problem of closed geodesics the theory of submanifolds and the structure of the moduli space of isometry classes of Riemannian metrics with curvature bounds on a given manifold Ultimately geometric complexity of a moduli space forces functions defined on that space to have many critical points and new results about the existence of extrema or equilibria follow The main sort of algorithmic problem that arises is recognition is the presented object equivalent to some standard one If it is difficult to determine whether the problem is solvable then the original object has doppelg ngers that is other objects that are extremely difficult to distinguish from it Many new questions emerge about the algorithmic nature of known geometric theorems about dichotomy problems and about the metric entropy of moduli space Weinberger studies them using tools from group theory computability differential geometry and topology all of which he explains before use Since several examples are worked out the overarching principles are set in a clear relief that goes beyond the details of any one problem

Ranks of Elliptic Curves and Random Matrix Theory J. B. Conrey,2007-02-08 This comprehensive volume introduces elliptic curves and the fundamentals of modeling by a family of random matrices **Highly Oscillatory Problems** Bjorn Engquist,2009-07-02 The first book to approach high oscillation as a subject of its own Highly Oscillatory Problems begins a new dialogue and lays the groundwork for future research It ensues from the six month programme held at the Newton Institute of Mathematical Sciences which was the first time that different specialists in highly oscillatory research from diverse areas of mathematics and applications had been brought together for a single intellectual agenda This ground breaking volume consists of eight review papers by leading experts in subject areas of active research with an emphasis on computation numerical Hamiltonian problems highly oscillatory quadrature rapid approximation of functions high frequency wave propagation numerical homogenization discretization of the wave equation high frequency scattering and the solution of elliptic boundary value problems **Computational and Geometric Aspects of Modern Algebra** Michael D. Atkinson,Michael Atkinson,2000-06-15 This book comprises a collection of papers from participants at the IMCS Workshop on Computational and Geometric Aspects of Modern Algebra held at Heriot Watt University in 1998 Written by leading researchers the papers cover a wide range of topics in the vibrant areas of word problems in algebra and geometric group theory This book represents a timely record of recent work and provides an indication of the key areas of future development

Surgery on Compact Manifolds C. T. C. Wall,2024-11-18 The publication of this book in 1970 marked the culmination of a particularly exciting period in the history of the topology of manifolds The world of high dimensional manifolds had been opened up to the classification methods of algebraic topology by Thom s work in 1952 on transversality and cobordism the signature theorem of Hirzebruch in 1954 and by the discovery of exotic spheres by Milnor in 1956 In the 1960s there had been an explosive growth of interest in the surgery method of understanding the homotopy types of manifolds initially in the differentiable category including results such as the h cobordism theory of Smale 1960 the classification of exotic spheres by Kervaire and Milnor 1962 Browder s converse to the Hirzebruch signature theorem for the existence of a manifold in a

simply connected homotopy type 1962 the s cobordism theorem of Barden Mazur and Stallings 1964 Novikov s proof of the topological invariance of the rational Pontrjagin classes of differentiable manifolds 1965 the fibering theorems of Browder and Levine 1966 and Farrell 1967 Sullivan s exact sequence for the set of manifold structures within a simply connected homotopy type 1966 Casson and Sullivan s disproof of the Hauptvermutung for piecewise linear manifolds 1967 Wall s classification of homotopy tori 1969 and Kirby and Siebenmann s classification theory of topological manifolds 1970 The original edition of the book fulfilled five purposes by providing a coherent framework for relating the homotopy theory of manifolds to the algebraic theory of quadratic forms unifying many of the previous results a surgery obstruction theory for manifolds with arbitrary fundamental group including the exact sequence for the set of manifold structures within a homotopy type and many computations the extension of surgery theory from the differentiable and piecewise linear categories to the topological category a survey of most of the activity in surgery up to 1970 a setting for the subsequent development and applications of the surgery classification of manifolds This new edition of this classic book is supplemented by notes on subsequent developments References have been updated and numerous commentaries have been added The volume remains the single most important book on surgery theory   **Theory of P-adic Distributions** S. Todd,2009-07-02 Surveys and summaries of the latest research in numerical analysis optimization computer algebra and scientific computing   Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces M. Bachir Bekka,Matthias Mayer,2000-05-11 This book first published in 2000 focuses on developments in the study of geodesic flows on homogenous spaces   Corings and Comodules Tomasz Brzezinski,Robert Wisbauer,2003-09-15 This is the first extensive treatment of the theory of corings and their comodules In the first part the module theoretic aspects of coalgebras over commutative rings are described Corings are then defined as coalgebras over non commutative rings Topics covered include module theoretic aspects of corings such as the relation of comodules to special subcategories of the category of modules sigma type categories connections between corings and extensions of rings properties of new examples of corings associated to

entwining structures generalisations of bialgebras such as bialgebroids and weak bialgebras and the appearance of corings in non commutative geometry
