In *The Technique of Fiction Writing* Robert Saunders Dowst offers a profound exploration of the craft of storytelling blending theoretical insights with practical instruction Written in the early 20th century Dowst's work is situated within the broader context of literary realism and modernism reflecting a significant shift in narrative style and technique The book delves into the intricacies of plot development character construction and dialogue making it an invaluable resource for aspiring writers seeking to hone their skills Dowst's analytical yet accessible prose demystifies the art of writing fiction making complex concepts understandable without sacrificing depth Dowst an accomplished author and educator experiences the struggles and triumphs of writing in his own practice which deeply informs his teaching philosophy His background in literature and creative writing combined with his role as an educator enables him to articulate the nuances of storytelling effectively Drawing from his experiences with both classic and contemporary literature Dowst emphasizes the importance of technique while respecting the individual voice of each writer *The Technique of Fiction Writing* is recommended for both novice and seasoned writers offering valuable insights that transcend mere technique Dowst's work not only equips the reader with fundamental tools for writing but also inspires them to explore their unique narratives creatively Those eager to elevate their writing will find Dowst's guidance indispensable on their literary journey **The Change of Narrative Modes in Chinese Fiction (1898-1927)** Pingyuan Chen, 2022-02-17 This book examines the Chinese fictions xiaoshuo published between 1898 and 1927 three pivotal decades during which China underwent significant social changes It applies Narratology and Sociology of the Novel methods to analyze both the texts themselves and the social cultural factors that triggered the transformation of the narrative mode in Chinese fiction Based on empirical data the author argues that this transformation was not only inspired by translated Western fiction but was also the result of a creative transformation in tradition Chinese literature **Comparative Capital Punishment** Carol S. Steiker, Jordan M. Steiker, *Comparative Capital Punishment* offers a set of in depth critical and comparative contributions addressing death practices around the world Despite the dramatic decline of the death penalty in the last half of the twentieth century capital punishment remains in force in a substantial number of countries around the globe This research handbook explores both the forces behind the stunning recent rejection of the death penalty as well as the changing shape of capital practices where it is retained The expert contributors address the social political economic and cultural influences on both retention and abolition of the death penalty and consider the distinctive possibilities and pathways to worldwide abolition *Application of Machine Learning and Deep Learning Methods to Power System Problems* Morteza Nazari-Heris, Somayeh Asadi, Behnam Mohammadi-Ivatloo, Moloud Abdar, Houtan Jebelli, Milad Sadat-Mohammadi, 2021-10-20 This book evaluates the role of

innovative machine learning and deep learning methods in dealing with power system issues concentrating on recent developments and advances that improve planning operation and control of power systems Cutting edge case studies from around the world consider prediction classification clustering and fault event detection in power systems providing effective and promising solutions for many novel challenges faced by power system operators Written by leading experts the book will be an ideal resource for researchers and engineers working in the electrical power engineering and power system planning communities as well as students in advanced graduate level courses

Dynamic Story Scripting with the ink Scripting Language Daniel Cox, 2021-11-12 Bring your stories to life by combining the narrative scripting language ink with a plugin to build dialogue quest and procedural storytelling systems for Unity projects Key Features Learn how to translate stories into ink code to create interactive projects Gain valuable insight into the ink story API to create engaging stories using the Unity plugin Develop drop in solutions to common narrative problems for Unity projects Book Description ink is a narrative scripting language designed for use with game engines such as Unity through a plugin that provides an application programming interface API to help you to move between the branches of a story and access the values within it Hands On Dynamic Story Scripting with the ink Scripting Language begins by showing you how ink understands stories and how to write some simple branching projects You ll then move on to advanced usage with looping structures discovering how to use variables to set up dynamic events in a story and defining simple rules to create complex narratives for use with larger Unity projects As you advance you ll learn how the Unity plugin allows access to a running story through its API and explore the ways in which this can be used to move data in and out of an ink story to adapt to different interactions and forms of user input You ll also work with three specific use cases of ink with Unity by writing a dialogue system and creating quest structures and other branching narrative patterns Finally this will help you to find out how ink can be used to generate procedural storytelling patterns for Unity projects using different forms of data input By the end of this book you will be able to move from a simple story to an intricate Unity project using ink to power complex narrative structures What you will learn Discover how ink understands stories and their parts Examine ink patterns for making branching narratives Develop code in Unity using the ink plugin to manipulate stories Design advanced projects combining ink stories with C code Compare common use cases for ink and Unity such as dialogue systems Determine how ink can best fit into future narrative projects Who this book is for This book is for Unity developers looking for a solution for narrative driven projects and authors who want to create interactive story projects in Unity Basic knowledge of Unity game engine development and related concepts is needed to get the most out of this book

