Nuclear Waste A Technological And Political Challenge:

Nuclear Waste Piero Risoluti, 2013-06-29 Foreword Over the past decades Piero Risoluti has built up an intimate knowledge of the nuclear industry in particular of nuclear waste management In this book his scientific understanding is apparent for example in his comprehensive but readily understandable descriptions of waste conditioning and disposal Moreover he has also been directly involved in the wider societal and political debates in the nuclear area especially in his Italian homeland What shines through in these pages is his frustration at the lack of progress in implementing disposal concepts that are judged by many to be very safe and his unfaltering drive to improve this situation To provoke debate the book is very deliberately written in a polarising black and white style that can easily be labelled as politically incorrect a characterisation that Piero will probably agree with and be amused by Criticism is directed equally at loud mouthed and incompetent anti nuclear environmentalists the nuclear Byzantium of the international nuclear establishment the intellectual narcissism of those nuclear experts that dare to admit the importance of societal issues and the tendency of politicians to indefinite procrastination These are not words chosen to avoid open confrontation of opposing views Challenges of Nuclear Waste Governance Achim Brunnengräber, Maria Rosaria Di Nucci, Ana María Isidoro Losada, Lutz Mez, Miranda A.

Schreurs, 2018-03-17 This is volume two of a comparative analysis of nuclear waste governance and public participation in decision making regarding the storage and siting of high level radioactive waste and spent fuel in different countries The contributors examine both the historical and current approaches countries have taken to address the wicked challenge of nuclear waste governance The analyses discuss the regulations technology choices safety criteria costs and financing issues compensation schemes institutional structures and approaches to public participation found in each country Nuclear Waste Politics Matthew Cotton, 2017-07-14 The question of what to do with radioactive waste has dogged political administrations of nuclear powered electricity producing nations since the inception of the technology in the 1950s As the issue rises to the forefront of current energy and environmental policy debates a critical policy analysis of radioactive waste management in the UK provides important insights for the future Nuclear Waste Politics sets out a detailed historical and social scientific analysis of radioactive waste management and disposal in the UK from the 1950s up to the present day drawing international comparisons with Sweden Finland Canada and the US A theoretical framework is presented for analysing nuclear politics blending literatures on technology policy environmental ethics and the geography and politics of scale The book proffers a new theory of ethical incrementalism and practical policy suggestions to facilitate a fair and efficient siting process for radioactive waste management facilities The book argues that a move away from centralised high capital investment national siting towards a regional approach using deep borehole disposal could resolve many of the problems that the high stakes inflexible megaproject approach has caused across the world This book is an important resource for academics and researchers in the areas of environmental management energy policy and science and

Decision Making for Complex Socio-Technical Systems Thomas

Flüeler,2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution
