E. Taplin, Min Qui, Vivian K. Salim, Renlong Han, 2005-01-01 Demonstrating the application of evolutionary computing techniques to an exceptionally complex problem in the real business world Cost Benefit Analysis and Evolutionary Computing will be of great value to academics and those practitioners and researchers interested in addressing the classic issue of evaluating road expansion and maintenance programs **BOOK JACKET** From Mobility to Accessibility Jonathan Levine, Joe Grengs, Louis A. Merlin, 2019-11-15 Levine Grengs and Merlin marshal a compelling case to shift to accessibility oriented planning providing much needed conceptual clarity as to what accessibility is and is not But their book also represents a major step toward transforming accessibility

from a vaguely defined aspiration into concrete measures that can guide planning decisions *Journal of the American Planning Association* In *From Mobility to Accessibility* an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance Jonathan Levine Joe Grengs and Louis A Merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people's ability to reach destinations rather than on their ability to travel fast Existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation But it is the ability to reach destinations not movement per se that people seek from their transportation systems While the concept of accessibility has been around for the better part of a century *From Mobility to Accessibility* shows that the accessibility shift is compelled by the fundamental purpose of transportation The book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the nature of accessibility and its potential for guiding development of the built environment By redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas [Advancing Equity Planning Now](#) Norman Krumholz, Kathryn Wertheim Hexter, 2019-01-15 What can planners do to restore equity to their craft Drawing upon the perspectives of a diverse group of planning experts *Advancing Equity Planning Now* places the concepts of fairness and equal access squarely in the center of planning research and practice Editors Norman Krumholz and Kathryn Wertheim Hexter provide essential resources for city leaders and planners as well as for students and others interested in shaping the built environment for a more just world *Advancing Equity Planning Now* remind us that equity has always been an integral consideration in the planning profession The historic roots of that ethical commitment go back more than a century Yet a trend of growing inequality in America as well as other recent socio economic changes that divide the wealthiest from the middle and working classes challenge the notion that a rising economic tide lifts all boats When planning becomes mere place making for elites urban and regional planners need to return to the fundamentals of their profession Although they have not always done so planners are well positioned to advocate for greater equity in public policies that address the multiple objectives of urban planning including housing transportation economic development and the removal of noxious land uses in neighborhoods Thanks to generous funding from Cleveland State University the ebook editions of this book are available as Open Access volumes from Cornell Open [cornellpress](#) [cornell.edu](#) [cornell.open](#) and other repositories *High Cost of Free Parking* Donald Shoup, 2021-02-25 Off street parking requirements are devastating American cities So says the author in this no holds barred treatise on the way parking should be Free parking the author argues has contributed to auto dependence rapid urban sprawl extravagant energy use and a host of other problems Planners mandate free parking to alleviate congestion but end up distorting transportation choices debasing urban design damaging the economy and

degrading the environment Ubiquitous free parking helps explain why our cities sprawl on a scale fit more for cars than for people and why American motor vehicles now consume one eighth of the world s total oil production But it doesn t have to be this way The author proposes new ways for cities to regulate parking namely charge fair market prices for curb parking use the resulting revenue to pay for services in the neighborhoods that generate it and remove zoning requirements for off street parking
