Microdosimetry An Interdisciplinary Approach:

Microdosimetry Dudley T. Goodhead, Peter O'Neill, H. G. Menzel, 1997 This book brings together experts in physics chemistry molecular and cell biology and oncogenesis to advance the application of microdosimetry to other fields

Microdosimetry Lennart Lindborg, Anthony Waker, 2017-07-06 Experimental microdosimetry deals with the measurement of charged particle energy deposition in tissue equivalent volumes ranging in size from nanometres to micrometres Microdosimetry is employed to improve our understanding of the relationship between radiation energy deposition the resulting biological effects and the appropriate quantities to be used in characterizing and quantifying radiation quality Although many reviews and contributions to the field have been published over the past fifty years this new book is the first to provide a single up to date and easily accessible account of experimental microdosimetry This book is designed to be used in medical radiation and health physics courses and by Master s and PhD students In addition to serving as an introductory text to the field for graduate students this book will also be of interest as a teaching and reference resource for graduate supervisors and established researchers Drs Lennart Lindborg and Anthony Waker have spent a life time career in experimental microdosimetry research in academic industrial and regulatory environments and have observed the development of the field from its early days as a recognized discipline they bring to this book particular knowledge and experience in the design construction operation and use of tissue equivalent gas ionization counters and chambers

Technical Basis of Radiation Therapy Seymour H. Levitt, James A. Purdy, Carlos A. Perez, Philip Poortmans, 2012-01-25 This book offers a detailed examination of the technological basis of radiation therapy It is jointly written by North American and European authors which broadens the contents and increases the book s applicability in daily practice throughout the world

Biologically Optimized Radiation Therapy Anders Brahme, Bengt K Lind, Roger Svensson, Bo Nilsson, Panayiotis Mavroidis, Kiarash Moaierifar, Hans Svensson, 2014-03-21 Radiation therapy has developed and advanced dramatically in the last few decades However very little has been published or done in the area of biologically optimized treatment planning Development of Biologically Optimized Radiation Therapy aims to fill and close an important gap in the literature with a well focused and in depth content The book covers the biological physical and clinical background of advanced biologically based radiation therapy optimization with focus on modern radiation therapy modalities such as electron photon and light ion therapy Highly recommended for its strong interdisciplinary profile the book contains a meritorious compilation of previously unpublished materials in many areas of modern science Undergraduates researchers and practitioners such as oncologists medical physicists and radiation biologists alike should find the book immensely informative and comprehensively thorough

Fundamentals for the Assessment of Risks from Environmental Radiation Christa Baumstark-Khan, Stanislav Kozubek, Gerda Horneck, 2013-12-01 Human health as well as aquatic and terrestrial ecosystems are threatened from increasing levels of environmental radiation of various sources many of them of anthropogenic causality large areas of the former

Soviet Union suffer from radioactive pollution in particular after the Chernobyl accident the increase in the incidence of UVB radiation on the Earth's surface as a result of a progressive depletion of stratospheric ozone is a global problem that requires international concerted actions in areas of former uranium mining the natural radiation level is substantially increased due to elevated radon levels a growing portion of the population involved in air traffic is exposed to increased levels of natural radiation and with the International Space Station an increasing number of astronauts will be exposed to the complex field of cosmic radiation To estimate the corresponding risks a better knowledge of the underlying radiobiological mechanisms at the molecular cellular and system level is required This book is the result of a multidisciplinary effort to discuss the current state of knowledge of the fundamental processes that result from interactions of environmental radiation ionizing as well as UV radiation with living matter and the existing radiation protection concepts and then to define future research work needed as fundamental information for the assessment of risks from increased levels of environmental radiation to human health and ecosystem balance It comprises the key lectures and statements presented at the NATO Advanced Research Workshop

Life Sciences and Radiation Jürgen Kiefer,2011-06-27 Scope and ideas of the workshop The workshop which took place at the University of Giessen from Oct 3 to Oct 7 2002 and whose proceedings are collected in this volume started from the idea to convene a number of scientists with the aim to outline their visions for the future of radiation research on the basis of their expertise As radiation research is a very wide field restrictions were unavoidable It was decided to concentrate this time mainly on molecular and cellular biology because it was felt that here action is par ticularly needed This did not exclude contributions from neighbouring fields as may be seen from the table of contents It was clearly not planned to have a c prehensive account of the present scientif ic achievements but the results presented should only serve as a starting point for the discussion of future lines of research with the emphasis on the outreach to other parts of life sciences If you are interested in the future ask the young we attempted therefore to invite mainly younger colleagues with a few exceptions who had however already left their marks in the field They were asked to describe what they felt is important in radiation research and may have significant influences on other branches of life sciences They were given the task to demonstrate what is lost for science if we do no longer exist

Low Dose Exposures in the Environment C. Streffer, H. Bolt, D. Follesdal, P. Hall, J. G. Hengstler, P. Jacob, D. Oughton, K. Prieß, E. Reh binder, E. Swaton, 2013-11-11 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public

Environmental Standards Christian Streffer, Josef Bucker, Adrienne Cansier, Dieter Cansier, Carl Friedrich Gethmann, Robert Guderian, Gerd Hanekamp, Dietrich Henschler, Gerald Pösch, Eckard Reh binder, Ortwin Renn, Marco Slesina, Kerstin Wuttke, 2013-06-29 The rapid growth of the world population nearly six fold over the last hundred years combined with the rising number of technical installations especially in the industrialized countries has lead to ever tighter and more strained living spaces on our planet Because of the inevitable processes of life man was at first an exploiter rather than a careful preserver of the environment Environmental awareness with the intention to conserve the environment has grown only in the last few decades Environmental standards have been defined and limit values have been set largely guided however by scientific and medical data on single exposures while public opinion on the other hand now increasingly calls for a stronger consideration of the more complex situations following combined exposures Furthermore it turned out that environmental standards while necessarily based on scientific data must also take into account ethical legal economic and sociological aspects A task of such complexity can only be dealt with appropriately in the framework of an interdisciplinary group
