New Consumers The Influence Of Affluence On The Environment:

The New Consumers Norman Myers, Jennifer Kent, 2013-04-10 While overconsumption by the developed world's roughly one billion inhabitants is an abiding problem another one billion increasingly affluent new consumers in developing countries will place additional strains on the earth's resources argue authors Norman Myers and Jennifer Kent in this important new book *The New Consumers* examines the environmental impacts of this increased consumption with particular focus on two commodities cars and meat that stand to have the most far reaching effects It analyzes consumption patterns in a number of different countries with special emphasis on China and India whose surging economies as well as their large populations are likely to account for exceptional growth in humanity's ecological footprint and surveys big picture issues such as the globalization of economies consumer goods and lifestyles Ultimately according to the orman Myers and Jennifer Kent the challenge will be for all of humanity to transition to sustainable levels of consumption for it is unrealistic to expect new consumers not to aspire to be like the old ones Cogent in its analysis *The New Consumers* issues a timely warning of a major and developing environmental trend and suggests valuable strategies for ameliorating its effects

The Future of Consumer Society Maurie J. Cohen, 2016-11-03 Consumer society in the United States and other countries is receding due to demographic ageing rising income inequality political paralysis and resource scarcity At the same time steady jobs that compensate employees on a salaried or hourly basis are being replaced by freelancing and contingent work The rise of the so called sharing economy the growth of do it yourself production and the spreading popularity of economic localization are evidence that people are striving to find new ways to ensure livelihoods for themselves and their families in the face of profound change Indications are that we are at the early stages of a transition away from a system of social organization predicated on consumerism These developments have prompted some policy makers to suggest providing households with a non labor source of income that would enable more adequate satisfaction of their basic needs These proposals include a universal basic income a citizen's dividend and a legal framework for broad based stock ownership in corporations However extreme political fractiousness makes it unlikely that these recommendations will receive prompt and widespread legislative endorsement in most countries In the meantime we seem to be moving incontrovertibly toward a twenty first century version of feudalism How might we chart a different path founded on social inclusiveness and economic security A practicable option entails establishment of networks of interlinked worker consumer cooperatives that organizationally unify production and consumer Such modes of mutual assistance already exist and *The Future of Consumer Society* profiles several successful examples from around the world If replicated and scaled worker consumer cooperatives could smooth the transition beyond consumer society and facilitate a future premised on sufficiency resiliency and well being

Sustainable Ho Chi Minh City: Climate Policies for Emerging Mega Cities Antje Katzschner, Michael Waibel, Dirk Schwede, Lutz Katzschner, Michael Schmidt, Harry Storch, 2015-12-01 As climate change and urban development are closely interlinked and

often interact negatively this edited volume takes Ho Chi Minh City HCMC Vietnam s first mega urban region as a case study to analyse its vulnerability to climate change and to suggest measures towards a more sustainable urban development The book offers an overview on land use planning regarding the aspects of urban flooding urban climate urban energy and urban mobility as well as spatial views from the angle of urban planning such as the metropolitan level the city the neighbourhood and building level It shows that to a significant degree measures dealing with climate change can be taken from the toolbox of sustainable urban development and reflects how institutional structures need to change to enhance chances for implementation given socio cultural and economic constraints This is merged and integrated into a holistic perspective of planning recommendations supporting the municipal government to increase its adaptive capacity The authors are members of a German government funded research project on how to support HCMC s municipal government to adapt to risks related to climate change

Counterculture Green Andrew G. Kirk, 2007 For many it was more than a publication it was a way of life The Whole Earth Catalog billed itself as Access to Tools and it grew from a Bay Area blip to a national phenomenon catering to hippies do it yourselfers and anyone interested in self sufficiency independent of mainstream America now known as living off the grid In recovering the history of the Catalog s unique brand of environmentalism historian Kirk recounts how Stewart Brand and the Point Foundation promoted a philosophy of pragmatic environmentalism that celebrated technological achievement human ingenuity and sustainable living Kirk shows us that Whole Earth was more than a mere counterculture fad At a time when many of these

