**Nuclear Weapons** Joseph Rotblat, 2021-11-28 This volume of essays a map of the road to zero gives the reader a primer on the current state of nuclear disarmament provides an up to date argument for the merits of a nuclear weapon free world and outlines the steps needed to attain that goal Its editor is Joseph Rotblat the 1995 Nobel Peace Prize winner The volume assesses recent efforts by scholars military leaders and political figures in advocating the elimination of nuclear weapons It brings to focus the major dilemmas of disarmament including verification nuclear theft and diplomatic and security issues and argues for why these obstacles must be overcome Finally a comprehensive review of the steps needed to achieve a nuclear weapon free world is presented Over the past decade the concept of a world free of all nuclear weapons has transformed from a fanciful dream to a subject of serious study and action Will it be possible for the international community to agree not simply to reduce the number of nuclear weapons to low levels but to reduce it to zero This volume of essays a map of the road to zero gives the reader a primer on the current state of nuclear disarmament provides an up to date argument for the merits of a nuclear weapon free world and outlines the steps needed to attain that goal Its editor is Joseph Rotblat the 1995 Nobel Peace Prize winner The volume assesses recent efforts by scholars military leaders and political figures to advocate the elimination of nuclear weapons It brings to focus the major dilemmas of disarmament including verification nuclear theft and diplomatic and security issues and argues for why these obstacles must be overcome Finally a comprehensive review of the steps needed to achieve a nuclear weapon free world is presented

**Path to Zero** Richard A. Falk, David Krieger, 2015-12-22 The Path to Zero argues that it is time to re open the public debate on nuclear weapons In a series of clear and well reasoned dialogues long time scholars and peace activists Richard Falk and David Krieger probe key questions about our nuclear capability and dig beneath the secrecy that has largely surrounded its existence Falk and Krieger argue that Hiroshima and Nagasaki were only the beginning In recent times nuclear annihilation at the hands of rogue states and terrorists has become an even greater concern than the spectre of nuclear war between superpowers The Path to Zero argues that whilst none of us has the power to bring about global change alone together we are immensely powerful powerful enough to overcome the threats of the Nuclear Age and move us appreciably along the path to zero

**The Evolution of Cyber War** Brian M. Mazanec, 2015-11-01 In January 2014 Pope Francis called the Internet a gift from God Months later former Secretary of Defense Leon Panetta described cyber warfare as the most serious threat in the 21st century capable of destroying our entire infrastructure and crippling the nation Already cyber warfare has impacted countries around the world Estonia in 2007 Georgia in 2008 and Iran in 2010 and as with other methods of war cyber technology has the ability to be used not only on military forces and facilities but on civilian targets Our computers have become spies and tools for terrorism and have allowed for a new unchecked method of war And yet cyber warfare is still in its infancy with innumerable possibilities and contingencies for how such a war may play out in the coming decades Cyber War

Taboo The Evolution of Norms for Emerging Technology Weapons from Chemical Weapons to Cyber Warfare examines the international development of constraining norms for cyber warfare and predicts how those norms will unfold in the future Using case studies for other emerging technology weapons chemical and biological weapons strategic bombing and nuclear weapons author Brian Mazanec expands previous definitions of norm evolution theory and offers recommendations for citizens and U S policymakers and as they grapple with the impending reality of cyber war The Obama Administration's Nuclear Weapon Strategy Aiden Warren,2013-07-24 This book comprehensively outlines and evaluates the key Obama nuclear weapons policies developments and initiatives from 2008 2012 Beginning with the administration s vision and goals posited in the 2009 Prague Speech and reaffirmed in the National Security Strategy of 2010 the book assesses the congressionally mandated Nuclear Posture Review the New START Treaty the pursuit of Comprehensive Nuclear Test Ban Treaty ratification the Proliferation Security Initiative the Fissile Material Cut off Treaty the Nuclear Non Proliferation Review Conference the Global Nuclear Security Summit and the extent to which Obama in the context of such initiatives has actually upheld the lofty goals posited in Prague and differentiated himself from the nuclear path pursued by the Bush Administration Additionally the book evaluates the Obama Administration s dealings with other states in the context of its nuclear weapons policy in particular North Korea Iran Pakistan Israel India and China Offering a comprehensive analysis of the current status of the US nuclear weapons strategy this volume will be of great interest to scholars and students of American foreign policy security studies and international relations **Bulletin of the Atomic Scientists** ,1998-09 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world **Getting to Zero** Catherine Kelleher,Judith Reppy,2011-03-02 Getting to Zero is an edited volume of chapters about the implications of total nuclear disarmament for international security and national security covering a range of perspectives **On the Horizon** Reja Younis,2021-08-15 The Nuclear Scholars Initiative is a signature program run by the Project on Nuclear Issues PONI at the Center for Strategic and International Studies CSIS to engage emerging nuclear experts in thoughtful and informed debate over how to best address the nuclear community s most pressing problems The papers included in this volume comprise research from participants in the 2020 Nuclear Scholars Initiative These papers explore a variety of topics such as the future of arms control treaties the role of artificial intelligence and cyber resilience in nuclear security and the role of regional dynamics in nuclear security Rethinking the Unthinkable Ivo H. Daalder,Terry Terriff,2014-02-04 Rethinking the Unthinkable examines the future direction of nuclear arms control in the post Cold War security environment Believing that the new environment requires a radical rethinking of the purpose and role of nuclear weapons in international politics the contributors address many fundamental issues influencing further US Russian and European nuclear arms reductions This volume is a product of the Project on Rethinking Arms Control sponsored by the

