Gamou** George Gamow,1944 *The Adventures of Mr. Tompkins* Igor Gamow,2009-12-23 Mr Tompkins the inquisitive bank clerk created by esteemed physicist George Gamow in 1937 returns in a new graphic textbook companion to the popular new video series Join Tompkins as he learns about gravity from Albert Einstein explores the atom with Ernest Rutherford and gets a radioactive guided tour by Marie Curie **Science Fact and Science Fiction** Brian Stableford,2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings Science Fact and Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed

Reading Popular Physics Elizabeth Leane,2017-03-02 Reading Popular Physics is a valuable contribution to our understanding of the nature and implications of physics popularizations A literary critic trained in science Elizabeth Leane treats popular science writing as a distinct and significant genre focusing particularly on five bestselling books Stephen Hawking s *A Brief History of Time* Steven Weinberg s *The First Three Minutes* James Gleick s *Chaos* M Mitchell Waldrop s *Complexity* and Gary Zukav s *The Dancing Wu Li Masters* Leane situates her examination of the texts within the heated interdisciplinary exchanges known as the Science Wars focusing specifically on the disputed issue of the role of language in science Her use of literary analysis reveals how popular science books function as sites for disciplinary skirmishes as she uncovers the ways in which popularizers of science influence the public In addition to their explicit discussion of scientific concepts Leane argues these authors employ subtle textual strategies that encode claims about the nature and status of scientific knowledge claims that are all the more powerful because they are unacknowledged Her book will change the way

these texts are read offering readers a fresh perspective on this highly visible and influential genre

[A Final Story](#) Nasser Zakariya, 2017-11-14 Towards a Final Story is the first history of the modern scientific epic These epic stories pull together our knowledge of the universe uniting material and biological origins from beginning to end The authors of these epics among them Carl Sagan E O Wilson and Steven Weinberg saw their task as providing an integrated schema that would not only bring together but also go beyond the particular scientific results and disciplines available as they wrote their histories Nasser Zakariya traces how such epic stories could achieve what they claimed how they inhabit culture and politics and how they arrived at the present moment from a period in the previous century when inquiries into ultimate origins were regarded by many as unscientific and unanswerable These prominent popular historical narratives of science are important forms of knowledge in their own right They expose what science means in the wider culture and at the same time focus attention on the near paradoxical nature of a universal history narrated by humanity for humanity

Mapping the Heavens Priyamvada Natarajan, 2016-04-28 A theoretical astrophysicist explores the ideas that transformed our knowledge of the universe over the past century The cosmos once understood as a stagnant place filled with the ordinary is now a universe that is expanding at an accelerating pace propelled by dark energy and structured by dark matter Priyamvada Natarajan our guide to these ideas is someone at the forefront of the research an astrophysicist who literally creates maps of invisible matter in the universe She not only explains for a wide audience the science behind these

essential ideas but also provides an understanding of how radical scientific theories gain acceptance The formation and growth of black holes dark matter halos the accelerating expansion of the universe the echo of the big bang the discovery of exoplanets and the possibility of other universes these are some of the puzzling cosmological topics of the early twenty first century Natarajan discusses why the acceptance of new ideas about the universe and our place in it has never been linear and always contested even within the scientific community And she affirms that shifting and incomplete as science always must be it offers the best path we have toward making sense of our wondrous mysterious universe Part history part science all illuminating If you want to understand the greatest ideas that shaped our current cosmic cartography read this book
