Jäger,2012-12-06 An overview of recent developments in high performance computing and simulation with special emphasis on the industrial relevance of the presented results and methods The book showcases an innovative combination of the state of the art modeling novel numerical algorithms and the use of leading edge high performance computing systems *Data-Intensive Workflow Management* Daniel C. M. de Oliveira,Ji Liu,Esther Pacitti,2022-06-01 Workflows may be defined as abstractions used to model the coherent flow of

activities in the context of an in silico scientific experiment. They are employed in many domains of science such as bioinformatics, astronomy, and engineering. Such workflows usually present a considerable number of activities and activations, i.e. tasks associated with activities and may need a long time for execution. Due to the continuous need to store and process data efficiently, making them data intensive workflows, high performance computing environments allied to parallelization techniques are used to run these workflows. At the beginning of the 2010s, cloud technologies emerged as a promising environment to run scientific workflows. By using clouds, scientists have expanded beyond single parallel computers to hundreds or even thousands of virtual machines. More recently, Data Intensive Scalable Computing (DISC) frameworks, e.g. Apache Spark and Hadoop, and environments emerged and are being used to execute data intensive workflows. DISC environments are composed of processors and disks in large commodity computing clusters connected using high speed communications switches and networks. The main advantage of DISC frameworks is that they support and grant efficient in memory data management for large scale applications such as data intensive workflows. However, the execution of workflows in cloud and DISC environments raises many challenges such as scheduling workflow activities and activations, managing produced data, collecting provenance data, etc. Several existing approaches deal with the challenges mentioned earlier. This way, there is a real need for understanding how to manage these workflows and various big data platforms that have been developed and introduced. As such, this book can help researchers understand how linking workflow management with Data Intensive Scalable Computing can help in understanding and analyzing scientific big data. In this book, we aim to identify and distill the body of work on workflow management in clouds and DISC environments. We start by discussing the basic principles of data intensive scientific workflows. Next, we present two workflows that are executed in a single site and multi-site clouds, taking advantage of provenance. Afterward, we go towards workflow management in DISC environments and we present in detail solutions that enable the optimized execution of the workflow using frameworks such as Apache Spark and its extensions.

Euro-Par 2009 - Parallel Processing Henk Sips, Dick Epema, Hai-Xiang Lin, 2009-08-22 Euro Par is an annual series of international conferences dedicated to the promotion and the advancement of all aspects of parallel computing. In Euro Par, the field of parallel computing is divided into the four broad categories of theory, high performance cluster and grid, and distributed and mobile computing. These categories are further subdivided into 14 topics that focus on particular areas in parallel computing. The objective of Euro Par is to provide a forum for promoting the development of parallel computing both as an industrial technique and as an academic discipline, extending the frontier of both the state of the art and the state of the practice. The target audience of Euro Par consists of researchers in parallel computing in academic departments, government laboratories, and industrial organizations. Euro Par 2009 was the 15th conference in the Euro Par series and was organized by the Parallel and Distributed Systems Group of Delft University of Technology in Delft, The Netherlands. The previous Euro Par conferences took place in Stockholm, Lyon, Passau, Southampton, Toulouse, Munich,

Manchester Paderborn Klagenfurt Pisa Lisbon Dresden Rennes and Las Palmas de Gran Canaria Next year the conference will be held in Sorrento Italy More information on the Euro Par conference series and organization is available on its website at <http://www.europar.org>