Center for International and Security Studies in Maryland      Prevention, Pre-emption and the Nuclear Option Aiden Warren, 2012-02-20 Despite its portrayal as a bold departure the Bush Doctrine was not the new or revolutionary policy instrument that many at the time portended This work seeks to argue that while it was clear that the Bush Doctrine certainly qualified as a preventive war policy it is apparent that the adoption of this strategy did not mark a total break with American tradition or earlier Administrations Warren seeks to dispel arguments pertaining to the supposed radical nature of the Bush Doctrine based on comparisons with previous National Security Strategies and previous Administrations penchant for prevention However the work also highlights that what was new and bold about the Bush Administration s National Security Strategy of 2002 was its willingness to embrace reinvigorating a nuclear option that could ultimately be used in the context of preventive war While Obama has struck bold rhetorical notes and promises in relation to limiting the role of nuclear weapons he has stopped short of changing the status quo on critical issues that have lingered since the Cold War such as tactical nuclear weapons and keeping missiles on alert This book s final section examines the extent to which Obama has attempted to adjust the nuclear option with the recent release of the congressionally mandated Nuclear Posture Review NPR Offering new insights into the Bush doctrine and providing a comprehensive analysis of the current status of the US nuclear weapons strategy this volume will be of great interest to scholars and students of American foreign policy security studies and international relations

**CLIMATE CHANGE and the road to NET-ZERO** Mathew Hampshire-Waugh, 2021-06-01 CLIMATE CHANGE and the road to NET ZERO is a story of how humanity has broken free from the shackles of poverty suffering and war and for the first time in human history grown both population and prosperity It s also a story of how a single species has reconfigured the natural world repurposed the Earth s resources and begun to re engineer the climate The book uses these conflicting narratives to explore the science economics technology and politics of climate change NET ZERO blows away the entrenched idea that solving global warming requires a trade off between the economy and environment present and future generations or rich and poor and reveals why a twenty year transition to a zero carbon system is a win win solution for all on planet Earth Reviews Readers Favorite Five Stars An excellent layman s perspective of the climate problem today how it has evolved over time and the different approaches to solving the problem I recommend it highly Mark Z Jacobson Professor of Civil and Environmental Engineering at Stanford University and author of 100% Clean Renewable Energy and Storage for Everything Mathew brings his wide ranging experience of financial markets particularly in modelling and forecasting to add a unique insight to the climate challenge On one hand helping us understand how fossil fuels drove prosperity and let the world s population escape the poverty trap whilst on the other how rising levels of CO2 in the atmosphere placed the world at mortal risk In this book Mathew s financial understanding comes to the fore revealing why we need a sound understanding of economics climate science and financial modelling to give us the signals we need to act today Mark Campanale Executive Chairman of the Carbon Tracker Initiative and founder of the unburnable carbon capital

