

Annotated Bibliography – Mathematics, Course Requirements and the Relationship to College Preparation and Success

Barth, P. (2013). [The Curious Case of Algebra II](#). *American School Board Journal*.

This short article discusses the importance of Algebra II to college and career success and provides some history about the research reports that came to this conclusion in 2004 and 2005. Barth acknowledges that the importance of Algebra II has more recently been called into question, citing a more tenuous connection between intermediate algebra and career readiness.

- Two reports that contributed to the notion that Algebra II is an indicator of college readiness come from the American Diploma Project in 2004, which was arrived at through surveys of business leaders and higher education faculty as well as analyses of admissions and placement exams. In 2005, ACT conducted a crosswalk between its college admissions tests and its WorkKeys assessments for various occupations.
- More recently, these results have been called into question. The issue seems to come down to whether students were going directly into the workforce or attending college at various levels, from community to the traditional four-year option. Algebra II does not necessarily matter as much for those students who are going directly into the workforce (Barth, 2013). NCEE's issue is not specifically about Algebra II but is based on community college math offerings; they would recommend that students be allowed to take various math pathways as they enter high school, focusing on varied types of reasoning like modeling, statistics, probability and applied geometry. Barth takes some exception to this, stating that this might be ideal if we expected students to immediately go into their career paths or college majors, but that the purpose of secondary education goes beyond specific notions of employment and career and instead is supposed to build reason, critical thinking and broader skills to prepare students for a variety of occupations or academic experiences (2013). After all, most 14-year-olds could not be reasonably expected to chart out their career path the moment they enter high school.
- "And of all high school courses, high-level math seems to have the most powerful relationship to future success in college and the job market, as the Center for Public Education (CPE) shows in our 2009 report."
- "Over the last decade, Algebra II has become the proxy math for both college and career
