Mathematics Exploring Your World Grade 4 Grade 4:

Many Visions, Many Aims W.H. Schmidt, Curtis C. McKnight, Gilbert Valverde, Richard T. Houang, David E. Wiley, 1997-02-28 PREFACE The Third International Mathematics and Science Study TIMSS sponsored by the International Association for the Evaluation of Educational Achievement IEA and the governments of the participating countries is a comparative study of education in mathematics and the sciences conducted in approximately 50 educational systems on five continents The goal of TIMSS is to measure student achievement in mathematics and science in participating countries and to assess some of the curricular and classroom factors that influence student learning in these subjects The study will provide educators and policy makers with an unparalleled and multidimensional perspective on mathematics and science curricula their implementation the nature of student performance in mathematics and science and the social economic and educational context in which these occur TIMSS focuses on student learning and achievement in mathematics and science at three different age levels or populations Population 1 is defined as all students enrolled in the two adjacent grades that contain the largest proportion of 9 year old students Population 2 is defined as all students enrolled in the two adjacent grades that contain the largest proportion of 13 year old students and Population 3 is defined as all students in their final year of secondary education including students in vocational education programs In addition Population 3 has two specialist subpopulations students taking advanced courses in mathematics mathematics specialists and students taking advanced courses in physics science specialists

A Splintered Vision W.H. Schmidt, Curtis C. McKnight, S. Raizen, 2007-05-08 A Splintered Vision An Investigation of U S Science and Mathematics Education is the US report on the curriculum analysis component of the Third International Mathematics and Science Study TIMSS which was sponsored by the International Association for the Evaluation of Educational Achievement IEA The report summarizes data from the TIMSS curriculum analysis and integrates it with teacher questionnaire data from the US Japan and Germany on science and mathematics topic coverage and instructional practices The authors of A Splintered Vision discuss and provide evidence of the unfocused nature of US mathematics and science curricular intentions textbooks and teacher practices They offer the premise that producers of US textbooks and curriculum guides have attempted to answer calls for curricular reform by adding new content to already existing materials instead of devoting time to restructuring the materials The authors also suggest that US teachers inundated with a myriad of competing visions are attempting to cover all the topics they confront in their resource documents and to meet all the instructional demands placed on them by those with a stake in education In keeping with the incremental assembly line philosophy in American society US teachers also tend to lean toward a piecemeal approach to education The authors speculate on what such practices may mean for the mathematics and science achievement of US students The work is sure to spur discussion among educational researchers policy makers and others concerned about the future of mathematics and science education in the US
