New Dimensions in Production and Utilization of Hydrogen Sonil Nanda, Dai-Viet N. Vo, Phuong Nguyen Tri, 2020-08-11

The gradual increase of population and the consequential rise in the energy demands in the recent years have led to the overwhelming use of fossil fuels. Hydrogen has recently gained substantial interest because of its outstanding features to be used as clean energy carrier and energy vector. Moreover, hydrogen appears to be an effective alternative to tackle the issues of energy security and greenhouse gas emissions given that it is widely recognized as a clean fuel with high energy capacity. Hydrogen can be produced by various techniques such as thermochemical, hydrothermal, electrochemical, electrolytic, biological, and photocatalytic methods as well as hybrid systems. *New Dimensions in Production and Utilization of Hydrogen* emphasizes on the research development and innovations in the production and utilization of hydrogen in the industrial, biorefining, hydrotreating, and hydrogenation technologies, fuel cells, aerospace sector, pharmaceuticals, metallurgy, as well as bio-oil upgrading. Moreover, the supply chain analysis, lifecycle assessment, techno-economic analysis, as well as strengths and threats of the global hydrogen market are covered in the book. This book provides many significant insights and scientific findings of key technologies for hydrogen production, storage, and emerging applications. The book serves as a reference material for chemical and biochemical engineers, mechanical engineers, physicists, chemists, biologists, biomedical scientists, and scholars working in the field of sustainable energy and materials. Discusses the efficient usage of hydrogen as standalone fuel or feedstock in downstream processing. Outlines key technologies for hydrogen production and their emerging applications. Includes innovative approaches to the research and applications of hydrogen, including hydrotreating technologies, fuel cell vehicles, and green fuel synthesis. The aerospace sector, pharmaceuticals, carbon dioxide hydrogenation, and bio-oils upgrading. Serves as a reference for chemical, biochemical, and mechanical engineers, physicists, chemists, biologists, and biomedical scientists working in sustainable energy and materials.

, 1997 Modern Revolutions John Dunn, 1989-06-22 Many political regimes today draw such legitimacy as they have from a revolution the destruction of an existing political elite and its replacement by a different group or groups drawn from inside the same society A large part of the ideological dispute in world politics has come in consequence to turn on an interpretation of the character of revolutions as political and social events It is extremely difficult to separate ideological assessments of the desirability or otherwise of what has occurred in revolutions from causal explanations of why these revolutions occurred and both major traditions in the analysis of revolutionary phenomena have been damaged by their failure to distinguish clearly between explanation and assessment In examining eight major revolutions of the twentieth century John Dunn helps readers to remedy this state of affairs by thinking for themselves **International Books in Print**
