

Importance of Biodiversity

□ 3.1.1 Biodiversity is the total diversity of living systems and it exists at several levels.

- Biodiversity refers to the variety of life on Earth at all levels, from genes to ecosystems
- Three major levels of biodiversity:
 - Habitat diversity: Variety of physical environments (forests, wetlands, deserts, coral reefs)
 - Diverse habitats provide different niches and microclimates
 - Regions with many distinct habitats support greater biodiversity
 - Species diversity: Number of species and abundance of each species in a location
 - Richness: Number of different species in an area
 - Evenness: Relative abundance of each species
 - High species diversity allows ecosystems to function effectively through various ecological roles
 - Genetic diversity: Variation of genes within individuals and populations
 - Allows species to adapt to changing environmental conditions
 - Increases chances of survival over time
 - Examples: Cheetahs (low diversity, vulnerable to disease), bananas (genetically identical crops, susceptible to pests), coral reefs (high diversity, more resilient)

□ 3.1.2 The components of diversity contribute to the resilience of ecological systems.

- Resilience refers to an ecosystem's ability to resist change and return to equilibrium despite disturbances
- Ecosystem complexity and resilience
 - More connections allow species to shift between food sources when disruptions occur
 - Negative feedback loops help restore balance after disturbance
 - Greater genetic diversity enhances adaptation to environmental changes
- Stage of succession influences resilience:
 - Pioneer communities (early succession): Simple, low biodiversity, less resilient
 - Climax communities (mature): Complex, high biodiversity, more resilient
- Limiting factors and ecosystem health:
 - High productivity promotes high biodiversity and complex food webs

The Common Good and Environmental Governance for the Support of Life Laura Westra, 2016-08-17 The ongoing environmental crisis has given rise to grave concerns everywhere and a number of authors have approached this topic from various disciplines and points of view proposing different strategies to address and correct the situation A major problem however is presented by the role and possible efficiency of existing legal regimes most of which do not consider seriously the ecological problems that are the basis of most of the global problems that beset us In 2015 Italy hosted the 2015 Expo of Milano an important fair that attempted to address some of these major issues primarily the availability of safe food and water and the legal regimes that govern their distribution The conference that resulted in this volume took place at the University of Parma an old university in a city roughly one hour away This volume discusses a variety of environmental and ecological issues from the standpoint of existing legal instruments with a primary focus on the necessity for ecologically oriented governance in order to mitigate and redress a situation that at present supports multiple human rights violations

The Life Cycles of the Council on Environmental Quality and the Environmental Protection Agency James K. Conant, Peter J. Balint, 2016-02-16 In 1970 due to increasing public concern about the environment a dramatic series of bipartisan actions were taken to expand the national government's efforts to control pollutants In that year the Congress and President Nixon established two key federal agencies to address the nation's growing environmental problems the Council on Environmental Quality CEQ and the Environmental Protection Agency EPA But despite this initial recognition of the pressing problems presented by environmental degradation support for related policymaking and administration waxed and waned over the next

thirty five years as other domestic and foreign policy problems rose to the top of the public and legislative agendas What does the future hold for environmental policy in the United States given the highly polarized politics surrounding the issue today In this book James K Conant and Peter J Balint examine what happened to the CEQ and EPA between 1970 and 2010 by using changes in leadership and budgetary resources as key indicators of the agencies vitality and capacity for implementing pollution control laws They also examine correlations between the agencies fortunes and various social political and economic variables The authors conclude with several scenarios about what the future holds for these important environmental agencies

Life Cycle Assessment and Environmental Impact of Polymeric Products T. J. O'Neill,2003 This review describes the process of life cycle analysis in some detail It describes the different organisations involved in researching and applying these techniques and the database resources being used to generate

