New Directions Rolf Färe, Shawna Grosskopf, 2006-03-30 The format of this monograph is three essays which we arrived at after spending a year writing over one hundred pages of what we eventually realized was a tedious reworking of old material So we started over determined to write something new At first we thought this approach might not work as a coherent monograph which is why we chose the essay format rather than chapters As it turns out there is a common thread namely the directional distance function which also gave us our title As you shall see the directional distance function includes traditional distance functions and efficiency measures as special cases providing a unifying framework for existing productivity and efficiency measures It is also flexible enough to open up new areas in productivity and efficiency analysis such as environmental and aggregation issues That we did not see this earlier is humbling a student at a recent conference raised his hand and asked Why didn't you start with the directional distance function in the first place In deed This manuscript is intended to make up for our earlier oversights This monograph contains papers coauthored with Wen Fu Lee and Osman Zaim and one paper written by two former students Hiroyuki Fukuyama and Bill Weber We thank them for their contributions An other former student Jim Logan Logi read and critiqued the manuscript for which we are grateful **New**

Payne,2014-07-11 In 1938 Prime Minister Neville Chamberlain hoped that a policy of appeasement would satisfy Adolf Hitler s territorial appetite and structured British policy accordingly This plan was a failure chiefly because Hitler was not a statesman who would ultimately conform to familiar norms Chamberlain s policy was doomed because he had greatly misjudged Hitler s basic beliefs and thus his behavior U S Cold War nuclear deterrence policy was similarly based on the confident but questionable assumption that Soviet leaders would be rational by Washington s standards they would behave reasonably when presented with nuclear threats The United States assumed that any sane challenger would be deterred from severe provocations because not to do so would be foolish Keith B Payne addresses the question of whether this line of reasoning is adequate for the post Cold War period By analyzing past situations and a plausible future scenario a U S Chinese crisis over Taiwan he proposes that American policymakers move away from the assumption that all our opponents are comfortably predictable by the standards of our own culture In order to avoid unexpected and possibly disastrous failures of deterrence he argues we should closely examine particular opponents culture and beliefs in order to better anticipate their likely responses to U S deterrence threats
