Geographical Education Judith A. Tyner, 2016-12-05 From the late eighteenth century until about 1840 schoolgirls in the British Isles and the United States created embroidered map samplers and even silk globes Hundreds of British maps were made and although American examples are more rare they form a significant collection of artefacts Descriptions of these samplers stated that they were designed to teach needlework and geography The focus of this book is not on stitches and techniques used in drafting the maps but rather why they were developed how they diffused from the British Isles to the United States and why they were made for such a brief time The events of the late eighteenth and early nineteenth centuries stimulated an explosion of interest in geography The American and French Revolutions the wars between France and England the War of 1812 Captain Cook's voyages and the explorations of Lewis and Clark made the study of places exciting and important Geography was the first science taught to girls in school This period also coincided with major changes in educational theories and practices especially for girls and this book uses needlework maps and globes to chart a broader discussion of women's geographic education In this light map samplers and embroidered globes represent a transition in women's education from accomplishments in the eighteenth century to challenging geographic education and conventional map drawing in schools and academies of the second half of the nineteenth century There has been little serious study of these maps by cartographers and moreover historians of cartography have largely neglected the role of women in mapping Children's maps have not been studied although they might have much to offer about geographical teaching and perceptions of a period and map samplers have been dismissed because they are the work of schoolgirls Needlework historians likewise have not done in depth studies of map samplers until recently *Stitching the World* is an interdisciplinary work drawing on cartography needlework and material culture This book for the first time provides a critical analysis of these artefacts showing that they offer significant insights into both eighteenth and nineteenth century geographic thought and cartography in the USA and the UK and into the development of female education

Fascinating panoramic wonderful Tom Holland A magical book which explores how the world was seen at twelve points in history through twelve extraordinary maps and the minds of those who made them What you see depends on where and when you are looking from As Jerry Brotton s enthralling book shows maps have shaped our view of the world throughout history and are themselves shaped by the ideas prejudices systems of power and creativity of their age Brotton examines twelve world maps from global history from the mystical representations of ancient civilizations and the fourteenth century Mappamundi to the satellite derived imagery of today to show how by reading them we can better understand the worlds that produced them You will not look at a map in quite the same way again The intellectual background to these images is conveyed with beguiling erudition maps prove to be less conveyors of information than theatrical performances There is nothing more subversive than a map Andrew Linklater Spectator Fascinating and thought provoking An achievement of evocation Anthony Sattin Literary Review Elegant powerfully argued David Horspool Guardian Books of the Year Rich and adventurous John Carey Sunday Times A highly rewarding study you will emerge with a detailed insight into how maps reflect expose and manipulate the societies in which they are made Simon Garfield Mail on Sunday A History of the World in 12 Maps Jerry Brotton,2013-11-14 A New York Times Bestseller Maps allow the armchair traveler to roam the world the diplomat to argue his points the ruler to administer his country the warrior to plan his campaigns and the propagandist to boost his cause rich and beautiful Wall Street Journal Throughout history maps have been fundamental in shaping our view of the world and our place in it But far from being purely scientific objects maps of the world are unavoidably ideological and subjective intimately bound up with the systems of power and authority of particular times and places Mapmakers do not simply represent the world they construct it out of the ideas of their age In this scintillating book Jerry Brotton examines the significance of 12 maps from the almost mystical representations of ancient history to the satellite derived imagery of today He vividly recreates the environments and circumstances in which each of the maps was made showing how each conveys a highly individual view of the world Brotton shows how each of his maps both influenced and reflected contemporary events and how by considering it in all its nuances and omissions we can better understand the world that produced it Although the way we map our surroundings is more precise than ever before Brotton argues that maps today are no more definitive or

objective than they have ever been Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again A fascinating and panoramic new history of the cartographer's art The Guardian The intellectual background to these images is conveyed with beguiling erudition There is nothing more subversive than a map The Spectator A mesmerizing and beautifully illustrated book The Telegraph *Collections of Maps and Atlases in the Netherlands* Ir C. Koeman, 1961 **Cartography** Matthew H. Edney, 2019-04-12 In his most ambitious work to date Edney questions the very concept of cartography to argue that this flawed ideal has hobbled the study of maps Susan Schulten author of *A History of America in 100 Maps* Over the past four decades the volumes published in the landmark History of Cartography series have both chronicled and encouraged scholarship about maps and mapping practices across time and space As the current director of the project that has produced these volumes Matthew H Edney has a unique vantage point for understanding what cartography has come to mean and include In this book Edney disavows the term cartography rejecting the notion that maps represent an undifferentiated category of objects for study Rather than treating maps as a single unified group he argues scholars need to take a processual approach that examines specific types of maps sea charts versus thematic maps for example in the context of the unique circumstances of their production circulation and consumption To illuminate this bold argument Edney chronicles precisely how the ideal of cartography that has developed in the West since 1800 has gone astray By exposing the flaws in this ideal his book challenges everyone who studies maps and mapping practices to reexamine their approach to the topic The study of cartography will never be the same An intellectually bracing and marvellously provocative account of how the mythical ideal of cartography developed over time and in the process distorted our understanding of maps Times Higher Education Cartography The Ideal and Its History offers both a sharp critique of current practice and a call to reorient the field of map studies A landmark contribution K ren Wigen coeditor of *Time in Maps* *The Earliest Printed Maps, 1472-1500* Tony Campbell, 1987
