**Aging** David R. Riddle, 2007-04-19 Recognition that aging is not the accumulation of disease but rather comprises fundamental biological processes that are amenable to experimental study is the basis for the recent growth of experimental biogerontology As increasingly sophisticated studies provide greater understanding of what occurs in the aging brain and how these changes occur **Biological Electron Microscopy** Michael J. Dykstra, Laura E. Reuss, 2011-06-28 Electron microscopy is frequently portrayed as a discipline that stands alone separated from molecular biology light microscopy physiology and biochemistry among other disciplines It is also presented as a technically demanding discipline operating largely in the sphere of black boxes and governed by many absolute laws of procedure At the introductory level this portrayal does the discipline and the student a disservice The instrumentation we use is complex but ultimately understandable and more importantly repairable The procedures we employ for preparing tissues and cells are not totally understood but enough information is available to allow investigators to make reasonable choices concerning the best techniques to apply to their particular problems There are countless specialized techniques in the field of electron and light microscopy that require the acquisition of specialized knowledge particularly for interpretation of results electron tomography and energy dispersive spectroscopy immediately come to mind but most laboratories possessing the equipment to effect these approaches have specialists to help the casual user The advent of computer operated electron microscopes has also broadened access to these instruments allowing users with little technical knowledge about electron microscope design to quickly become operators This has been a welcome advance because earlier instruments required a level of knowledge about electron optics and vacuum systems to produce optimal photographs and to avoid crashing the instruments that typically made it difficult for beginners **Interpreting Silent Artefacts: Petrographic Approaches to Archaeological Ceramics** Patrick Sean Quinn, 2010-01-15 This volume presents a range of petrographic case studies as applied to archaeological problems primarily in the field of pottery analysis i.e. ceramic petrography **Handbook of Biological Confocal Microscopy** James

A renaissance in fluorescence has occurred driven by the development of new probes, new microscopes, live imagers and computer processing. The introduction of new markers has enormously stimulated the field, moving it from tissue culture to neurophysiology to functional MRI techniques.

**Trends in Fisheries and Aquatic Animal Health** Panagiotis Berillis, 2017-11-11 Fish and other seafood have always been considered as an important part of human diet and have also long been recognized as a health promoting food for human nutrition. However, managing aquatic food resources remains a challenge as the human population is expanding and overfishing poses a threat to fishing reserves in several areas. Aquaculture is the alternative solution for food production from the sea. According to the FAO, aquaculture is probably the fastest growing food producing sector and can be a sustainable solution for fish production. In order to maximize marine food production and achieving sustainable management of the aquatic environment, knowledge about aspects of fisheries and aquatic animal health is very important. Trends in Fisheries and Aquatic Animal Health covers some basic and applied topics in fishery management and fish health with a focus on European regions. The textbook is a combination of reviews and research articles. Topics covered in the book include challenges in fishery management, environmental impacts on fisheries, fish health, pharmacology, histopathology, stress response, telemetry, techniques in fisheries research and specific case studies of regional marine species in localized fisheries. This textbook is a useful resource for graduates and professionals involved in advanced training courses for aquaculture and fishery management.
