Renal Transplantation Theory And Practice:

Renal Transplantation Jean Hamburger, 1972 **Findings from the National Kidney Dialysis and Kidney Transplantation Study**, 1987 Manual of Vascular Access, Organ Donation, and Transplantation A.J. Henriksen, R.L. Simmons, M.E. Finch, N.L. Ascher, J.S. Najarian, 2012-12-06 This book is a compilation of common and uncommon surgical and ancillary techniques that we have found useful in the multiorgan transplantation program at the University of Minnesota. Descriptions of these techniques are not available at a single source elsewhere. Use the book as a teaching aid, a source of workable techniques, and as a reference for individuals with relatively little experience in a particular area of transplantation. Because of the varying levels of expertise of our readers, vascular access is described in exquisite detail as it is aimed at an audience of individuals who want to learn the fine points about how to prolong the function of shunts. The chapter on organ preservation is aimed at the surgeon or beginning technician who must learn how to do it from scratch, even the catalogue numbers of the necessary equipment are included. In contrast, the chapters on heart, liver, and pancreas transplantation, while omitting fine points of suture technique, concentrate on the essential principles and safeguards. Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique. The chapters on cadaver organ donation are perhaps the most innovative. They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation. We hope that the book will become available to centers that while not performing liver, pancreas, or heart transplants wish to serve as donation centers.

Current Catalog National Library of Medicine (U.S.), 1979 First multi-year cumulation covers six years 1965-70 **Renal transplantation (La Transplantation rénale, engl.) Theory and practice**, 1981 **International Yearbook of Nephrology 1991** V.E. Andreucci, Leon G. Fine, 2012-12-06 The 1991 International Yearbook of Nephrology is the third in a successful series which has as its principal aim the presentation of a comprehensive list of topics of the greatest current relevance to clinical nephrologists. We believe that by following the subjects covered by the Yearbook in the broad field of nephrology, the practicing nephrologist and nephrologist in training can stay abreast of a number of rapidly advancing fields. To improve the quality of the Yearbook, we have appointed an Editorial Board to provide suggestions for topics and authors. Thus we have invited 58 outstanding nephrologists from around the world; the list of them is included in this issue of the Yearbook to identify annually potential topics for the Yearbook. The reply was excellent and the contribution quite outstanding. Thus for the 1992 Yearbook we received more than 150 suggestions. A number of them will be included in the next issue if they continue to be viewed as current and important. We also invite readers to suggest topics for upcoming issues of the Yearbook. The present issue, the 1991 Yearbook, represents an improvement over previous volumes. We expect this trend to be maintained in future years. As in previous issues, all chapters provide a complete accurate and up-to-date list of important references. We are grateful to all the authors for their excellent contributions and for having fulfilled the

deadline in forwarding their manuscript Our special thanks to Kluwer Academic Publishers for the timely publication of this volume

MICHAEL F A WOODRUFF Emeritus Professor of Surgery University of Edinburgh This book grew out of a very successful conference on Organ Transplantation held in Kuwait in December 1982 The material presented at the conference has been expanded and brought up to date and the result is a well written and authoritative account of many aspects of organ transplantation by a distinguished team of contributors drawn from many countries A unique feature of the book is the account it contains of the development of organ transplantation in the Middle East Although as yet it has been virtually impossible in Islamic countries to take organs after death for use as transplants it is beginning to look as if this situation may change Meanwhile using living volunteer donors and a small number of cadaveric organs sent from other countries transplant teams in Kuwait and Turkey are obtaining results with kidney transplants which are as good in terms of both transplant survival and patient survival as those reported from acknowledged centres of excellence in the United States Europe and other countries where organ transplantation has been established for many years
