Now Its My Turn Engineering My Way:

Now It's My Turn Eric Arthur Walker, 1989 *Engineering Justice* Jon A. Leydens, Juan C. Lucena, 2017-11-17 Shows how the engineering curriculum can be a site for rendering social justice visible in engineering for exploring complex socio technical interplays inherent in engineering practice and for enhancing teaching and learning Using social justice as a catalyst for curricular transformation *Engineering Justice* presents an examination of how politics culture and other social issues are inherent in the practice of engineering It aims to align engineering curricula with socially just outcomes increase enrollment among underrepresented groups and lessen lingering gender class and ethnicity gaps by showing how the power of engineering knowledge can be explicitly harnessed to serve the underserved and address social inequalities This book is meant to transform the way educators think about engineering curricula through creating or transforming existing courses to attract retain and motivate engineering students to become professionals who enact engineering for social justice *Engineering Justice* offers thought provoking chapters on why social justice is inherent yet often invisible in engineering education and practice engineering design for social justice social justice in the engineering sciences social justice in humanities and social science courses for engineers and transforming engineering education and practice In addition this book Provides a transformative framework for engineering educators in service learning professional communication humanitarian engineering community service social entrepreneurship and social responsibility Includes strategies that engineers on the job can use to advocate for social justice issues and explain their importance to employers clients and supervisors Discusses diversity in engineering educational contexts and how it affects the way students learn and develop *Engineering Justice* is an important book for today s professors administrators and curriculum specialists who seek to produce the best engineers of today and tomorrow **Minds, Models and Milieux** Roger Frantz, Leslie Marsh, 2016-04-08 This book is a collection of specially commissioned chapters from philosophers economists political and behavioral economists cognitive and organizational psychologists computer scientists sociologists and permutations thereof as befits the polymathic subject of this book Herbert Simon The tripartite of the title Minds Models and Milieux connotes the three inextricably linked areas to which Herbert Simon made the most distinguished of contributions Minds connotes Simon s abiding interest in theorizing human behavior rationality and decision making Models connotes his extensive computer simulation work in the service of his interest in understanding minds but also in the service of minds that are situated in a complex social Milieux This collection while intended to commemorate the centenary of Simon s birth simultaneously offers a timely reassessment of some of his central insights and illustrates the exponentially growing interest in Simon s work from beyond the usual disciplines and constituencies *Hellions of the Deep* Robert Gannon, 1996-01-01 Ultimately World War II was the first war won by technology but within only a few weeks after the war began the U S Navy realized its torpedo program was a dismal failure Submarine skippers reported that most of their torpedoes were either missing the targets or

failing to explode if they did hit The United States had to work fast if it expected to compete with the Japanese Long Lance the biggest and fastest torpedo in the world and Germany's electric and sonar models *Hellions of the Deep* tells the dramatic story of how Navy planners threw aside the careful procedures of peacetime science and initiated radical research gathering together the nation's best scientists and engineers in huge research centers and giving them freedom of experimentation to create sophisticated weaponry with a single goal winning the war The largest center for torpedo work was a requisitioned gymnasium at Harvard University where the most famous names in science worked with the best graduate students from all around the country at the business of war They had to produce tangible weapons to consider production and supply tactics to take orders from the military and in many cases also to teach the military how to use the weapons they developed World War II grew into a chess match played by scientists and physicists and it became the only war in history to be won by weapons invented during the conflict For this book Robert Gannon conducted numerous interviews over a twenty year period with scientists engineers physicists submarine skippers and Navy bureaucrats all involved in the development of the advanced weapons technology that won the war While the search for new weapons was deadly serious stretching imagination and resourcefulness to the limit each day the need was obvious American ships were being blown up daily just outside the Boston harbor These oral histories reveal that in retrospect surprising even to those who went through it the search for the *hellions of the deep* was for many the most exciting period of their lives

Wounded Lions Ronald A. Smith, 2016-04-15

The Jerry Sandusky child molestation case stunned the nation As subsequent revelations uncovered an athletic program operating free of oversight university officials faced criminal charges while unprecedented NCAA sanctions hammered Penn State football and blackened the reputation of coach Joe Paterno In *Wounded Lions* acclaimed sport historian and longtime Penn State professor Ronald A. Smith heavily draws from university archives to answer the How and Why at the heart of the scandal The Sandusky case was far from the first example of illegal behavior related to the football program or the university's attempts to suppress news of it As Smith shows decades of infighting among administrators alumni trustees faculty and coaches established policies intended to protect the university and the football team considered synonymous with its name at all costs If the habits predated Paterno they also became sanctified during his tenure Smith names names to show how abuses of power warped the Penn State Way even with hires like women's basketball coach Rene Portland who allegedly practiced sexual bias against players for decades Smith also details a system that concealed Sandusky's horrific acts just as deftly as it whitewashed years of rules violations coaching malfeasance and player crime while Paterno set records and raised hundreds of millions of dollars for the university A myth shattering account of misplaced priorities *Wounded Lions* charts the intertwined history of an elite university its storied sports program and the worst scandal in collegiate athletic history

Dr. Nurse Dominique A. Tobbell, 2022-12-28 An analysis of the efforts of American nurses to establish nursing as an academic discipline and nurses as valued researchers in the decades after World War II Nurses represent the largest

segment of the U S health care workforce and spend significantly more time with patients than any other member of the health care team Dr Nurse probes their history to examine major changes that have taken place in American health care in the second half of the twentieth century The book reveals how federal and state health and higher education policies shaped education within health professions after World War II Starting in the 1950s academic nurses sought to construct a science of nursing distinct from that of the related biomedical or behavioral sciences that would provide the basis for nursing practice Their efforts transformed nursing s labor into a valuable site of knowledge production and proved how the application of their knowledge was integral to improving patient outcomes Exploring the knowledge claims strategies and politics involved as academic nurses negotiated their roles and nursing s future Dr Nurse highlights how state supported health centers have profoundly shaped nursing education and health care delivery *Memorial Tributes* National Academy of Engineering,1996-11-04 This series presents biographies of deceased members of the National Academy of Engineering

Enabling American Innovation Dian Olson Belanger,1998 Traces engineers struggle to win intellectual financial and organizational recognition within the National Science Foundation This book analyzes the tools and arguments how they altered over time and how budgetary and philosophical debates were played out through organizational manipulation
