P. Levich,1996 Time is considered as an independent entity which cannot be reduced to the concept of matter space or field The point of discussion is the time flow conception of N A Kozyrev 1908 1983 an outstanding Russian astronomer and natural scientist In addition to a review of the experimental studies of the active properties of time by both Kozyrev and modern scientists the reader will find different

interpretations of Kozyrev s views and some developments of his ideas in the fields of geophysics astrophysics general relativity and theoretical mechanics **Constrained Control Problems Of Discrete Processes** Vu Ngoc Phat,1996-11-26 The book gives a novel treatment of recent advances on constrained control problems with emphasis on the controllability reachability of dynamical discrete time systems The new proposed approach provides the right setting for the study of qualitative properties of general types of dynamical systems in both discrete time and continuous time systems with possible applications to some control engineering models Most of the material appears for the first time in a book form The book is addressed to advanced students postgraduate students and researchers interested in control system theory and optimal control **Lecture Notes on the Discretization of the Boltzmann Equation** N. Bellomo,Ren☐e Gatignol,2003 This book presents contributions on the following topics discretization methods in the velocity and space analysis of the conservation properties asymptotic convergence to the continuous equation when the number of velocities tends to infinity and application of discrete models It consists of ten chapters Each chapter is written by applied mathematicians who have been active in the field and whose scientific contributions are well recognized by the scientific community Recent Advances In Elasticity, Viscoelasticity And Inelasticity Kumbakonam R Rajagopal,1995-02-20 This is a collection of papers dedicated to Prof T C Woo to mark his 70th birthday The papers focus on recent advances in elasticity viscoelasticity and inelasticity which are related to Prof Woo s work Prof Woo s recent work concentrates on the viscoelastic and viscoplastic response of metals and plastics when thermal effects are significant and the papers here address open questions in these and related areas *Waves And Stability In Continuous Media - Proceedings Of The Vii Conference* Salvatore Rionero,Tommaso Ruggeri,1994-10-24 This volume presents an up to date overview of some of the most important topics in waves and stability in continuous media The topics are Discontinuity and Shock Waves Linear and Non Linear Stability in Fluid Dynamics Kinetic Theories and Comparison with Continuum Models Propagation and Non Equilibrium Thermodynamics and Numerical Applications *Stability And Time-optimal Control Of Hereditary Systems: With Application To The Economic Dynamics Of The Us (2nd Edition)* Ethelbert Nwakuche Chukwu,2001-12-28 Stability and Time Optimal Control of Hereditary Systems is the mathematical foundation and theory required for studying in depth the stability and optimal control of systems whose history is taken into account In this edition the economic application is enlarged and explored in some depth The application holds out the hope that full employment and high income growth will be compatible with low prices and low inflation provided that the control matrix has full rank i e the existing controls are fully effectively used The book concludes with a new appendix containing complete programs data graphs and quantitative results for the US economy **Mesomechanical Constitutive Modeling** Vratislav Kafka,2001 This carefully written book based to a large degree on original and new research is an essential source of information for anyone dealing with property modeling aspects in modern materials science It can be warmly recommended for graduate students and researchers in the respective fields Ceramics Silikaty 2001 **Mechanical**

**and Thermodynamical Modeling of Fluid Interfaces** Ren⬚e Gatignol,Roger Prud'homme,2001 This book constitutes a comprehensive survey of the balance equations for mass momentum and energy for the interfaces in pure fluids and mixtures Constitutive laws are presented for many situations in engineering science and examples are provided including surface viscosity effects variable surface tension and vapor recoil In addition some extensions of existing theory are given stretch effect in premixed flames relaxation zones downstream two phase shock waves and effective surface tension for steep gradient zones Contents Thermodynamics and Kinematics of Interfaces Interface Balance Laws Constitutive Relations Deduced from Linear Irrevesible Thermodynamics for the Two Dimensional Interfaces Classical Three Dimensional Constitutive Relations Deduced from Linear Irreversible Thermodynamics and Their Consequences for Interfaces Second Gradient Theory Applied to Interfacial Medium Typical Problems Involving Surface Tensions and Other Surface Properties Readership Graduates physicists applied mathematicians and engineers seeking classical knowledge in continuum mechanics and thermodynamics especially in the thermodynamics of irreversible processes *Plates, Laminates, and Shells* T. Lewi?ski,J¢zef Joachim Telega,2000 This book gives a systematic and comprehensive presentation of the results concerning effective behavior of elastic and plastic plates with periodic or quasiperiodic structure One of the chapters covers the hitherto available results concerning the averaging problems in the linear and nonlinear shell models A unified approach to the problems studied is based on modern variational and asymptotic methods including the methods of variational inequalities as well as homogenization techniques Duality arguments are also exploited A significant part of the book deals with problems important for engineering practice such as statical analysis of highly nonhomogeneous plates and shells for which common discretization techniques fail to be efficient assessing stiffness reduction of cracked 0n 900m s laminates and assessing ultimate loads for perfectly plastic plates and shells composed of repeated segments When possible the homogenization formulas are cast in closed form expressions The formulas presented in this manner are then used in constructing regularized formulations of the fundamental optimization problems for plates and shells since the regularization concepts are based on introducing the composite regions for which microstructural properties play the role of new design variables **Dynamical Mechanical Systems Under Random Impulses** Radoslaw Iwankiewicz,1995-11-07 The book presents the methods of analysis of dynamical mechanical systems subjected to stochastic excitations in form of random trains of impulses This particular class of excitations is adequately characterized by stochastic point processes and behaviour of dynamical systems is governed by stochastic differential equations driven by point processes Based on the methods of point processes the analytical techniques are devised to characterize the response of linear and nonlinear mechanical systems as the solutions of underlying stochastic differential equations A number of example problems of engineering importance are also solved such as the vibration of plates and shells and of nonlinear oscillators under random impulses *Impulsive Differential Equations* Dimit?r Ba?nov,Pavel S. Simeonov,1995 The question of the presence of various

asymptotic properties of the solutions of ordinary differential equations arises when solving various practical problems The investigation of these questions is still more important for impulsive differential equations which have a wider field of application than the ordinary ones The results obtained by treating the asymptotic properties of the solutions of impulsive differential equations can be found in numerous separate articles The systematized exposition of these results in a separate book will satisfy the growing interest in the problems related to the asymptotic properties of the solutions of impulsive differential equations and their applications     **Impulsive Differential Equations With A Small Parameter** Drumi D Bainov,Valery Covachev,1994-12-16 This book is devoted to impulsive differential equations with a small parameter It consists of three chapters Chapter One serves as an introduction In Chapter Two regularly perturbed impulsive differential equations are considered Modifications of the method of small parameter the averaging method and the method of integral manifolds are proposed In Chapter Three singularly perturbed differential equations are considered A modification of the method of boundary functions is proposed and asymptotic expansions along the powers of the small parameters of the solutions of the initial value problem the periodic problem and some boundary value problems are found Numerous nonstandard applications to the theory of optimal control are made The application of some other methods to impulsive singularly perturbed equations is illustrated such as the numerical analytical method for finding periodic solutions the method of differential inequalities and the averaging method The book is written clearly strictly and understandably It is intended for mathematicians physicists chemists biologists and economists as well as for senior students of these specialities