markets thesis Provides a clear understanding of the technical complexities of reaching zero carbon Hampshire Waugh approaches the subject with intellectual rigour boundless curiosity and compelling story telling A must read for anyone interested in climate change and net zero Vincent Gilles Chief Investment Officer at Clim8 Invest The book that says it all and answers all questions Backed by data analysis and science Hampshire Waugh explains how climate change if left unchecked threatens to unravel 200 years of human progress But it need not end this way The author shows that building a net zero carbon economy is within human reach through focused innovation riding down the experience curve and reaching scale in clean energy technologies and solutions Mathew shows how we can solve climate change and air pollution whilst driving development in the poorest parts of the world and without compromise for those already accustomed to the highest quality of life Geetu Sharma Founder of AlphasFuture LLC a sustainability focused investment business About the Author Dr Mathew Hampshire Waugh has spent the last decade working as an equity analyst at a global investment bank He has worked with the top executives of many multi billion dollar companies and built relationships with many of the world s largest investment managers Mathew s work centred on forecasting technology trends financial performance and the intrinsic value of companies involved in markets including renewable energy electric cars battery technology and biofuels Prior to his career in the banking industry the author gained his doctorate in materials chemistry from University College London where he worked on novel coatings and nano materials for use in energy saving glazing and solar panel design During his doctorate Mathew registered a patent for an efficiency enhancing coating for solar modules published numerous scientific papers and engaged in public speaking consultancy and media outreach From the Author I wrote Climate Change and the road to Net Zero to provide a generalist reader with a clear comprehensive and objective take on the issues surrounding climate change and air pollution The book walks the reader through a history of energy innovation and the rise of human civilisation how scientists have come to understand our past climate and can now forecast future change the problems economists encounter as they attempt to piece together the potential monetary and social damages from climate inaction and a technology agnostic assessment of potential climate change solutions from climate engineering to mitigation including their costs risks and limitations The book demonstrates why sustainable technologies such as wind solar and batteries get cheaper with scale of production not time and why a rapid transition to a fully fledged net zero system will end up significantly cheaper than remaining bound to fossil fuels whilst also avoiding the worst impacts of climate change and preventing nearly eight million premature deaths each year from air pollution I hope Climate Change and the road to Net Zero delivers an understanding of humanity s relationship with Earth that is as intriguing as Simon Lewis and Mark Maslin s The Human Planet or Yuval Noah Harari s Sapiens I very much hope too that the book conveys the passion and call to action of David Wallace Well s The Uninhabitable Earth coupled with the sober economic analysis of The Climate Casino by William Nordhaus or Capital in the 21st century by Thomas Piketty and that it provides the technical rigour of Sustainable Energy Without The Hot Air by David

MacKay the rationality of Hans Rosling's Factfulness and the eternal hope of The Future We Choose by Christiana Figueres and Tom Rivett Carnac I believe net zero will be cheaper cleaner safer more reliable more sustainable and will create more employment than if we remain bound to fossil fuels After reading the book I hope you will agree Mathew Hampshire Waugh Author

**Ending War** Tom Milne, 1999-07-13 World renowned political thinkers and scientists write on nuclear weapons and war in the twenty first century The contributors include Mikhail Gorbachev who first declared A nuclear war cannot be won and must not be fought Robert McNamara US Defense Secretary at the time of the Cuban Missile Crisis and Vietnam War and Nobel Peace Laureate Joseph Rotblat the only scientist to resign from the Manhattan Project where the world's first nuclear weapons were produced

*Global Nuclear Disarmament* V R Raghavan, 2012-08-01 The DPG was chosen as a research institution to assist in the deliberations of the International Commission on Nuclear Non Proliferation and Disarmament constituted by the Australian and Japanese governments The support of the NTI to DPG's efforts has been immense and definitive The first decade of 21st century has seen a resurgence of support for global nuclear disarmament A cascade of nuclear disarmament proposal has emerged from different sources India has consistently favored complete global nuclear disarmament even as it laid the foundations of a nuclear energy programme Notwithstanding the nuclear tests Indian policy on global nuclear disarmament has not been disavowed Global nuclear disarmament is closely linked to geo political conditions Unless such conditions are favourable states are unlikely to take initiatives to either reduce or eliminate their nuclear weapons stockpiles This book examines the geopolitical necessities which will encourage nuclear disarmament globally It also contrasts them with the geopolitical realities currently prevailing which impact on nuclear disarmament The papers in the book bring forth both the challenges and opportunities that lie ahead

*Slaying the Nuclear Dragon* Tanya Ogilvie-White, David Santoro, 2012-03-01 In recent decades the debate on nuclear weapons has focused overwhelmingly on proliferation and nonproliferation dynamics In a series of Wall Street Journal articles however George Shultz William Perry Henry Kissinger and Sam Nunn called on governments to rid the world of nuclear weapons helping to put disarmament back into international security discussions More recently U S president Barack Obama prominent U S congressional members of both political parties and a number of influential foreign leaders have espoused the idea of a world free of nuclear weapons Turning this vision into reality requires an understanding of the forces driving disarmament forward and those holding it back *Slaying the Nuclear Dragon* provides in depth objective analysis of current nuclear disarmament dynamics Examining the political state level factors that drive and stall progress contributors highlight the challenges and opportunities faced by proponents of disarmament These essays show that although conditions are favorable for significant reductions numerous hurdles still exist Contributors look at three categories of states those that generate momentum for disarmament those with policies that are problematic for disarmament and those that actively hinder progress whether openly secretly deliberately or inadvertently Nuclear deterrence was long credited with preventing war between the two major Cold War powers but with

the spread of nuclear technology threats have shifted to other state powers and to nonstate groups

**Slaying the Nuclear Dragon** addresses an urgent need to examine nuclear disarmament in a realistic nonideological manner

