Wittgenstein and Beckett and a final chapter on recent engagements or nonengagements between rationalist realist philosophy of science and contemporary science studies Contributors Malcolm Ashmore Michel Callon Owen Flanagan John Law Susan Oyama Andrew Pickering Arkady Plotnitsky Brian Rotman Barbara Herrnstein Smith John Vignaux Smyth E Roy Weintraub **Mathematics in Postmodern American Fiction** Stuart J. Taylor, 2024-04-23 This book delivers an

innovative critical approach to better understand U S fiction of the information age and argues that in the last eighty years fiction has become increasingly concerned with its representations of mathematical ideas images and practices In so doing this book provides a fuller transnational account of the place of mathematics in understanding mathematically informed novels Literature and science studies have acknowledged and situated historical points of cultural crossover by emphasising mathematics within this larger intellectual context and not as an unlikely and alien adjunct to post war culture this monograph clarifies how mathematically informed postmodern fictions work in a cognate fashion to other fields undergoing structuralist revolutions This is especially evident in fiction by the key mathematically literate Postmodern authors upon whom this study focuses namely Thomas Pynchon Don DeLillo and David Foster Wallace through which recent the technological revolutions facilitated by mathematics manifest in cultural discourse **Towards a Philosophy of Real**

Mathematics David Corfield, 2003-04-24 In this ambitious study David Corfield attacks the widely held view that it is the nature of mathematical knowledge which has shaped the way in which mathematics is treated philosophically and claims that contingent factors have brought us to the present thematically limited discipline Illustrating his discussion with a wealth of examples he sets out a variety of approaches to new thinking about the philosophy of mathematics ranging from an exploration of whether computers producing mathematical proofs or conjectures are doing real mathematics to the use of analogy the prospects for a Bayesian confirmation theory the notion of a mathematical research programme and the ways in which new concepts are justified His inspiring book challenges both philosophers and mathematicians to develop the broadest and richest philosophical resources for work in their disciplines and points clearly to the ways in which this can be done **Metaphor and Analogy in the Sciences** F. Hallyn, 2013-03-14 Science constructs its objects is this a metaphor It

does not necessarily mean anyway that the real does not pre exist Only that in the final instance it is the Other of which we know neither the limits nor the figure and to which we only have access through the constructions we make of it Or in semiotic terms borrowed from Charles S Peirce the world is the dynamic object that intervenes in science only through the immediate objects that manifest themselves in signs And even then the choice of the term immediate is not entirely felicitous it would be better to talk of mediated objects since their conception is mediated by the conditions from which perception as well as the language that expresses it derive The preference bestowed on certain constructions over others results from the slighter recalcitrance in imagining a dynamic object through one or another mediated object This recalcitrance that prompts one to surrender constructions does not come directly from the real from the dynamic object but from other constructions

Again this does not mean that reality does not exist but that it only speaks confirms and objects to the extent that it is being questioned within a certain form by certain instruments in a certain language Even if it appears recalcitrant the dynamic object intervenes only through another construction Man not nature decides on the form to be considered the instruments and language to be adopted **18 Unconventional Essays on the Nature of Mathematics** Reuben Hersch,2006-01-16

This book comes from the Internet Browsing the Web I stumbled on philosophers cognitive scientists sociologists computer scientists even mathematicians saying original provocative things about mathematics And many of these people had probably never heard of each other So I have collected them here This way they can read each other's work I also bring back a few provocative oldies that deserve publicity The authors are philosophers mathematicians a cognitive scientist an anthropologist a computer scientist and a couple of sociologists Among the mathematicians are two Fields Prize winners and two Steele Prize winners None are historians I regret to say but there are two historically oriented articles These essays don't share any common program or ideology The standard for admission was Nothing boring Nothing trite nothing trivial Every essay is challenging thought provoking and original Back in the 1970s when I started writing about mathematics instead of just doing mathematics I had to complain about the literature Philosophy of science was already well into its modern revival largely stimulated by the book of Thomas Kuhn But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormon Quine The great exception was Proofs and Refutations by Imre Lakatos But that exciting book was still virtually unknown and unread by either mathematicians or philosophers I wrote an article entitled Introducing Imre Lakatos in the Mathematical Intelligencer in 1978 **How Nature Speaks** Yrjo

Disciplinarity at the Fin de Siècle Amanda Anderson, Joseph Valente, 2021-03-09 Contemporary celebrations of interdisciplinary scholarship in the humanities and social sciences often harbor a distrust of traditional disciplines which are seen as at best narrow and unimaginative and at worst complicit in larger forms of power and policing *Disciplinarity at the Fin de Siècle* questions these assumptions by examining for the first time in so sustained a manner the rise of a select number of academic disciplines in a historical perspective This collection of twelve essays focuses on the late Victorian era in Great Britain but also on Germany France and America in the same formative period The contributors James Buzard Lauren M E Goodlad Liah Greenfeld John Guillory Simon Joyce Henrika Kuklick Christopher Lane Jeff Nunokawa Arkady Plotnitsky Ivan Strenski Athena Vrettos and Gauri Viswanathan examine the genealogy of various fields including English sociology economics psychology and quantum physics Together with the editors cogent introduction they challenge the story of disciplinary formation as solely one of consolidation constraint and ideological justification Addressing a broad range of issues disciplinary formations disciplinarity and professionalism disciplines of the self discipline and the state and current

Material Ecocriticism and Sylvan Agency in Speculative Fiction Britta Maria Colligs,2023-12-06 Material Ecocriticism and Sylvan Agency in Speculative Fiction The Forests of the World links the examination of fictional forests and arboreal characters of speculative fiction with the literary approach of material ecocriticism and a conceptualization of a sylvan agency Aiming to establish and situate the investigation of sylvan

agency firmly within the context of material ecocriticism this book offers a framework for reading fictional forests with an ecocritical and particularly eco sylvan lens and applies it to the analysis of the sylvan realm arboreal characters and the relationship between human characters and their fictional forests in speculative fiction Drawing on the re negotiation of matter and material agency the comprehensive study of the sylvan realm establishes a sylvan and arboreal agency in speculative fiction ranging from classics such as J R R Tolkien s fantasy *The Lord of the Rings* 1954-55 or Ursula Le Guin s science fiction novella *The Word for World is Forest* 1961 to contemporary texts such as James Cameron s *Avatar* 2010 or Ali Shaw s *The Trees* 2016 The author argues for a re negotiation of a sylvan agency and facilitation of an eco sylvan awareness in times of environmental crisis

Measured Words Arielle Saiber, 2017-11-29 *Measured Words* explores the rich commerce between computation and writing that proliferated in fifteenth and sixteenth century Italy In this captivating and generously illustrated work Arielle Saiber studies the relationship between number shape and the written word in the works of four exceptional thinkers of the time Leon Battista Alberti Luca Pacioli Niccol Tartaglia and Giambattista Della Porta Although these Renaissance humanists came from different social classes and practised the mathematical and literary arts at varying levels of sophistication they were all guided by a sense that there exist deep ontological and epistemological bonds between computational and verbal thinking and production Their shared view that a network or continuity exists between the literary arts and mathematics yielded extraordinary results from Alberti s treatise on cryptography and Pacioli s design calculations for the Roman alphabet to Tartaglia s poetic solutions of cubic equations and Della Porta s dramatic applications of geometry Through lively cogent analysis of these and other related texts of the period *Measured Words* presents literally and figuratively brilliant examples of what interdisciplinary work can offer us
