Investigations in Mathematics for Elementary Teachers DeAnn M. Huinker,Eugene F. Krause,1991 *The Classification of Quadrilaterals* Zalman Usiskin,2008-01-01 This monograph reports on an analysis of a small part of the mathematics curriculum the definitions given to quadrilaterals This kind of research which we call micro curricular analysis is often undertaken by those who create curriculum but it is not usually done systematically and it is rarely published Many terms in mathematics education can be found to have different definitions in mathematics books Among these are natural number parallel lines and congruent triangles trapezoid and isosceles trapezoid the formal definitions of the trigonometric functions and absolute value and implicit definitions of the arithmetic operations addition subtraction multiplication and division Yet many teachers and students do not realize there is a choice of definitions for mathematical terms And even those who realize there is a choice may not know who decides which definition of any mathematical term is better and under what criteria Finally rarely are the mathematical implications of various choices discussed As a result many students misuse and otherwise do not understand the role of definition in mathematics We have chosen in this monograph to examine a bit of mathematics for its definitions the quadrilaterals We do so because there is some disagreement in the definitions and consequently in the ways in which quadrilaterals are classified and relate to each other The issues underlying these differences have engaged students teachers mathematics educators and mathematicians There have been several articles and a number of essays on the definitions and classification of quadrilaterals But primarily we chose this specific area of definition in mathematics because it demonstrates how broad mathematical issues revolving around definitions become reflected in curricular materials While we were undertaking this research we found that the area of quadrilaterals supplied grist for broader and richer discussions than we had first anticipated The intended audience includes curriculum developers researchers teachers teacher trainers and anyone interested in language and its use *Mathematics and Teaching* Michele D. Crockett,2008-06 Mathematics and Teaching uses case studies to explore complex and pervasive issues that arise in teaching In this volume school mathematics is the context in which to consider race equity political contexts and the broader social and cultural circumstances in which schooling occurs This book does not provide immediate or definitive resolutions Rather its goal is to provoke and facilitate thoughtful discussion about critical issues for professional decision making in mathematics teaching This is the 7th volume in Reflective Teaching and the Social Conditions of Schooling A Series for Prospective and Practicing Teachers edited by Daniel P Liston and Kenneth M Zeichner It follows the same format as previous volumes in the series Part I includes four case studies of classroom experiences Race and Teacher Expectations Mathematics for All Culture and School

Mathematics and Politics and School Mathematics Each case is followed by a space for readers own reactions and reflections school stakeholders reactions and a summary with additional questions for further discussion Part II presents three public arguments representing different views about the issues that arise in mathematics teaching conservative liberal and radical multiculturalist Part III offers the authors reflections on the centrality of culture in teaching mathematics resources and exercises for further reflection and a bibliography for further reading Mathematics and Teaching is pertinent for all prospective and practicing teachers at any stage in their teaching careers It is appropriate for any undergraduate and graduate course addressing mathematics teaching issues

The Arithmetic Teacher ,1992 Handbook of Effective Inclusive Schools James McLeskey,Fred Spooner,Bob Algozzine,Nancy, L. Waldron,2014-05-16 Over the last decade the educational context for students with disabilities has significantly changed primarily as a result of mandates contained in NCLB and IDEA The purpose of this book is to summarize the research literature regarding how students might be provided classrooms and schools that are both inclusive and effective Inclusive schools are defined as places where students with disabilities are valued and active participants in academic and social activities and are given supports that help them succeed Effectiveness is addressed within the current movement toward multi tiered systems of support and evidence based practices that meet the demands of high stakes accountability