ideas were seen as heretical to a predominantly wilderness based movement it became a critical forum for environmental alternatives and a model for how complicated ecological ideas could be presented in a hopeful and even humorous way From publisher description [An Introduction to Ecological Economics](#) Robert Costanza,John H Cumberland,Herman Daly,Robert Goodland,Richard B Norgaard,Ida Kubiszewski,Carol Franco,2014-12-02 From Empty World Economics to Full World Economics Ecological economics explores new ways of thinking about how we manage our lives and our planet to achieve a sustainable equitable and prosperous future Ecological economics extends and integrates the study and management of both nature s household and humankind s household An Introduction to *Human Impact on the Natural Environment* Andrew S. Goudie,2018-06-15 A brand new edition of the definitive textbook on humankind s impact on the Earth s environment now in full color This classic text explores the multitude of impacts that humans have had over time upon vegetation animals soils water landforms and the atmosphere It considers the ways in which climate changes and modifications in land cover may change the environment in coming decades Thoroughly revised to cover the remarkable transformation in interest that humans are having in the environment this book examines previously uncovered topics such as rewilding ecosystem services techniques for study novel and no analogue ecosystems and more It also presents the latest views on big themes such as human origins the anthropocene domestication extinctions and ecological invasions Extensively re written Human Impact on the Natural Environment Eighth Edition contains many new and updated statistical tables figures and references It offers enlightening chapters that look at the past and present state of the world examining our impact on the land itself and the creatures that inhabit it the oceans lakes rivers and streams and the climate and atmosphere The book also takes a deep look at our future impact on the planet and its resources our affect on the coastal environments the cryosphere and the drylands as well as the hydrological and geomorphological impacts Fully updated to take account of recent advances in our understanding of global warming and other phenomena Offers current opinions on such topics as human origins the anthropocene domestication extinctions and ecological invasions Features a full color presentation to allow for more and clearer photographs and diagrams Contains more international case studies than previous editions to balance UK examples Human Impact on the Natural Environment is essential reading for undergraduates in geography and environmental science and for those who want a thorough wide ranging and balanced overview of the impacts of humans upon natural processes and systems from the Stone Age to the Anthropocene and who wish to understand the major environmental issues that concern the human race at the present time **Material Geographies of Household Sustainability** Andrew Gorman-Murray,2016-05-13 Charting new research directions this book constructs a series of imperatives for linking culturally informed research around household sustainability with policy and planning The household or home is a critical scale for understanding activities that connect individual behaviours and societal attitudes The focus on the household in this collection provides a window into the sheer diversity of homemaking and maintenance activities that entail resource use

These practices have affective or emotive dimensions as well as habitual aspects. Diversity, innovation and change at the household scale is often missed in policy approaches which assume that simplistic economic motivations drive demand and this can in turn be managed through regulation or market pricing. The research challenge extends beyond describing existing unsustainable economies driving resource intensive behaviour to consider realistic options for transformations in cultural practices, material relationships and ultimately the political economies they sit within. Without change in these systems, government initiatives to promote ecological modernisation run the risk of simply green washing the very economies of consumption that currently drive unsustainable practices. Social and cultural change at the household level is critical to promoting sustainability at a range of wider scales.

The Human Impact on the Natural Environment Andrew S. Goudie, 2013-04-02. The seventh edition of this classic student text explores the multitude of impacts that humans have had over time upon vegetation, animals, soils, water, landforms and the atmosphere. It also looks into the future and considers the ways in which climate changes and modifications in land cover may change the environment in coming decades. Extensively rewritten, it contains many new statistical tables, figures and references. It is essential reading for undergraduates in geography and environmental science and for those who want a thorough, wide-ranging and balanced overview of the impacts of humans upon natural processes and systems from the Stone Age to the Anthropocene and who wish to understand the major environmental issues that concern the human race at the present time. Environmental Health Perspectives, 2004. Global Environmental Governance James Gustave Speth and Peter M. Haas, 2007-09. Global Environmental Governance examines ten major environmental threats: climate disruption, biodiversity loss, acid rain, ozone depletion, deforestation, desertification, freshwater degradation and shortages, decline of marine fisheries, toxic pollutants and excess nitrogen, and explores how they can be addressed through treaties, governance regimes and new forms of international cooperation. It also critically examines the serious shortcomings of current efforts and the underlying reasons for the persistence of disturbing trends. This book presents key concepts in international law and regime formation in simple, accessible language and describes the current institutional landscape, lessons learned and new directions needed in international governance.

Sustainable Production Consumption Systems Louis Lebel, Sylvia Lorek, Rajesh Daniel, 2009-12-02. Sustainable Production Consumption Systems brings together a set of designed case studies intended to provide a more in-depth understanding of challenges and opportunities in bringing knowledge and actions closer together for the sustainable management of specific production and consumption systems. The case study approach enabled researchers to engage directly with some of the actors involved in the production, consumption or regulation of specific goods or services and other stakeholders affected by those processes. Such engagement was particularly worthwhile when it helped mobilize actors to pursue linking knowledge with action in ways that improve the prospects for sustainability.
