Polymeric Dental Materials:

Polymeric Dental Materials Michael Braden, Richard L. Clarke, John Nicholson, Sandra Parker, 2012-12-06 Braden and his coauthors give a comprehensive overview of the use of polymers and polymer composites as dental materials. These comprise polyelectrolyte based materials, elastomers, glassy and crystalline polymers and fibres. Such materials are used in dentistry as restorative materials, hard and soft prostheses and impression materials. The chemistry of materials is reviewed together with mechanical, thermal, visco elastic and water solution properties. These properties are related to clinical performance with emphasis on some of the difficulties inherent in developing materials for oral use. Indications are given of possible future developments.

Biomedical and Dental Applications of Polymers Charles Gebelein, F. Koblitz, 2013-11-11 The development and use of medical and dental materials are highly interdisciplinary endeavors which require expertise in chemistry, materials science, medicine and or dentistry, mechanics and design engineering. The Symposium upon which this treatise is based was organized to bring members from these communities together to explore problems of mutual interest. The biomaterials which are used in medical or dental prostheses must not only exhibit structural stability and provide the desired function but they must also perform over extended periods of time in the environment of the body. The latter is a very stringent requirement. The oral and other physiological environments are designed by nature to break down many organic substances. Also of importance is the

requirement that materials used in the prosthesis not have a deleterious effect on body tissues Most foreign to the body substances are somewhat toxic to human tissues in fact few factors are more limiting in the medical prosthesis field than the biocompatibility problem Some of these problems and the attempts to solve them are discussed in this volume Dentistry.
