the DIMACS workshop Codes and Association Schemes The articles are devoted to the following topics applications of association schemes and of the polynomial method to properties of codes structural results for codes structural results for association schemes and properties of orthogonal polynomials and their applications in combinatorics Papers on coding theory are related to classical topics such as perfect codes bounds on codes codes and combinatorial arrays weight enumerators and spherical designs Papers on orthogonal polynomials provide new results on zeros and symptotic properties of standard families of polynomials encountered in coding theory The theme of association schemes is represented by new classification results and new classes of schemes related to posets This volume collects up to date applications of the theory of association schemes to coding and presents new properties of both polynomial and general association schemes It offers a solid representation of results in problems in areas of current interest   **Use of Computer Models in Biomedical Research** ,1986   Literature Search National Library of Medicine (U.S.),1986   *Constraint Programming and Large Scale Discrete Optimization* Eugene C.
