## **Nuclear Energy And Nuclear Weapon Proliferation:**

**Nuclear Energy and Nuclear Weapon Proliferation** Stockholm International Peace Research Institute, 2020-11-19 In mid 1980 a second conference for the review of the Non Proliferation Treaty NPT would take place in Geneva Given the importance of preventing or at least slowing down nuclear weapon proliferation this conference would be a crucial event in the field of arms control and disarmament For many countries the technical and economic barriers to proliferation had disappeared and the only remaining barriers were political In an attempt to contribute to the discussions at the NPT Review Conference SIPRI assembled a group of experts from a number of countries to discuss the technical aspects of the control of fissionable materials in non military applications The meeting took place in Stockholm 12-16 October 1978 Originally published in 1979 this book on nuclear energy and nuclear weapon proliferation contains the papers presented at the symposium and reflects the discussions at the meeting **Nuclear Proliferation and the Third World** T. T. Poulouse, 1982

*Nuclear Energy and Nuclear Weapon Proliferation*, 1979 *Nuclear Power and the Spread of Nuclear Weapons* Paul Leventhal, Sharon Tanzer, Steven Dolley, 2002 In the wake of California's energy crisis policymakers rush to satisfy growing demand requirements may run the risk of naively ignoring the larger issues and dangers associated with increased reliance on nuclear power A connection between national nuclear power programs and nuclear proliferation can be found in the strategic initiatives of North Korea Iraq Iran India and Pakistan In response to this threat the Nuclear Control Institute has assembled a consortium of experts to underscore the connection that exists between nuclear power and the proliferation of nuclear weapons They evaluated proliferation risks and proposed viable alternative energy sources This volume includes the analysis of such respected thinkers as Pulitzer Prize winning author Richard Rhodes Rep Edward Markey D Mass Amory Lovins CEO of the Rocky Mountain Institute and Amb Robert Galucci dean of the Georgetown University School of Foreign Service *Uranium Enrichment and Nuclear Weapon Proliferation* Allan S. Krass, Peter Boskma, Boelie Elzen, Wim A. Smit, Stockholm International Peace Research Institute, 2020-11-20 Originally published in 1983 this book presents both the technical and political information necessary to evaluate the emerging threat to world security posed by recent advances in uranium enrichment technology Uranium enrichment has played a relatively quiet but important role in the history of efforts by a number of nations to acquire nuclear weapons and by a number of others to prevent the proliferation of nuclear weapons For many years the uranium enrichment industry was dominated by a single method gaseous diffusion which was technically complex extremely capital intensive and highly inefficient in its use of energy As long as this remained true only the richest and most technically advanced nations could afford to pursue the enrichment route to weapon acquisition But during the 1970s this situation changed dramatically Several new and far more accessible enrichment techniques were developed stimulated largely by the anticipation of a rapidly growing demand for enrichment services by the world wide nuclear power industry This proliferation of new techniques coupled with the subsequent contraction of the commercial

market for enriched uranium has created a situation in which uranium enrichment technology might well become the most important contributor to further nuclear weapon proliferation. Some of the issues addressed in this book are: A technical analysis of the most important enrichment techniques in a form that is relevant to analysis of proliferation risks; A detailed projection of the world demand for uranium enrichment services; A summary and critique of present institutional non-proliferation arrangements in the world enrichment industry; and An identification of the states most likely to pursue the enrichment route to acquisition of nuclear weapons.

**Non-Proliferation** Stockholm International Peace Research Institute, 2020-11-19. Is the appearance of new nuclear weapon states inevitable? Who are the sponsors and apologists of nuclear weapons and why are others in favour of renouncing them? What are the implications for international security of the increasingly wide use of nuclear energy? How can nuclear threats be defused? Originally published in 1985, SIPRI's study suggests some answers to these questions. The book examines the situation in a number of countries of key importance for non-proliferation: the two nuclear weapon states which have declined to join the 1968 Non-Proliferation Treaty (China and France); a group of nuclear threshold states also remaining outside the Treaty (Argentina, Brazil, India, Israel, Pakistan, South Africa and Spain); and a group of states both developed and developing which for various reasons have joined the Treaty (Canada, Egypt, South Korea, Sweden, Switzerland and Taiwan). The focus of the book is on motivations for and against nuclear proliferation. An analysis of these motivations leads the editor to make detailed recommendations aimed at halting the spread of nuclear weapons. Appendices include a list of nuclear facilities in the countries studied, specifying the degree of their coverage by international controls and other relevant documentation.

