2D Electrical Imaging Assessment for Geotropical Region Issues (Penerbit USM) Rosli Saad, Muhammad Sabiu Bala, 2019-10-30. This book aims to impart knowledge on tropical climate towards engineering and environmental field and 2D resistivity method in general. It is written in its simplest way, illustrated by examples and illustrations to enhance readers' understanding of the general concepts and governing theories relating to electrical methods and how they are applied to solve problems affecting the subsurface of the tropical regions. The discussion centres around the common problems of detection using geophysical method of 2D resistivity, reliability of the method to depict the subsurface and solutions to overcome the problems related to tropical region. Examples of 2D resistivity survey in various fields were presented in this book, including structural geology, groundwater exploration, mineral prospecting and quarry management. Others are seawater intrusion, land subsidence, geoengineering and environmental hazards. This book is suitable as a reference and companion to geophysics students, professional geophysicists, geologists and civil engineers, as well as personnel involved in subsurface electrical works.

The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20. Co-published with British Society for Geomorphology. This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology. Volume 1 (1964) dealt with contributions to the field up to 1890. Volume 2 (1973) with the concepts and contributions of William Morris Davis. Volume 3 (1991) covered historical and regional themes during the classic period of geomorphology (1890-1950). Volume 4 (2008) concentrated on studies of geomorphological processes and Quaternary

geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms The volume s objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century geomorphology

Human Activities and the Tropical Rainforest Bernard K. Maloney, 2013-11-11 Arising initially from a conference the papers published here have been integrated into book form to provide information on human activities and the tropical rainforest in the past and present and on the possible future of the rainforest in a unique way Other books have considered some but not all of these themes however none has stressed the continuity of change over time and its possible outcome for the people of the forest as well as for the forest itself Because of the approach taken this book should appeal across traditional disciplinary boundaries Indeed a prime aim has been to suggest that rainforest because of its complexity and the complexity of people rainforest relationships throughout time deserves study from a broad perspective This book poses more questions than answers about the rainforest and it is hoped that it will encourage readers to think about the rainforest in a wider way than hitherto This book is aimed at geographers physical and human social anthropologists archaeologists pedologists foresters and tropical botanists and will be of value to graduates of various disciplines setting out to research the rainforest

Rocks and Landforms John Gerrard, 2012-12-06 Geomorphology can be defined simply as the study of landforms Landforms are the result of the interaction between what Ritter 1978 has called the driving and resisting forces The driving forces or processes are the methods by which energy is exerted on earth materials and include both surface geomorphological or exogenous processes and subsurface geological or endogenous processes The resisting forces are the surface materials with their inherent resistances determined by a complex combination of rock properties Stated in these simple terms it would be expected that both sides of the equation be given equal weight in syntheses of landform evolution However this has not been the case Until about the 1950s geomorphology was mainly descriptive and concerned with producing time dependent models of landscape evolution Although the form of the land was the main focus there was little detailed mention of process and scant attention to the properties of surface materials There were of course exceptions In the late 19th century G K Gilbert was stressing the equilibrium between landforms and processes Many hydrologists were examining the detailed workings of river systems and drainage basins culminating in the classic paper of Horton 1945

The Periglacial Environment Hugh

M. French, 2017-10-27 The Periglacial Environment Fourth Edition is an authoritative overview of the world's cold non-glacial environments. First published in 1976 and subsequently revised in 1996 and 2007, the text has been the international standard for nearly 40 years. The Fourth Edition continues to be a personal interpretation of the frost-induced conditions, geomorphic processes, and landforms that characterize periglacial environments. Part One discusses the periglacial concept and describes the typical climates and ecosystems that are involved. Part Two describes the geocryology/permafrost science associated with frozen ground. Part Three outlines the weathering and geomorphic processes associated with cold climate conditions. Part Four provides insight into the periglacial environments of the Quaternary, especially the Late Pleistocene. Part Five describes some of the problems associated with human occupancy in regions that experience frozen ground and cold climate conditions. Extensively revised and updated. Written by an expert with over 50 years of field research. Draws upon the author's personal experience from Northern Canada, Alaska, Siberia, Tibet, Antarctica, Svalbard, Scandinavia, southern South America, Western Europe, and eastern North America. This book is an invaluable reference for advanced undergraduates in geography, geology, earth sciences, and environmental sciences programs and to resource managers and geotechnical engineers interested in cold regions.
