## **Mathematics As An Educational Task:**

*Mathematics as an Educational Task* Hans Freudenthal, 2012-12-06 Like preludes prefaces are usually composed last Putting them in the front of the book is a feeble reflection of what in the style of mathematics treatises and textbooks I usually call the didactical inversion to be fit to print the way to the result should be the inverse of the order in which it was found in particular the key definitions which were the finishing touch to the structure are put at the front For many years I have contrasted the didactical inversion with the thought experiment It is true that you should not communicate your mathematics to other people in the way it occurred to you but rather as it could have occurred to you if you had known then what you know now and as it would occur to the student if his learning process is being guided This in fact is the gist of the lesson Socrates taught Meno's slave The thought experiment tries to find out how a student could re-invent what he is expected to learn I said about the preface that it is a feeble reflection of the didactical inversion Indeed it is not a constituent part of the book It can even be torn out Yet it is useful Firstly to the reviewer who then need not read the whole work and secondly to the author himself who like the composer gets an opportunity to review the Leitmotifs of the book

*Mathematics as an Educational Task* M. Freudenthal, 1973      **Task Design In Mathematics Education** Anne Watson, Minoru Ohtani, 2015-10-26 THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK This open access book is the product of ICMI Study 22 Task Design in Mathematics Education The study offers a state of the art summary of relevant research and goes beyond that to develop new insights and new areas of knowledge and study about task design The authors represent a wide range of countries and cultures and are leading researchers teachers and designers In particular the authors develop explicit understandings of the opportunities and difficulties involved in designing and implementing tasks and of the interfaces between the teaching researching and designing roles recognising that these might be undertaken by the same person or by completely separate teams Tasks generate the activity through which learners meet mathematical concepts ideas strategies and learn to use and develop mathematical thinking and modes of enquiry Teaching includes the selection modification design sequencing installation observation and evaluation of tasks The book illustrates how task design is core to effective teaching whether the task is a complex extended investigation or a small part of a lesson whether it is part of a curriculum system such as a textbook or promotes free standing activity whether the task comes from published source or is devised by the teacher or the student      **Weeding and Sowing** Hans Freudenthal, 2007-05-08 A title that sounds like poetry and a subtitle that seems to contradict the title But the subtitle is right and originally it was just the title A strange subtitle isn't it Preface to a Science of Mathematical Education All sciences in their prenatal stage have known this kind of literature only the term used was not Preface but for instance Prolegomena which means the same though it sounds less provisional In fact such works were thicker than the present one by up to ten times There is much more that can be said about a science before it comes into being than after with the first results comes modesty This is the preface to a

book that will never be written not by me nor by anybody else Once a science of mathematical education exists it will get the preface it deserves Nevertheless this preface or what for honesty's sake I have labelled so must fulfil a function the function of accelerating the birth of a science of mathematical education which is seriously impeded by the unfounded view that such already exists Against this view I have to argue it rests on a wrong estimation both over and under estimation at the same time of what is to be considered as science

### **Mathematics Education as a Research Domain: A Search for Identity**

Anna Sierpinska, Jeremy Kilpatrick, 2013-03-14 No one disputes how important it is in today's world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives That task is very difficult however Refocusing curricula on fundamental concepts producing new teaching materials and designing teaching units based on mathematicians' common sense or on logic have not resulted in a better understanding of mathematics by more students The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals designs and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally politically and economically justified institutions namely schools Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology sociology and mathematics Psychological theories focus on the individual learner Theories of sociology of education look at the general laws of curriculum development the specifics of pedagogic discourse as opposed to scientific discourse in general the different possible pedagogic relations between the teacher and the taught and other general problems in the interface between education and society Mathematics aside from its theoretical contents can be looked at from historical and epistemological points of view clarifying the genetic development of its concepts methods and theories This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts

### **All Positive Action Starts with Criticism**

Sacha la Bastide-van Gemert, 2015-01-16 This study provides a historical analysis of Freudenthal's didactic ideas and his didactic career It is partly biographical but also contributes to the historiography of mathematics education and addresses closely related questions such as what is mathematics and where does it start Which role does mathematics play in society and what influence does it have on the prevailing views concerning its accompanying didactics Hans Freudenthal 1905-1990 professor in mathematics scientist literator but above all mathematics educator was inextricably linked to the changes which took place in mathematics education and didactics during the second half of the last century His diversity as a scientist and his inexhaustible efforts to establish the didactics of mathematics as a seriously pursued science made Freudenthal's influence in this area considerable He foresaw an essential practical role for mathematics in everyone's life encouraging students to discover and create mathematics themselves instead of imposing a ready-made mathematical system The theory of mathematics education thus developed in the Netherlands would gain world fame in the following decades Today in the light of the discussions about mathematics education in which the call for genuine

mathematics instead of the so called kindergarten mathematics can be heard Freudenthal's approach seems to be pass. However the outcome of this study which is mainly based on documents from Freudenthal's vast personal archive shows a more refined picture. The direct identification of kindergarten mathematics with Freudenthal's view on mathematics education is not justified. Realistic mathematics as advocated by Freudenthal includes more than just a practical introductory and should among other things always aim at teaching genuine mathematics in the end. **Lines of Inquiry in**

