Fulford, 2011-03-23 Focusing on growth and decay processes interacting populations and heating cooling problems *Mathematical Modelling with Case Studies A Differential Equations Approach using Maple and MATLAB Second Edition* presents mathematical techniques applicable to models involving differential equations that describe rates of change Although the authors *Mathematical Modelling* Reinhard Illner, 2005 This is an ideal text for classes on modelling It can also be used in seminars or as preparation for mathematical modelling competitions **BOOK JACKET** **Mathematical Modelling** Ian Huntley, D. J. G. James, 1990 An important component of mathematical education at all levels the use of mathematics to model real world situation In this book the emphasis is on developing models which provide a means to analysis and answer questions posed in practical settings It provides a pendium of case studies of mathematical models of varying degrees of sophistication and practicality Teachers and students of mathematical modelling will find it a rich source of examples ranging from insulating houses to basketball and from modelling epidemics to studying the generation of windmill power *Mathematical Modeling* Ellis Cumberbatch, Alistair Fitt, 2001-10 This volume presents thirteen different case studies ranging from cooking of cereal to the analysis of epidemic waves in animal populations **Mathematical Modelling with Case Studies** B. Barnes, G..R. Fulford, 2014-12-15 *Mathematical Modelling with Case Studies Using Maple and MATLAB Third Edition* provides students with hands on modelling skills for a wide variety of problems involving differential equations that describe rates of change While the book focuses on growth and decay processes interacting populations and heating cooling problems the mathematical *Mathematical Modelling* J. Caldwell, Douglas K.S. Ng, 2004-03-31 Over the past decade there has been an increasing demand for suitable material in the area of mathematical modelling as applied to science engineering business and management Recent developments in computer technology and related software have provided the necessary tools of increasing power and sophistication which have significant implications for the use and role of mathematical modelling in the above disciplines In the past traditional methods have relied heavily on expensive experimentation and the building of scaled models but now a more flexible and cost effective approach is available through greater use of mathematical modelling and computer simulation In particular developments in computer algebra symbolic manipulation packages and user friendly software packages for large scale problems all have important implications in both the teaching of mathematical modelling and more importantly its use in the solution of real world problems Many textbooks have been published which cover the art and techniques of modelling as well as specific mathematical modelling techniques in specialist areas within science and business In most of these books the mathematical material tends to be rather tailor made to fit in with a one or two semester course for teaching students at the undergraduate or postgraduate level usually the former This textbook is quite different in that it is intended to build on and enhance students modelling skills using a combination of case studies and projects

**Case Studies in Mathematical Modelling** D. J. G. James, J. J. McDonald, 1981-01-01 Mathematical Modelling for Engineering and Physical Applications Mohd Mohd, Noor Ahmad, Syakila Ahmad, Md Yushalify Misro, Mohamad Hekarl Uzir, 2025-03-20 This edited volume from mathematical modelling experts employs a structured approach to showcase the latest research and provide a comprehensive guide to the principles techniques and practical applications of mathematical modelling in the fields of engineering and the physical sciences Readers will gain an insight into the fundamentals of mathematical modelling its application in engineering and the physical sciences recent advances in the field real world case studies and challenges and future directions in the field The book first introduces readers to the fundamentals of mathematical modelling including the definition scope and steps involved in the modelling process Mathematical tools and techniques relevant to modelling are explained The book then addresses the application of mathematical modelling in engineering and the physical sciences It covers various domains such as mechanical biomedical chemical computer and environmental engineering as well as green energy physics and other physical science applications Furthermore the book explores the integration of data driven approaches leveraging the power of big data and analytics to enhance modelling capabilities Through real life case studies readers gain practical insights into how mathematical modelling is applied in various industries and scientific disciplines These case studies analyse the modelling process challenges faced and outcomes achieved Readers will gain a solid foundation to develop effective mathematical models and apply them to solve complex engineering and physical problems This foundation will also enable them to tackle problems and make informed decisions in their own projects Finally readers will be able to anticipate and adapt to evolving technologies and stay ahead in their respective fields This book is a valuable resource primarily for undergraduate and graduate students seeking a comprehensive guide to this important discipline Researchers engineers and scientists will also benefit from the discussions within Overall the book empowers readers with the knowledge skills and practical insights to effectively apply mathematical modelling in engineering and the physical sciences **Mathematical Modelling with Case Studies** Belinda Barnes, 2009

**Mathematical Modelling with Case Studies** Belinda Barnes, Glenn Robert Fulford, 2002-07-25 Certain basic modeling skills can be applied to a wide variety of problems It focuses on those mathematical techniques which are applicable to models involving differential equations Models in three different areas are considered growth and decay process interacting populations and heating cooling problems The main mathematical technique is solving differential equations while the range of applications and mathematical techniques presented provides a broad appreciation of this type of modeling This book contains three general sections Compartmental Models Population Models and Heat Transfer Models Within each section the process of constructing a model is presented in full detail Applications and case studies are integral to this text and case studies are included throughout This is a useful course text and basic calculus and fundamental computing skills are required

**Mathematical Modelling** J. Caldwell, Y.M. Ram, 2013-06-29 Over the past decade there has been an increasing demand

for suitable material in the area of mathematical modelling as applied to science and engineering There has been a constant movement in the emphasis from developing proficiency in purely mathematical techniques to an approach which caters for industrial and scientific applications in emerging new technologies In this textbook we have attempted to present the important fundamental concepts of mathematical modelling and to demonstrate their use in solving certain scientific and engineering problems This text which serves as a general introduction to the area of mathematical modelling is aimed at advanced undergraduate students in mathematics or closely related disciplines e g students who have some prerequisite knowledge such as one variable calculus linear algebra and ordinary differential equations Some prior knowledge of computer programming would be useful but is not considered essential The text also contains some more challenging material which could prove attractive to graduate students in engineering or science who are involved in mathematical modelling In preparing the text we have tried to use our experience of teaching mathematical modelling to undergraduate students in a wide range of areas including mathematics and computer science and disciplines in engineering and science An important aspect of the text is the use made of scientific computer software packages such as MAPLE for symbolic algebraic manipulations and MATLAB for numerical simulation

**Exploring Mathematical Modeling in Biology Through Case Studies and Experimental Activities** Rebecca Sanft, Anne Walter, 2020-04-01 Exploring Mathematical Modeling in Biology through Case Studies and Experimental Activities provides supporting materials for courses taken by students majoring in mathematics computer science or in the life sciences The book's cases and lab exercises focus on hypothesis testing and model development in the context of real data The supporting mathematical coding and biological background permit readers to explore a problem understand assumptions and the meaning of their results The experiential components provide hands on learning both in the lab and on the computer As a beginning text in modeling readers will learn to value the approach and apply competencies in other settings Included case studies focus on building a model to solve a particular biological problem from concept and translation into a mathematical form to validating the parameters testing the quality of the model and finally interpreting the outcome in biological terms The book also shows how particular mathematical approaches are adapted to a variety of problems at multiple biological scales Finally the labs bring the biological problems and the practical issues of collecting data to actually test the model and or adapting the mathematics to the data that can be collected
