Debus,2024-10-04 The incomprehensible notion of a very large chunk of ice or rock from outer space smashing into the Earth has only become mainstream within the past two centuries Though early writers imagined the utterly fantastic consequences of comet collisions and speculated on the devastation they might wreak it was not until the 1980s when scientists finally resolved that dinosaurs were extinguished by an asteroid 66 million years ago This startling announcement captivated the media and tilted the science fiction world but in reality history may have been punctuated repeatedly by such events This book collects and analyzes ideas of asteroid comet and planetary impacts with Earth spanning two centuries from the first realization of extinctions in fossil records to the new millennium reflected in scores of sci fi stories films and televised science documentaries The author examines social and geopolitical fears tied to the prospect of a cosmic borne catastrophe Science fiction and speculation are artfully melded *Dinosaur Memories* Allen Debus,2002 Dinosaur memories are hard to forget Most who revel in the current renaissance in dinosaur science art fiction and movies or who enjoy the other appealing prehistoric animals so well popularized by the media have fond recollections of what it was like growing up dinosaur Together with wife Diane and his father Allen G Debus Allen A Debus unveils treasured dinosaur memories and stories about prehistoric animals and paleo people spanning from the cold blooded dinosaur era to the modern wave dinosaur renaissance Beginning with fondly recalled roadtrips to prehistoric places where T rex still reigns *Dinosaur Memories* ventures into the realm of thunder beasts and explores the rich

Controversy Catastrophism and Evolution Trevor Palmer,2012-12-06 In Controversy Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record According to the catastrophists new species do not evolve gradually they proliferate following sudden mass extinctions Placing this major change of perspective within the context of a range of ancient debates Palmer discusses such topics as the history of the solar system present day extraterrestrial threats to earth hominid evolution and the fossil record *Narrative Science* Mary S. Morgan,Kim M. Hajek,Dominic J. Berry,2022-10-06 Narrative Science examines the use of narrative in scientific research over the last two centuries It brings together an international group of scholars who have engaged in

Debus,2016-06-21 From their discovery in the 19th century to the dawn of the Nuclear Age dinosaurs were seen in popular culture as ambassadors of the geological past and as icons of the life through time narrative of evolution They took on a more foreboding character during the Cold War serving as a warning to mankind with the advent of the hydrogen bomb As fears of human extinction escalated during the ecological movement of the 1970s dinosaurs communicated their metaphorical message of extinction urging us from our destructive path Using an eclectic variety of examples this book outlines the three fold evolution of dinosaurs and other prehistoric monsters in pop culture from their poorly understood beginnings to the 21st century **Atlas of Meteor Showers** Philip M. reveals periods when biodiversity exploded and short intervals when much of life was wiped out in mass extinction events In comparison with these ancient events today s biotic crisis hasn t yet reached the level of extinction to be called a mass extinction But we are certainly in crisis and current parallels with ancient mass extinction events are profound and deeply worrying Humanity s actions are applying the same sorts of pressures on similar scales that in the past pushed the Earth system out of equilibrium and triggered mass extinction events Analysis of the fossil record suggests that we still have some time to avert this disaster but we must act now

T. rex and the Crater of Doom Walter Alvarez, 2015-09-15 Sixty five million years ago a comet or asteroid larger than Mount Everest slammed into the Earth inducing an explosion equivalent to the detonation of a hundred million hydrogen bombs Vaporized detritus blasted through the atmosphere upon impact falling back to Earth around the globe Disastrous environmental consequences ensued a giant tsunami continent scale wildfires darkness and cold followed by sweltering greenhouse heat When conditions returned to normal half the plant and animal genera on Earth had perished This horrific chain of events is now widely accepted as the solution to a great scientific mystery what caused the extinction of the dinosaurs Walter Alvarez one of the Berkeley scientists who discovered evidence of the impact tells the story behind the development of the initially controversial theory It is a saga of high adventure in remote locations of arduous data collection and intellectual struggle of long periods of frustration ended by sudden breakthroughs of friendships made and lost and of the exhilaration of discovery that forever altered our understanding of Earth s geological history