comparative reports The overview explains the factors to be considered the terminology the organisations involved in developing these techniques and the legislation which is driving the whole process forward The ISO standards relating to environmental management are also discussed briefly in the document Design for the environment is covered in the report This review is accompanied by summaries of selected papers on life cycle analysis and environmental impact from the Rapra Polymer Library database International Handbook of Research on Environmental Education Robert B. Stevenson, Robert Stevenson, 2013 The environment and contested notions of sustainability are increasingly topics of public interest political debate and legislation across the world Environmental education journals now publish research from a wide variety of methodological traditions that show linkages between the environment health development and education The growth in scholarship makes this an opportune time to review and synthesize the knowledge base of the environmental education EE field The purpose of this 51 chapter handbook is not only to illuminate the most important concepts findings and theories that have been developed by EE research but also to critically examine the historical progression of the field its current debates and controversies what is still missing from the EE research agenda and where that agenda might be headed Published for the American Educational Research Association AERA *Integration of environment and nutrition in life cycle assessment of food items: Opportunities and challenges* McLaren, S., Berardy, A., Henderson, A., Holden, N., Huppertz, T., Jolliet, O., De Camillis, C., Renouf, M., Rugani, B, 2021-12-23 This report is the outcome of a consensus building project to agree on best practices for environmental and nutritional Life Cycle Assessment nLCA methodology and identify future research needs The project involved 30 nutritional and environmental LCA researchers from 18 countries It focused on the assessment of food items as opposed to meals or diets Best practice recommendations were developed to address the intended purpose of an LCA study and related modeling approach choice of an appropriate functional unit assessment of nutritional value and reporting nLCA results An nLCA study should report the quantities of as many essential nutrients as possible and aim to provide information on the nutritional quality and or health impacts in addition to nutrient quantities Outstanding issues requiring further research attention include defining a minimum number of nutrients to be considered in an nLCA study treatment of nutrients to limit use of nutrient indexes further development of Impact Assessment methods representation of nutritional changes that may occur during subsequent distribution and food preparation in cradle to gate nLCA studies and communication of data uncertainty and variability More data are required for different regions particularly developing countries for the processing distribution retail and consumption life cycle stages and for food loss and waste Finally there is a need to extend nLCA methodology for the assessment of meals and diets to consider further how to account for the multi functionality of food in a sustainability framework and to set nLCA studies within the context of environmental limits These results provide a robust basis for improving nLCA methodology and applying it to identify solutions that minimize the trade offs between nourishing populations and safeguarding the environment *Nature and the Environment in Amish Life* David

L. McConnell, Marilyn D. Loveless, 2018-11-01 The Amish relationship to the environment is much more complicated than you might think The pastoral image of Amish communities living simply and in touch with the land strikes a deep chord with many Americans Environmentalists have lauded the Amish as iconic models for a way of life that is local self sufficient and in harmony with nature But the Amish themselves do not always embrace their ecological reputation and critics have long questioned the portrayal of the Amish as models of environmental stewardship In Nature and the Environment in Amish Life David L McConnell and Marilyn D Loveless examine how this prevailing notion of the environmentally conscious Amish fits with the changing realities of their lives Drawing on 150 interviews conducted over the course of 7 years as well as a survey of household resource use among Amish and non Amish people they explore how the Amish understand nature in their daily lives and how their actions impact the natural world Arguing that there is considerable diversity in Amish engagements with nature at home at school at work and outdoors McConnell and Loveless show how the Amish response to regional and global environmental issues such as watershed pollution and climate change reveals their deep skepticism of environmentalists They also demonstrate that Amish households are not uniformly lower in resource use compared to their rural non Amish neighbors though aspects of their home economy are relatively self sufficient The first comprehensive study of Amish understandings of the natural world this compelling book complicates the image of the Amish and provides a more realistic understanding of the Amish relationship with the environment

Brain-Grounded Theory of Temporal and Spatial Design

Yoichi Ando, 2016-03-03 In this book brain grounded theory of temporal and spatial design in architecture and the environment is discussed The author believes that it is a key to solving such global problems as environmental disorders and severe climate change as well as conflicts that are caused by the ill conceived notion of time is money There are three phases or aspects of a person s life the physical life the spiritual or mental life and the third stage of life when a person moves from middle age into old age and can choose what he or she wishes to do instead of simply what must be done This book describes the temporal design of the environment based on the theory of subjective preference which could make it possible for an individual to realize a healthy life in all three phases In his previously published work the present author wrote that the theory of subjective preference has been established for the sound and visual fields based on neural evidence and that subjective preference is an overall response of cooperating temporal and spatial factors associated with the brain s left and right hemispheres respectively In this book based on that theory some examples are shown for the temporal design of architecture and the environment which may play important roles in the development of personality thus inducing creativity Also discussed is how all individuals may find their own personality and develop it according to the preferred direction of their individual lives
