*The Dream Machine* M. Mitchell Waldrop,2018-09-25 The story of the man who instigated the work that led to the internet and shifted our understanding of what computers could be Behind every great revolution is a vision and behind perhaps the greatest revolution of our time is the vision of J C R Licklider He did not design the first personal computers or write the software that ran on them nor was he involved in the legendary early companies that brought them to the forefront of our everyday experience He was instead a relentless visionary who saw the potential in the way that individuals could

interact with computers and software At a time when computers were a short step removed from mechanical data processors Licklider was writing treatises on human computer symbiosis computers as communication devices and a now not so unfamiliar Intergalactic Network His ideas became so influential his passion so contagious that author M Mitchell Waldrop calls him computing s Johnny Appleseed In a simultaneously compelling personal narrative and comprehensive historical exposition Waldrop tells the story of the man who not only instigated the work that led to the internet but also shifted our understanding of what computers were and could be This Stripe Press edition also includes the original texts of Licklider s three most influential writings Man Computer Symbiosis 1960 which outlines the vision that led to the personal computer revolution of the 1970s his Intergalactic Network memo 1963 which outlines the vision that inspired the internet and The Computer as a Communication Device 1968 coauthored with Robert Taylor which amplifies his vision for what the network could become Computerworld ,1974-09-04 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network **Critical Connections** United States. Congress. Office of Technology Assessment,1990 **Cognition and Interaction: From Computers to Smart Objects and Autonomous Agents** Amon Rapp,Maurizio Tirassa,Tom Ziemke,2019-10-10 Cognitive sciences have been involved under numerous accounts to explain how humans interact with technology as well as to design technological instruments tailored to human needs As technological advancements in fields like wearable and ubiquitous computing virtual reality robotics and artificial intelligence are presenting novel modalities for interacting with technology there are opportunities for deepening exploring and even rethinking the theoretical foundations of human technology use This volume entitled Cognition and Interaction From Computers to Smart Objects and Autonomous Agents is a collection of articles on the impacts that novel 3 September Frontiers in Psychology 2019 Cognition and Interaction interactive technologies are producing on individuals It puts together 17 works spanning from research on social cognition in human robot interaction to studies on neural changes triggered by Internet use that tackle relevant technological and theoretical issues in human computer interaction encouraging us to rethink how we conceptualize technology its use and development The volume addresses fundamental issues at different levels The first part revolves around the biological impacts that technologies are producing on our bodies and brains The second part focuses on the psychological level exploring how our psychological characteristics may affect the way we use understand and perceive technology as well as how technology is changing our cognition The third part addresses relevant theoretical problems presenting reflections that aim to reframe how we conceptualize ourselves technology and interaction itself Finally the last part of the volume pays attention to the factors involved in the design of technological artifacts providing suggestions on how we can develop novel technologies closer to human needs Overall it appears that human computer interaction will have to

face a variety of challenges to account for the rapid changes we are witnessing in the current technology landscape
