Kanal,E.S. Gelsema,2012-12-02 The 1985 Amsterdam conference brought together researchers active in pattern recognition methodology and the development of practical applications The first part of the book covers various methodological aspects of image processing knowledge based and model driven image understanding systems 3 D reconstruction methods and application oriented papers Part II deals with aspects of statistical pattern recognition the problem of population classification and topics common to both pattern recognition and artificial intelligence **Data Mining in Agriculture** Antonio Mucherino,Petra Papajorgji,Panos M. Pardalos,2009-09-22 Data Mining in Agriculture represents a comprehensive effort to provide graduate students and researchers with an analytical text on data mining techniques applied to agriculture and environmental related fields This book presents both theoretical and practical insights with a focus on presenting the context of each data mining technique rather intuitively with ample concrete examples represented graphically and with algorithms written in Matlab Examples and exercises with solutions are provided at the end of each chapter to facilitate the comprehension of the material For each data mining technique described in the book variants and improvements of the basic algorithm are also given **Artificial Intelligence Paradigms for Application Practice** Shiguo Lian,Zhaoxiang Liu,2025-08-15 This book proposes practical application paradigms for deep neural networks aiming to establish best practices for real world implementation Over the past decade deep neural networks have made significant progress However effectively applying these networks to solve various practical problems remains challenging which has limited the widespread application of artificial intelligence Artificial Intelligence Paradigms for Application Practice is the first to comprehensively address implementation paradigms for deep neural networks in practice The authors begin by reviewing the development of artificial neural networks and provide a systematic introduction to the tasks principles and architectures of deep neural networks They identify the practical limitations of deep neural networks and propose guidelines and strategies for successful implementation The book then examines 14 representative applications in urban planning industrial production and transportation For each case the authors present a landing paradigm that effectively addresses practical challenges supported by illustrations background information related work methods experiments and conclusions The experimental results validate the effectiveness of the proposed implementation approaches The book will benefit researchers engineers undergraduate and graduate students

Agent-Mediated Knowledge Management

Ludger van

Elst, Virginia Dignum, Andreas Abecker, 2004-02-12 In this book we present a collection of papers around the topic of Agent Mediated Knowledge Management Most of the papers are extended and proved versions of work presented at the symposium on Agent Mediated Knowledge Management held during the AAAI Spring Symposia Series in March 2003 at Stanford University The aim of the Agent Mediated Knowledge Management symposium was to bring together researchers and practitioners of the fields of KM and agent technologies to discuss the benefits and added value of cross fertilization Knowledge Management KM has been a predominant trend in business in recent years Not only is Knowledge Management an important field of application for AI and related techniques such as CBR technology for intelligent lessons learned systems it also provides new challenges to the AI community like for example context aware knowledge delivery Scaling up research prototypes to real world solutions usually requires an application driven integration of several basic technologies e.g. ontologies for knowledge sharing and reusable collaboration support like CSCW systems and personalized information services Typical characteristics to be dealt with in such an integration are manifold logically and physically dispersed actors and knowledge sources different degrees of formalization of knowledge different kinds of Web based services and legacy systems conflicts between local individual and global group or organizational goals

Advances in Artificial Intelligence and Machine Learning Applications for the Imaging of Bone and Soft Tissue Tumors

Brandon K. K. Fields, George R. Matcuk Jr., Bino A. Varghese, 2025-01-03 Increasing interest in the development and validation of quantitative imaging biomarkers for oncologic imaging has in recent years inspired a surge in the field of artificial intelligence and machine learning Initial results showed promise in identifying potential markers of treatment response malignant potential and prognostic predictors among others however while many of these early algorithms showed the optimistic ability to separate pathologic states on in house datasets it was often the case that these classifiers generalized poorly on external validation sets and thus were of limited utility in the clinical setting This issue was additionally compounded by the frequent use of data filtering and feature selection techniques in many studies to further bolster the machine learning results in limited case scenarios thereby biasing the overall fit and further reducing generalizability

Machine Intelligence

A. Gomersall, 2013-03-14 In 1981 Robotics Bibliography was published containing over 1 800 references on industrial robot research and development culled from the scientific literature over the previous 12 years It was felt that sensors for use with industrial robots merited a section and accordingly just over 200 papers were included It is a sign of the increased research into sensors in production engineering that this bibliography on both the contact and non contact forms has appeared less than three years after that first comprehensive collection of references appeared In a review in 1975 Professor Warnecke of IPA Stuttgart drew attention to the lack of sensors for touch and vision Since then research workers in various companies universities and national laboratories in the USA the UK Italy

Germany and Japan have concentrated on improving sensor capabilities particularly utilising vision artificial intelligence and pattern recognition principles As a result many research projects are on the brink of commercial exploitation and development This bibliography brings together the documentation on that research and development highlighting the advances made in vision systems but not neglecting the development of tactile sensors of various types No bibliography can ever be comprehensive but significant contributions from research workers and production engineers from the major industrialised countries over the last 12 years have been included *Scientific and Technical Aerospace Reports* ,1986