Pebble in the Sky Isaac Asimov, 2020-09-01 The third and final book in the Galactic Empire series the spectacular precursor to the classic Foundation series by one of history s most influential writers of science fiction Isaac Asimov After years of bitter struggle Trantor had at last completed its work its Galactic Empire ruled all 200 million planets of the Galaxy all but one On a backward planet called Earth were those who nurtured bitter dreams of a mythical half remembered past when the planet was humanity s only home The other worlds despised it or merely patronized it until a man from the past miraculously stepped through a time fault that spanned a millennium living proof of Earth s most preposterous claims Joseph Schwartz was a happily retired Chicago tailor circa 1949 Trapped in an incredible future he could barely comprehend the unlikely time traveler would soon become a pawn in a desperate conspiracy to bring down the Empire in a twist of agony and death a mad plan to restore Earth s tarnished glory by ending human life on every other world

Impact! Gerrit L. Verschuur, 1997-12-18 Most scientists now agree that some sixty five million years ago an immense comet slammed into the Yucatan detonating a blast twenty million times more powerful than the largest hydrogen bomb punching a hole ten miles deep in the earth Trillions of tons of rock were vaporized and launched into the atmosphere For a thousand miles in all directions vegetation burst into flames There were tremendous blast waves searing winds showers of molten matter from the sky earthquakes and a terrible darkness that cut out sunlight for a year enveloping the planet in freezing cold Thousands of species of plants and animals were obliterated including the dinosaurs some of which may have become extinct in a matter of

hours In Impact Gerrit L Verschuur offers an eye opening look at such catastrophic collisions with our planet Perhaps more important he paints an unsettling portrait of the possibility of new collisions with earth exploring potential threats to our planet and describing what scientists are doing right now to prepare for this awful possibility Every day something from space hits our planet Verschuur reveals In fact about 10 000 tons of space debris fall to earth every year mostly in meteoric form The author recounts spectacular recent sightings such as over Allende Mexico in 1969 when a fireball showered the region with four tons of fragments and the twenty six pound meteor that went through the trunk of a red Chevy Malibu in Peekskill New York in 1992 the meteor was subsequently sold for 69 000 and the car itself fetched 10 000 But meteors are not the greatest threat to life on earth the author points out The major threats are asteroids and comets The reader discovers that astronomers have located some 350 NEAs Near Earth Asteroids objects whose orbits cross the orbit of the earth the largest of which are 1627 Ivar 6 kilometers wide and 1580 Betula 8 kilometers Indeed we learn that in 1989 a bus sized asteroid called Asclepius missed our planet by 650 000 kilometers a mere six hours and that in 1994 a sixty foot object passed within 180 000 kilometers half the distance to the moon Comets of course are even more deadly Verschuur provides a gripping description of the small comet that exploded in the atmosphere above the Tunguska River valley in Siberia in 1908 in a blinding flash visible for several thousand miles every tree within sixty miles of ground zero was flattened He discusses Comet Swift Tuttle the most dangerous object in the solar system a comet far larger than the one that killed off the dinosaurs due to pass through earth s orbit in the year 2126 And he recounts the collision of Comet Shoemaker Levy 9 with Jupiter in 1994 as some twenty cometary fragments struck the giant planet over the course of several days casting titanic plumes out into space when Fragment G hit it outshone the planet on the infrared band and left a dark area at the impact site larger than the Great Red Spot In addition the author describes the efforts of Spacewatch and other groups to locate NEAs and evaluates the idea that comet and asteroid impacts have been an underrated factor in the evolution of life on earth Astronomer Herbert Howe observed in 1897 While there are not definite data to reason from it is believed that an encounter with the nucleus of one of the largest comets is not to be desired As Verschuur shows in Impact we now have substantial data with which to support Howe s tongue in cheek remark Whether discussing monumental tsunamis or the innumerable comets in the Solar System this book will enthrall anyone curious about outer space remarkable natural phenomenon or the future of the planet earth