**Over the Horizon Proliferation Threats** James Wirtz, Peter Lavoy, 2012-04-25 In every decade of the nuclear era one or two states have developed nuclear weapons despite the international community's opposition to proliferation In the coming years the breakdown of security arrangements especially in the Middle East and Northeast Asia could drive additional countries to seek their own nuclear biological or chemical NBC weapons and missiles This likely would produce greater instability more insecure states and further proliferation Are there steps concerned countries can take to anticipate prevent or dissuade the next generation of proliferators Are there countries that might reassess their decision to forgo a nuclear arsenal This volume brings together top international security experts to examine the issues affecting a dozen or so countries nuclear weapons policies over the next decade In Part I National Decisions in Perspective the work describes the domestic political consideration and international pressures that shape national nuclear policies of several key states In Part II Fostering Nonproliferation the contributors discuss the factors that shape the future motivations and capabilities of various states to acquire nuclear weapons and assess what the world community can do to counter this process The future utility of bilateral and multilateral security assurances treaty based nonproliferation regimes and other policy instruments are covered thoroughly

*Research Handbook on International Arms Control Law* Eric P.J. Myjer, Thilo Marauhn, 2022-12-06 This Research Handbook provides a broad yet detailed treatment of international arms control law It takes stock of existing arms control agreements addresses current challenges and aims to indicate avenues for the future development of this distinct branch of public international law

**Stable Nuclear Zero** Sverre Lodgaard, 2016-08-12 This volume examines the conditions necessary for a stable nuclear weapons free world and the implications for nuclear disarmament policy The Nuclear Non Proliferation Treaty NPT is a road map to nuclear zero but it is a rudimentary one and it says nothing about the kind of zero to aim for Preferably this would be a world where the inhibitions against reversal are strong enough to make it stably non nuclear What then are the requirements of stable zero The literature on nuclear disarmament has paid little attention to this question By and large the focus has been on the next steps and discussions tend to stop where the NPT stops with the elimination of the weapons This book seeks to fill a lacuna by examining the requirements of stable zero and their implications for the road map to that goal starting from the vision to the present day The volume highlights that a clear conception of the goal not only is important in itself but can shed light on what kind of disarmament process to promote This book will be of much interest to students of nuclear proliferation global governance security studies and IR

**Stepping Down the Thermonuclear Ladder** Ivo H. Daalder, 1993

**Norm Antipreneurs and the Politics of Resistance to Global Normative Change** Alan Bloomfield, Shirley V. Scott, 2016-10-04 Over recent decades International Relations scholars have investigated norm dynamics processes at some length with the norm entrepreneur concept having become a

common reference point in the literature The focus on norm entrepreneurs has however resulted in a bias towards investigating the agents and processes of successful normative change This book challenges this inherent bias by explicitly focusing on those who resist normative change norm antipreneurs The utility of the norm antipreneur concept is explored through a series of case studies encompassing a range of issue areas and contributed by a mix of well known and emergent scholars of norm dynamics In examining the complexity of norm resistance particular attention is paid to the nature and intent of the actors involved in norm contestation the sites and processes of resistance the strategies and tactics antipreneurs deploy to defend the values and interests they perceive to be threatened by the entrepreneurs and whether it is the entrepreneurs or the antipreneurs who enjoy greater inherent advantages This text will therefore be of interest to scholars and students of International Relations International Law Political Science Sociology and History Still the Century of Overkill? Paolo Foradori, 2015-03-26 Weapons of mass destruction and their means are still considered by many countries as necessary or at least desirable This collection of essays by leading scholars considers some of the key issues that affect the continued presence and proliferation of weapons of mass destruction in the world today Nuclear Fictions Michael Gardiner, 2024-11-30 In this book Michael Gardiner suggests that the conception of the war ending weapon was tied up with a longer commitment to unified space and singular progress The mission for total weapons can be seen rising with the highly technical defensive war of the later nineteenth century and passing through twentieth century atomic research then the targeting of the outsides of commercial empire and the post war consensus with deterrence as its foundation The end of the Cold War brought an opportunity to fully naturalise deterrence but also brought a tacit acceptance of nuclear violence while forms of violence against the individual were rigorously sought out If the world unifying role of deterrence has always been undermined by the rise of rival empires it has also been questioned by critical communities including the consensus sceptics of the 1950s 60s 1980s 90s Nuclear Criticism and readers of nuclearism millennial campaigns for Scottish independence and twenty first century descriptions of nuclear colonialism Recently it has become more obvious that an Anglosphere concept of worldly deterrence was bound to a singular and ultimately nihilistic idea of progress bio Michael Gardiner is Professor in the Department of English and Comparative Literature at the University of Warwick