Software Technologies José Cordeiro, Marten van Sinderen, 2014-09-30 This book constitutes the thoroughly refereed proceedings of the 8th International Joint Conference on Software Technologies ICSOFT 2013 held in Reykjavik Iceland in July 2013 The 19 revised full papers presented were carefully reviewed and selected from 121 paper submissions The papers focus on the following research topics and applications new software paradigm trends and

mainstream software engineering and applications **Applications of Mathematics in Science and Technology** Bui Thanh Hung, M. Sekar, Ayhan ESI, R. Senthil Kumar, 2025-04-29 The Conference dealt with one of the most important problems faced in International development in Pure Mathematics and Applied mathematics development in engineering such as Cryptography Cyber Security Network Operations Research Heat Equation and so forth The aim of the conference was to provide a platform for researchers engineers academicians as well as industrial professionals to present their research results and development activities in Pure and Apply Mathematics and its applied technology It provided opportunities for the delegates to exchange new ideas and application experiences to establish business or research relations and to find global partners for future collaboration Contemporary Authors Tracey Watson, 2005-08 These exciting and unique author profiles are essential to your holdings because sketches are entirely revised and up to date and completely replace the original Contemporary Authors entries A softcover cumulative index is published twice per year included in subscription **The Wondrous Story of Anesthesia** Edmond I Eger II, Lawrence J. Saidman, Rod N. Automated Optimization Methods for Scientific Workflows in e-Science Infrastructures Sonja Holl, 2014 Scientific workflows have emerged as a key technology that assists scientists with the design management execution sharing and reuse of in silico experiments Workflow management systems simplify the management of scientific workflows by providing graphical interfaces for their development monitoring and analysis Nowadays e Science combines such workflow management systems with large scale data and computing resources into complex research infrastructures For instance e Science allows the conveyance of best practice research in collaborations by providing workflow repositories which facilitate the sharing and reuse of scientific workflows However scientists are still faced with different limitations while reusing workflows One of the most common challenges they meet is the need to select appropriate applications and their individual execution parameters If scientists do not want to rely on default or experience based parameters the best effort option is to

test different workflow set ups using either trial and error approaches or parameter sweeps Both methods may be inefficient or time consuming respectively especially when tuning a large number of parameters Therefore scientists require an effective and efficient mechanism that automatically tests different workflow set ups in an intelligent way and will help them to improve their scientific results This thesis addresses the limitation described above by defining and implementing an approach for the optimization of scientific workflows In the course of this work scientists needs are investigated and requirements are formulated resulting in an appropriate optimization concept In a following step this concept is prototypically implemented by extending a workflow management system with an optimization framework including general mechanisms required to conduct workflow optimization As optimization is an ongoing research topic different algorithms are provided by pluggable extensions plugins that can be loosely coupled with the framework resulting in a generic and quickly extendable system In this thesis an exemplary plugin is introduced which applies a Genetic Algorithm for parameter optimization In order to accelerate and therefore make workflow optimization feasible at all e Science infrastructures are utilized for the parallel execution of scientific workflows This is empowered by additional extensions enabling the execution of applications and workflows on distributed computing resources The actual implementation and therewith the general approach of workflow optimization is experimentally verified by four use cases in the life science domain All workflows were significantly improved which demonstrates the advantage of the proposed workflow optimization Finally a new collaboration based approach is introduced that harnesses optimization provenance to make optimization faster and more robust in the future
