Mathematics of Computation 1943-1993: A Half-Century of Computational Mathematics Walter Gautschi, 1994 Proceedings of an International Conference held in Vancouver B C August 1993 to commemorate the 50th anniversary of the founding of the journal Mathematics of Computation It consisted of a Symposium on Numerical Analysis and a Minisymposium of Computational Number Theory This proceedings contains 14 invited papers including two not presented at the conference an historical essay on integer factorization and a paper on componentwise perturbation bounds in linear algebra The invited papers present surveys on the various subdisciplines covered by Mathematics of Computation in a historical perspective and in a language accessible to a wide audience The 46 contributed papers address contemporary specialized work Annotation copyright by Book News Inc Portland OR Mathematics of computation 1943-1993: A half-century of computational mathematics B.C. Mathematics of Computation 50th Anniversary Symposium Vancouver, High Performance Computing - HiPC 2006 Yves L. Robert, Manish Parashar, Ramamurthy Badrinath, Viktor K. Prasanna, 2006-12-18 This book constitutes the refereed proceedings of the 13th International Conference on High Performance Computing HiPC 2006 held in Bangalore India December 2006 Coverage in this volume includes scheduling and load balancing network and distributed algorithms application software network services ad hoc networks systems software sensor networks and performance evaluation as well as routing and data management algorithms Algorithmic Number Theory J. P. Buhler, P. Stevenhagen, 2008-10-20 An introduction to number theory for beginning graduate students with articles by the leading experts in the field Advances in Computational Mathematics Zhongving Chen, Yueshen Li, Charles Micchelli, Yuesheng Xu, 2023-08-25 This volume presents the refereed proceedings of the Guangzhou International Symposium on Computational Mathematics held at the Zhongshan University People's Republic of China Nearly 90 international mathematicians examine numerical optimization methods wavelet analysis computational approximation numerical solutions of differential and integral equations numerical linear algebra inverse and ill posed problems geometric modelling and signal and image processing and their applications **Democratizing Cryptography** Rebecca Slayton, 2022-08-25 In the mid 1970s Whitfield Diffie and Martin Hellman invented public key cryptography an innovation that ultimately changed the world Today public key cryptography provides the primary basis for secure communication over the internet enabling online work socializing shopping government services and much more While other books have documented the development of public key cryptography this is the first to provide a comprehensive insiders perspective on the full impacts of public key cryptography including six original chapters by nine distinguished scholars The book begins with an original joint biography of the lives and careers of Diffie and Hellman highlighting parallels and intersections and contextualizing their work Subsequent chapters show how public key cryptography helped establish an open cryptography community and made lasting impacts on computer and network security theoretical computer science mathematics public

policy and society The volume includes particularly influential articles by Diffie and Hellman as well as newly transcribed interviews and Turing Award Lectures by both Diffie and Hellman The contributed chapters provide new insights that are accessible to a wide range of readers from computer science students and computer security professionals to historians of technology and members of the general public The chapters can be readily integrated into undergraduate and graduate courses on a range of topics including computer security theoretical computer science and mathematics the history of computing and science and technology policy Matrix Algorithms G. W. Stewart, 1998-08-01 This volume is the first in a self contained five volume series devoted to matrix algorithms It focuses on the computation of matrix decompositions that is the factorization of matrices into products of similar ones The first two chapters provide the required background from mathematics and computer science needed to work effectively in matrix computations. The remaining chapters are devoted to the LU and QR decompositions their computation and applications The singular value decomposition is also treated although algorithms for its computation will appear in the second volume of the series The present volume contains 65 algorithms formally presented in pseudocode Other volumes in the series will treat eigensystems iterative methods sparse matrices and structured problems The series is aimed at the nonspecialist who needs more than black box proficiency with matrix computations To give the series focus the emphasis is on algorithms their derivation and their analysis The reader is assumed to have a knowledge of elementary analysis and linear algebra and a reasonable amount of programming experience typically that of the beginning graduate engineer or the undergraduate in an honors program Strictly speaking the individual volumes are not textbooks although they are intended to teach the guiding principle being that if something is worth explaining it is worth explaining fully This has necessarily restricted the scope of the series but the selection of topics should give the reader a sound basis for further study The Didactical Challenge of Symbolic Calculators Dominique Guin, 2005 While computational technologies are transforming the professional practice of mathematics as yet they have had little impact on school mathematics. This pioneering text develops a theorized analysis of why this is and what can be done to address it It examines the particular case of symbolic calculators equipped with computer algebra systems in secondary education Drawing on a substantial program of French innovation and research as well as closely related studies from Australia and the Netherlands it provides rich illustrations of the many aspects of technology integration and of the ways in which these are shaped at different levels of the educational institution This text offers the first English language exposition of how an innovative synthesis of the theories of instrumentation and didactics can be used to illuminate the complexities of technology integration It offers important guidance for policy and practice through its analysis of the central role of the teacher and its identification of key principles for effective didactical design and management These distinctive features make this book essential reading for researchers teacher educators and graduate students in mathematics education and technology in education as well as for teachers of mathematics at upper secondary and university levels.
