Remote Sensing And Resource Exploration:

Remote Sensing and Geographic Information Systems Christopher Legg, 1992 This study opens with a look at the significance of remote sensing and geographic information systems in the mineral industry before moving on to briefly outline the basic concepts of remote sensing The author defines the role of geographic information systems GIS examining the synergistic importance of data integration Also covered are raster and vector based systems and problems of data input Examples of hardware and software are given and some case histories reviewed There is comprehensive coverage of current spaceborne and airborne systems and a review of systems that are still under development This section of the book closes with a discussion on what criteria to consider in choosing the right system for the job **Multispectral and Hyperspectral**

Remote Sensing Data for Mineral Exploration and Environmental Monitoring of Mined Areas Amin Beiranvand Pour, Basem Zoheir, Biswajeet Pradhan, Mazlan Hashim, 2021-09-01 In recent decades remote sensing technology has been incorporated in numerous mineral exploration projects in metallogenic provinces around the world Multispectral and hyperspectral sensors play a significant role in affording unique data for mineral exploration and environmental hazard monitoring This book covers the advances of remote sensing data processing algorithms in mineral exploration and the technology can be used in monitoring and decision making in relation to environmental mining hazard This book presents state of the art approaches on recent remote sensing and GIS based mineral prospectivity modeling offering excellent information to professional earth scientists researchers mineral exploration communities and mining companies *Remote Sensing in Mineral Exploration*, 1986 **Manual of Remote Sensing, Remote Sensing for the Earth Sciences** Andrew N. Rencz, Robert A. Ryerson, 1999-03-08 An outstanding new reference work REMOTE SENSING for the Earth Sciences Remote Sensing for the Earth Sciences is a comprehensive up to date resource for geologists geophysicists and all earth scientists Produced in cooperation with the American Society for Photogrammetry and Remote Sensing it is the third volume of the Manual of Remote Sensing Third Edition the widely accepted basic reference work in the field It brings together contributions from an international team of scientists active in remote sensing and earth sciences research The book is organized for quick access to topics of particular interest beginning with coverage of spectral characteristics that focuses on the theory of rock mineral soil and vegetation spectra as well as planetary geology The second section on data analysis is devoted to procedures used in information extraction and techniques used in the visual display of data particularly in the integration of various geospatial data The third section addresses applications of remote sensing in areas such as mineral and hydrocarbon exploration stratigraphic mapping engineering geology and environmental studies The final chapters offer a discussion of sensors relevant to the earth sciences including radar visible infrared and geophysical sensors along with case study examples Complete with color figures helpful illustrations and thorough references including Internet sources this volume is a major resource for researchers and practitioners working in the earth and environmental sciences *Remote*
