Nuclear Energy Promise Or Peril:

Nuclear Energy B. van der Zwaan, 1999 Nuclear energy will inevitably become an important issue worldwide in the 21st century It pollutes the environment with consequences that are highly controversial and it generates plutonium the essential component of nuclear weapons At the same time it is a realistic alternative to at least some of the expected huge increase in global demand for fossil fuel burning which itself is a major source of environmental pollution and not least of greenhouse gases This invaluable book attempts to provide for the non technical reader an objective and critical account of the main issues involved The authors are authorities in their own fields and their contributions have been read in manuscript discussed and criticised by a wider international group of experts Thus whilst much of its contents may arouse controversy the book should be an excellent starting point for informed public discussion of a vitally important topic *Nuclear Power*
