A Cost Model for Expressing and Estimating Ecological Costs of Software-Driven Systems Thomas Schulze, 2017-08-23
The ecological footprint of our every day activities has become one of the greatest problems facing mankind today Reducing the environmental footprint of IT which has become a major contributor to green house gas emissions in the last decade is therefore a major research challenge for both industry and academia The focus of this book is to provide the foundation for expressing and estimating ecological costs of software systems in all life cycle phases including the earliest phases of software development thus helping all stakeholders make well informed choices In particular common eco cost drivers as well as new metrics are defined which allow meaningful and precise descriptions of ecological costs Based on these concepts auxiliary models are introduced which allow ecological costs and the circumstances causing them to be expressed in a unified unambiguous and easy to understand way These models provide input to algorithmic eco cost estimation models which show the impact of development decisions on ecological costs even in early phases of software development Both the estimation and auxiliary models accommodate different input allowing them to deliver the most accurate eco cost estimates possible based on the information available The approach presented in this book can therefore be used as the fulcrum of green software engineering methods to explore the eco costs of applications features and architectures at early stages in the development process before significant resources have been invested in their implementation It therefore facilitates the creation of eco friendlier software systems and by that contributing to the solution of one of the greatest problems facing mankind today

Medicine Meets Virtual Reality 14 J.D. Westwood,R.S. Haluck,H.M. Hoffman,2006-01-04 Machine intelligence will eclipse human intelligence within the next few decades extrapolating from Moore s Law and our world will enjoy limitless computational power and ubiquitous data networks Today s iPod devices portend an era when biology and information technology will fuse to create a human experience radically different from our own Already our healthcare system now appears on the verge of crisis accelerating change is part of the problem Each technological upgrade demands an investment of education and money and a costly infrastructure more quickly becomes obsolete Practitioners can be overloaded with complexity therapeutic options outcomes data procedural coding drug names etc Furthermore an aging global population with a growing sense of entitlement demands that each medical breakthrough be immediately available for

its benefit what appears in the morning paper is expected simultaneously in the doctor's office. Meanwhile a third party payer system generates conflicting priorities for patient care and stockholder returns. The result is a healthcare system stressed by scientific promise, public expectation, economic and regulatory constraints, and human limitations. Change is also proving beneficial of course. Practitioners are empowered by better imaging methods, more precise robotic tools, greater realism in training simulators, and more powerful intelligence networks. The remarkable accomplishments of the IT industry and the Internet are trickling steadily into healthcare. The Medicine Meets Virtual Reality series can readily see the progress of the past fourteen years: more effective healthcare at a lower overall cost, driven by cheaper and better computers.

Essentials of Healthcare Strategy and Performance Management James R. Langabeer, Tiffany Champagne-Langabeer, 2024-06-07
Leaders of healthcare organizations and students aspiring to become one should be asking themselves one thing in these financially challenging times: how can they maintain a strategic and competitive advantage over other players in their market? Some healthcare organizations have faced extremely poor financial performance in recent years, with data suggesting that up to 10% of hospitals will go bankrupt or face closure within the next 10 years. Yet little pragmatic evidence exists to offer insights into how to create better strategies to improve performance, build resiliency, and align stakeholders. **Essentials of Healthcare Strategy and Performance Management** explores the most critical components of business strategy and performance management for modern, complex healthcare organizations. Using pragmatic and real-world evidence, this book provides essential briefings on key topics that every current or aspiring leader needs to know in order to better manage strategy and achieve improved performance in their hospital or health system. We will also specifically focus on implementation of strategy and best practices for some of the most important quality management techniques. We hope this book helps inspire leaders to be creative in formulating more effective competitive strategy.

Performance Improvement in Hospitals and Health Systems James R. Langabeer II, FHIMSS, CMA, Editor,2009

Robust Loop-free On-demand Routing in Ad Hoc Networks Hari Rangarajan,2006 In this thesis we explore new techniques for robust efficient loop free on demand routing in Mobile Ad hoc Networks MANETs using the same information i e topology information sequence numbers etc used in prior on demand routing protocol proposals We provide new insights into the robustness of protocols based on destination sequence numbers when operating with node failures and loss of routing information and present a new destination sequence number framework that works correctly even with failure conditions We also show how destination sequence numbers can be manipulated as routing labels for improving performance rather than being strictly treated as time stamps We present two different routing approaches that exploit the topology information that can be collected on demand during the route request ood search The first approach translates topology information into labels that are then stored at nodes in strict lexicographic ordering along any successor path to a destination Loop freedom is maintained by allowing nodes to only pick smaller labels The second approach maintains a list of topology information that should not be trusted in addition to the known path to a destination Using the notion of trusted topology nodes can always make routingWe conclude our research with a new on demand routing technique that exploits the route request search process which is an integral part of any on demand routing protocol Without requiring any additional mechanisms or information we use the uniqueness of route requests to realize a on demand routing framework We then present extensions to the basic framework to improve performance using more information that can be collected during the flood search process
