Polycyclic Hydrocarbons And Carcinogens:

Environmental Carcinogens G. Grimmer, 2018-01-18 The present survey comprises today's knowledge of environmental pollution in particular of the atmosphere by PAH and of the biological effects of this class of substance putting special emphasis on their carcinogenic activity The research data and conclusions derived therefrom are meant to assist the government of the Federal Republic of Germany in determining an air quality standard **Polycyclic Aromatic**

Andreas Luch, 2005-08-22 This book provides an overview on the molecular mode of action of carcinogenic polycyclic aromatic hydrocarbons PAHs PAHs are by products arising from incomplete combustion of organic matter that are frequently released into our environment and thus are ubiquitously detectable Many PAHs are strong carcinogens in rodent bioassays and have been linked to increased incidences of various types of cancer in humans The present book covers all aspects of PAH induced carcinogenesis it is a collection of articles written by some of the most recognizable PAH researchers reviewing the present knowledge in this field The topics include exposure to and biomonitoring of PAHs in the human population metabolic activation of PAHs genotoxicity and repair of PAH induced DNA damage and factors modulating individual susceptibility to the deleterious effects of PAHs **Polycyclic Hydrocarbons and Carcinogenesis** Ronald G.

cancer Harry Gelboin, 2012-12-02 Polycyclic Hydrocarbons and Cancer Volume 3 explores the link between polycyclic aromatic hydrocarbons PAHs and cancer based on research in the fields of chemistry biology and the medical and social sciences Topics covered include the metabolism of polynuclear aromatic hydrocarbons carcinogenicity of PAHs and their derivatives the role of microsomal epoxide hydrolase in the biotransformation of PAHs and biochemical effects of the phorbol ester tumor promoters and their implications for PAH carcinogenesis This volume consists of eight chapters and begins with a discussion on the mechanisms of PAH metabolism in the marine environment The use of X ray crystallographic techniques in studying carcinogenic PAHs and their derivatives is then considered along with the involvement of dihydrodiols and diol epoxides in the metabolic activation of PAHs other than benzo a pyrene the role of microsomal epoxide hydrolase in PAH biotransformation and drug detoxication in relation to the excretion mechanism of chemical carcinogens The following chapters focus on the anticarcinogenic or inhibitory effects of a variety of chemicals on PAH carcinogenesis the biochemical effects of the phorbol ester tumor promoters on PAH carcinogenesis and epidemiology of PAHs with emphasis on quantification of the cancer risk from cigarette smoking and air pollution This monograph will be of interest to investigators and educators concerned with scientific aspects of PAH research government officials and elected representatives as well as

industry leaders who must confront and solve the problems related to PAHs and others in the fields of chemistry biology and the medical and social sciences

Polycyclic Aromatic Hydrocarbons Ronald G. Harvey, 1997 A resurgence of interest in the chemistry of polycyclic aromatic hydrocarbons PAHs has been stimulated by the discovery of the fullerenes and the identification of the active metabolites of the carcinogenic polycyclic hydrocarbons PAHs are widespread environmental pollutants Improved understanding of their mechanisms of carcinogenesis has important implications for human cancer PAHs also are finding increasing application in the synthesis of dyes drugs and numerous other types of compounds This volume is a timely comprehensive survey of the chemistry of PAHs It brings together in a single volume all essential information on the physical and spectral properties methods of synthesis chemical reactions and molecular structures of a broad range of polyarenes both alternant and nonalternant A total of 358 ring systems are covered 233 of which are nonalternant PAH compounds This is the most complete account of the chemistry of PAHs currently available

Sulfur Analogues of Polycyclic Aromatic Hydrocarbons (Thiaarenes) Jürgen Jacob, 1990 First published in 1990 Sulfur containing polycyclic aromatic compounds thiaarenes play a potentially important role in environmentally induced cancers The main sources of these compounds being fossil fuels such as coal petroleum and shale oils from which they are released either directly or via combustion into the environment Information on the specific contribution of thiaarenes to the mutagenic and carcinogenic potencies of environmental matter is very limited but this book gives credit to new and exciting data in this field Our present knowledge of the occurrence chemical and physical properties analysis synthesis toxicology and biochemistry of the sulfur containing aromatic compounds is summarized in this volume The first half of the book covers all aspects of chemistry and carcinogenicity whilst the remainder summarizes information on the various thiaarene systems compound by compound This volume will provide a valuable source of reference for chemists toxicologists biologists and environmentalists working in cancer research institutes and universities and for research scientists working in the areas of pollution monitoring public health and fuel chemistry

Carcinogenesis Francisco Feo, Paolo Pani, 2013-11-11 About two centuries after the communication by Sir Percival Pott that the chimney sweeper disease was a cancer and its suggestion that active compounds of soot were the causative agents and about one century after the description of urinary bladder cancer in dye workers an enormous number of substances have been synthesized and have probably come into contact with man Research in cancer prevention is of primary importance and may receive continuous support from new discoveries on cancer etiology and pathogenesis If one accepts the multistage model of chemical carcinogenesis one has also to accept that many events occur between the contact of carcinogenic compounds and their specific targets and the development of a clinically recognizable neoplasm Thus animal studies become essential to elucidate the different steps by which chemical carcinogens induce neoplasia The analysis of these steps and the comparative evaluation of experimental models is essential to an understanding of pathogenesis