**Mathematical Modelling Research in Education** Gloria Ann Stillman, Jill P. Brown, 2019-05-16 This open access book is based on selected presentations from Topic Study Group 21 Mathematical Applications and Modelling in the Teaching and Learning of Mathematics at the 13th International Congress on Mathematical Education ICME 13 held in Hamburg Germany on July 24-31 2016. It contributes to the theory research and teaching practice concerning this key topic by taking into account the importance of relations between mathematics and the real world. Further the book addresses the balancing act between developing students modelling skills on the one hand and using modelling to help them learn mathematics on the other which arises from the integration of modelling into classrooms. The contributions prepared by authors from 9 countries reflect the spectrum of international debates on the topic and the examples presented span schooling from years 1 to 12 teacher education and teaching modelling at the tertiary level. In addition the book highlights professional learning and development for in-service teachers particularly in systems where the introduction of modelling into curricula means reassessing how mathematics is taught. Given its scope the book will appeal to researchers and teacher educators in mathematics education as well as pre-service teachers and school and university educators. *International Perspectives on the Teaching and Learning of Geometry in Secondary Schools* Patricio Herbst, Ui Hock Cheah, Philippe R. Richard, Keith Jones, 2018-04-27 This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools. It contains chapters contributing to three main areas. A first set of chapters examines mathematical epistemological and curricular perspectives. A second set of chapters presents studies on geometry instruction and teacher knowledge and a third set of chapters offers studies on geometry thinking and learning. Specific research topics addressed also include teaching practice learning trajectories learning difficulties technological resources instructional design assessments textbook analyses and teacher education in geometry. Geometry remains an essential and critical topic in school mathematics. As they learn geometry students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world. Geometry has traditionally been included as a subject of study in secondary mathematics curricula but it has also featured as a resource in out of school problem solving and has been connected to various human activities such as sports games and artwork. Furthermore geometry often plays a role in teacher preparation undergraduate mathematics and at the workplace. New technologies including dynamic geometry software computer assisted design software and geometric positioning systems

have provided more resources for teachers to design environments and tasks in which students can learn and use geometry. In this context, research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers' decision making.

*The Evolution of Research on Teaching Mathematics* Agida Manizade, Nils Buchholtz, Kim Beswick, 2023-08-10. This open access book investigates current issues related to the evolution of research on teaching mathematics and examines up to thirty years of presage process product research (PPPR) in mathematics with respect to conceptualization, instrumentation, and design. The book discusses the theoretical and methodological challenges associated with PPPR, critically reviews current research, and explores the likely direction of further developments to identify future paths for research on high quality mathematics teaching in the digital era. Subjects that are covered in this work focus on the relationships between: 1. student learning outcomes measured upon completion of the mathematics teaching; 2. student learning activities in the classroom; 3. interactive mathematics teacher activities and best practices in mathematics classrooms conducted in the presence of students; 4. pre-post active mathematics teacher activities such as planning, assessment, and other teaching related activities outside of the classroom; 5. mathematics teachers' competencies, knowledge, and skills; and 6. mathematics teachers' characteristics including beliefs, attitudes, and motivation. This book discusses the evolution of such research in mathematics teaching and teacher education in the digital era and is of interest to researchers exploring the field of mathematics teaching and mathematics teacher education as well as educators.

**Teaching Mathematics in Secondary Schools** Linda Haggarty, 2013-09-13. A companion to *Aspects of Teaching Secondary Mathematics*, this book introduces and explores the contemporary issues and key ideas entailed in the teaching and learning of this subject. This book is concerned with exploring the bigger picture of mathematics education and is aimed particularly at those learning to teach mathematics teachers in the classroom who want to continue thinking and developing as mathematics teachers and those concerned with education who would like to be better informed about mathematics education. Divided into seven sections to help structure reading, this book offers a completely up to date comprehensive overview written by the most known well respected experts in the field.

*Disciplinary and Interdisciplinary Education in STEM* Yeping Li, Zheng Zeng, Naiqing Song, 2024-03-19. This book provides an international platform for educators from different STEM disciplines to present, discuss, connect, and develop collaborations in two inter-related ways: 1. sharing and discussing changes and innovations in individual discipline based education in STEM, STEAM, and 2. sharing and discussing the development of interdisciplinary STEM/STEAM education. Possible relationships and connections between individual disciplines like mathematics or physics and STEM education remain under-explored, and the integration of traditionally individual discipline based education in STEM education is far from balanced. Efforts to pursue possible connections among traditionally separated individual disciplines in STEM are not only necessary for the importance of deepening and expanding

interdisciplinary research and education in STEM but also for the ever increasing need of reflecting on and changing how traditional school subjects like mathematics or physics can and should be viewed taught and learned Scholars from eight countries regions provide diverse perspectives and approaches on changes and innovations in STEM disciplinary and interdisciplinary education Disciplinary and Interdisciplinary Education in STEM will be a great resource to students and researchers in STEM education as well as STEM curriculum developers and teacher educators internationally
