MHC Volume 1 N. Fernandez, G. Butcher, 1997-08-21 The major histocompatibility complex is the subject of much research in the immunology area There is great interest in the structure of MHC proteins and in their function as antigen presenting molecules Many immunology labs are now faced with the prospect of tackling biochemical and genetic techniques in order to study these molecules and these two Practical Approach volumes provide the ideal introduction MHC 1 Antigen Processing and Presentation is complemented by MHC 2 Genes Cells and Molecules **Signalling by Inositides** Stephen Shears, 1997-07-03 The metabolism and functions of inositol phosphates impinge on various branches of biochemistry physiology and molecular biology and methodological information is in consequence scattered far and wide This book unites a selection of the most fundamental and commonly used techniques from leading international signal transduction laboratories and brings together many valuable protocols for purifying and assaying inositides and related compounds A novel feature is a catalogue of non commercial sources of synthetic inositide analogues **PCR 3**, 1997-10-30 PCR in situ hybridization allows the detection of specific nucleic acid sequences and their distribution in the cell It combines two powerful techniques in situ hybridization ISH which allows cellular localization of DNA and RNA sequences in cells and tissues and the polymerase chain reaction PCR which allows reproducible amplification of rare nucleic acid sequences The combined technique and its variants greatly enhance the sensitivity of in situ hybridization and add morphological localization to the sensitivity of PCR Such techniques have enormous potential for research and diagnosis but problems with reproducibility and reliability are often encountered This book overcomes these problems by describing the key procedures in step by step detail and by providing the essential advice needed for success Topics include DNA in situ PCR and DNA PCR in situ hybridization PCR ISH for the detection of DNA targets in cells reverse transcriptase in situ PCR RT PCR and RT PCR ISH for the detection of RNA targets and PRINS primed in situ synthesis for chromosomal analysis in interphase nuclei and metaphase chromosome spreads There are further chapters on fixation of tissues for PCR selective ultraviolet radiation fractionation SURF application of in situ PCR to human tissues applications and modifications of PCR ISH and automation of in situ amplification PCR In Situ Hybridization is a unique and timely collection of well tested protocols for the amplification of DNA and RNA in cells and tissues drawing on the accumulated knowledge and experience of leading exponents of these techniques For each topic covered the authors provide detailed guidance on the key steps in the protocols numerous hints and tips for success and advice on trouble shooting PCR In Situ Hybridization will be invaluable to molecular biologists pathologists geneticists and all those seeking to perform in situ analyses of nucleic acid molecules *Protein Expression*, 1999-05-20 Protein Expression A Practical Approach and its companion volume Post translational Modification A Practical Approach complete the mini series of Practical Approach books covering the synthesis and subsequent processing of proteins Protein Expression A Practical Approach details the expression of cloned DNA or RNA templates in all the major in vivo and

in vitro systems The in vivo systems covered are cultured mammalian cells the yeasts *Saccharomyces cerevisiae* and *Pichia pastoris* baculovirus *Xenopus* oocytes and prokaryotic cells Cell free systems of both eukaryotes and prokaryotes are described including the prokaryotic systems that offer coupled transcription translation There is also a chapter on monitoring protein expression The post translational fate of proteins is covered in Post Translational Processing A Practical Approach

Post-translational Processing, 1999-05-20 Post translational Modification A Practical Approach and its companion volume Protein Expression A Practical Approach form the final part of the PAS mini series on protein synthesis and processing This volume begins with a chapter on protein sequencing followed by a chapter on protein folding and import into organelles The next three chapters cover the three major forms of covalent modification phosphorylation glycosylation and lipid modification Proteolytic processing the is the next topic and the final two chapters are concerned with protein turnover in mammalian cells and yeast This book is a comprehensive volume of the best current methodology and is designed to be used at the bench or away from the bench to gain insight into future experimental approaches Cytokine Molecular Biology, 2000-11-09 Cytokine Molecular Biology concentrates on molecular biology techniques for the study of cytokines cytokine receptors and cytokine driven processes Updated topics from the previous edition are the cloning and expressing cytokine genes the detection of cytokine mRNA receptor binding studies the PC specific phospholipase C and sphingomyelinases In addition new topics covered are the purification sequencing and synthesis of cytokines studying cytokine gene polymorphisms the use of proteomics in cytokine research and the Jak STAT and MAPK signalling pathways Written by experts in the field Cytokine Molecular Biology and Cytokine Cellular Biology form a comprehensive and essential guide to cytokine research

Eukaryotic DNA Replication, 1999-02-18 Eukaryotic DNA Replication A Practical Approach is a comprehensive practical manual with each of its eleven chapters describing an aspect of the methods currently used to investigate DNA replication in eukaryotes The sequence of the chapters corresponds roughly to the order of events during DNA replication The first chapters are concerned with initiation looking at methods to characterize origins of replication and the proteins that interact with them There then follow chapters describing protocols for the study of the elongation phase and the synthesis of the telomeres The final chapters provide a more general overview of the study of DNA replication including its investigation in model systems such as yeast *Xenopus* and viruses and looks into methods used to study DNA protein interactions that could be applied to the study of replication proteins This exciting new volume provides over 120 tried and tested protocols for the analysis of eukaryotic DNA replication and will be of major interest to a wide variety of molecular and cell biologists biochemists and medical researchers *Middleton's Allergy 2-Volume Set* A Wesley Burks, MD, N. Transgenic Mice and Mutants in MHC Research Igor K. Egorov, Chella S. David, 2012-12-06 This volume contains papers presented at the international conference on Transgenic Mice and Mutants in MHC Research held in Bar Harbor Maine in June 1989 The meeting brought together eighty researchers working in the field While mouse H 2 mutants have been known for many years their studies continue to contribute a great deal to our understanding of structure function relationships and evolution of MHC molecules Recently a new direction of research has emerged on regulation expression and function of MHC genes using transgenic animals carrying exogenous MHC genes from the same or other species or engineered MHC genes With the introduction of transgenic mice more specific questions about the various functions of MHC genes can be answered as for example the role of soluble and membrane bound MHC molecules in self

tolerance and elimination of specific T cell clones recognition of human MHC antigens by the mouse immune system the role of individual human MHC genes in disease susceptibility New approaches for evaluation of the role of MHC linked and unlinked genes in susceptibility of mice to malignant tumors and their metastases have been also reported Our purpose has been to provide a forum for discussion of these new developments Many questions remain to be answered but the necessary tools have become available We thank the contributors and hope that the readers will benefit from this Proceedings We wish to acknowledge the financial sponsorship for the meeting by The Pew Charitable Trust and Howard Hughes Medical Institute
