Matter Motion And Force:

Isaac Beeckman on Matter and Motion Klaas van Berkel, 2013-08-14 Explore the work of a founding father of the mechanical philosophy of nature Isaac Beeckman 1588 1637 The contribution of the Dutch craftsman and scholar Isaac Beeckman to early modern scientific thought has never been properly acknowledged Surprisingly free from the constraints of traditional natural philosophy he developed a view of the world in which everything from the motion of the heavens to musical harmonies is explained by reducing it to matter in motion His ideas deeply influenced Descartes and Gassendi Klaas van Berkel has succeeded in unearthing and explicating Beeckman's scientific notebooks allowing us to follow how he developed his new philosophy almost day by day Beeckman was almost forgotten until the discovery of his notebooks in the early twentieth century Isaac Beeckman on Matter and Motion is the first full length study of the ideas and motives of this remarkable figure Van Berkel's important study first relates Beeckman's life placing him in the religious intellectual educational and social context of the Dutch Republic in its golden age Van Berkel then analyzes the notebooks themselves and the nature and development of Beeckman's mechanical philosophy He demonstrates how Beeckman's artisanal background and religious convictions shaped his natural philosophy even as the decisive influence stems from the educational philosophy of the sixteenth century French philosopher Peter Ramus Historians of science and the philosophy of science will find the substance of Beeckman's thought and the unraveling of its growth and development highly interesting Van Berkel's account provides a new and comprehensive interpretation of the origins of the mechanical philosophy of nature the philosophy that culminated in the work of Isaac Newton Force and Matter James Clarence Linden Adams, 1908

are written on this subject However after carefully setting out the views on the progress and power of all outstanding thinkers of the past and present the author has formulated the criteria of progress based on entirely different scientific paradigms Moreover Battler dared to formulate two Principles of Social Development similar in fundamentality to the First and Second Laws of thermodynamics The result was a book with very complex content This book is intended for teachers and students of philosophical and social sciences as well as for all those who are interested in the problems of man and humanity