**Nuclear Weapons Proliferation in the Next Decade** Peter Lavoy, 2020-09-23. The intensification of the Iranian and North Korean nuclear crises has created new fears that deteriorating security conditions in the Middle East, Northeast Asia and other regions will lead additional countries to seek their own nuclear arsenals in the years to come. This special issue examines the factors that are likely to shape nuclear weapons proliferation over the next decade. The internationally recognized authors of this issue, many of whom are prominent scholars and others of whom have held influential governmental positions with responsibility for countering nuclear proliferation, bring to light the conditions and events that might drive new countries to pursue nuclear weapons; the indicators and cautionary signs that can provide early warning that a country is interested in building nuclear bombs; and the policy and military measures that can be adopted to prevent or at least dissuade new proliferators. The introductory chapter develops a novel analytical approach focusing on the role of nuclear myths and mythmakers, and the subsequent chapters draw on this approach to help analysts better understand and policy makers better manage nuclear proliferation over the next ten years.

*Internationalization to Prevent the Spread of Nuclear Weapons* Stockholm International Peace Research Institute, 2020-11-19. First published in 1980, the original blurb

read In August September 1980 the second Review Conference of the Non Proliferation Treaty NPT will take place in Geneva As this Treaty is the most important barrier to the proliferation of nuclear weapons the results of the Conference will obviously have major effects in the field of arms control and disarmament The implications of the recent International Nuclear Fuel Cycle Evaluation INFCE are that the technological capabilities of many countries are such that there is no technical solution to the problem of the spread of nuclear weapons to countries that do not now have them Thus it appears that if there is a solution at all it must be political in nature A possible element in such a political solution is the internationalization of the sensitive parts of the nuclear fuel cycle that is those parts that have the potential of producing fissile materials to make nuclear weapons Although the intricacies of a system of internationalization are still unresolved the concept if realized would provide another powerful political barrier to nuclear weapon proliferation a reinforcement for the aims of the NPT itself Against this background and as a follow up to its first symposium and the resultant book Nuclear Energy and Nuclear Weapon Proliferation SIPRI convened a second international group of experts to continue its discussions of issues pertinent to the forthcoming NPT Review Conference The meeting took place at SIPRI in Stockholm 31 October 2 November 1979 when the feasibility of internationalizing the nuclear fuel cycle was examined SIPRI s views on this complex approach are expressed in Part 1 of this book Internationalization to Prevent the Spread of Nuclear Weapons Part 2 contains the papers that were presented at the symposium

**Curbing the Spread of Nuclear Weapons** Ian Bellany, 2013-07-19 Provides a fully detailed but accessible and accurate introduction to the technical aspects of nuclear energy and nuclear weapons Demonstrates that international security is unlikely to benefit from encouraging the spread of nuclear weapons Includes a full discussion of the phenomenon of nuclear free zones with particular emphasis on the zone covering Latin America Frankly appraises the International Atomic Energy Agency s safeguards system

Nuclear Energy David Bodansky, 2007-06-25 This second edition represents an extensive revision of the first edition though the motivation for the book and the intended audiences as described in the previous preface remain the same The overall length has been increased substantially with revised or expanded discussions of a number of topics including Yucca Mountain repository plans new reactor designs health effects of radiation costs of electricity and dangers from terrorism and weapons proliferation The overall status of nuclear power has changed rather little over the past eight years Nuclear reactor construction remains at a very low ebb in much of the world with the exception of Asia while nuclear power s share of the electricity supply continues to be about 75% in France and 20% in the United States However there are signs of a heightened interest in considering possible nuclear growth In the late 1990s the U S Department of Energy began new programs to stimulate research and planning for future reactors and many candidate designs are now contending at least on paper to be the next generation leaders Outside the United States the commercial development of the Pebble Bed Modular Reactor is being pursued in South Africa a French German consortium has won an order from Finland for the long planned EPR European Pressurized Water Reactor and new

reactors have been built or planned in Asia In an unanticipated positive development for nuclear energy the capacity factor of U S reactors has increased dramatically in recent years and most operating reactors now appear headed for 20 year license renewals      **Nuclear Power and Nonproliferation** William C.
